Date Filed	#	Docket Text
01/20/2022	<a href="#">1</a>	COMPLAINT against Meta Platforms, Inc. f/k/a Facebook, Inc., Snap, Inc. with jury demand (Filing Fee \$402 receipt number ACANDC-16824504) . Filed by Tammy Rodriguez. (Attachments: # <a href="#">1</a> Civil Cover Sheet)(Anderson, Jennie) (Filed on 1/20/2022) Modified on 1/21/2022 (anj, COURT STAFF). Modified on 1/21/2022 (jml, COURT STAFF). (Entered: 01/20/2022)
01/20/2022	<a href="#">2</a>	Proposed Summons. (Anderson, Jennie) (Filed on 1/20/2022) (Entered: 01/20/2022)
01/21/2022	3	Case assigned to Magistrate Judge Sallie Kim.  Counsel for plaintiff or the removing party is responsible for serving the Complaint or Notice of Removal, Summons and the assigned judge's standing orders and all other new case documents upon the opposing parties. For information, visit <i>E-Filing A New Civil Case</i> at <a href="http://cand.uscourts.gov/ecf/caseopening">http://cand.uscourts.gov/ecf/caseopening</a> .  Standing orders can be downloaded from the court's web page at <a href="http://www.cand.uscourts.gov/judges">www.cand.uscourts.gov/judges</a> . Upon receipt, the summons will be issued and returned electronically. A scheduling order will be sent by Notice of Electronic Filing (NEF) within two business days. Consent/Declination due by 2/4/2022. (anj, COURT STAFF) (Filed on 1/21/2022) (Entered: 01/21/2022)
01/21/2022	<a href="#">4</a>	Summons Issued as to Meta Platforms, Inc. f/k/a Facebook, Inc., Snap, Inc.. (jml, COURT STAFF) (Filed on 1/21/2022) (Entered: 01/21/2022)
01/21/2022	<a href="#">5</a>	<b>Initial Case Management Scheduling Order with ADR Deadlines: Case Management Statement due by 4/18/2022. Initial Case Management Conference set for 4/25/2022 01:30 PM in San Francisco, Courtroom C, 15th Floor. (jml, COURT STAFF) (Filed on 1/21/2022) (Entered: 01/21/2022)</b>
01/26/2022	<a href="#">6</a>	CONSENT/DECLINATION to Proceed Before a US Magistrate Judge by Tammy Rodriguez.. (Anderson, Jennie) (Filed on 1/26/2022) (Entered: 01/26/2022)
01/26/2022	7	CLERK'S NOTICE OF IMPENDING REASSIGNMENT TO A U.S. DISTRICT COURT JUDGE: The Clerk of this Court will now randomly reassign this case to a District Judge because either (1) a party has not consented to the jurisdiction of a Magistrate Judge, or (2) time is of the essence in deciding a pending judicial action for which the necessary consents to Magistrate Judge jurisdiction have not been secured. You will be informed by separate notice of the district judge to whom this case is reassigned.  ALL HEARING DATES PRESENTLY SCHEDULED BEFORE THE CURRENT MAGISTRATE JUDGE ARE VACATED AND SHOULD BE RE-NOTICED FOR HEARING BEFORE THE JUDGE TO WHOM THIS CASE IS REASSIGNED.  <i>This is a text only docket entry; there is no document associated with this notice.</i> (mkl, COURT STAFF) (Filed on 1/26/2022) (Entered: 01/26/2022)
01/27/2022	<a href="#">8</a>	<b>ORDER REASSIGNING CASE. Case reassigned using a proportionate, random, and blind system pursuant to General Order No. 44 to Judge James Donato for all further proceedings. Magistrate Judge Sallie Kim no longer assigned to case, Notice: The assigned judge participates in the Cameras in the Courtroom Pilot Project. See General Order No. 65 and <a href="http://cand.uscourts.gov/cameras">http://cand.uscourts.gov/cameras</a>.. Signed by Clerk on 01/27/2022. (Attachments: # <a href="#">1</a> Notice of Eligibility for Video Recording)(mbc, COURT STAFF) (Filed on 1/27/2022) (Entered: 01/27/2022)</b>

JURY DEMAND

1 In these digital public spaces, which are privately owned and tend to be run for profit,  
2 there can be tension between what's best for the technology company and what's best  
3 for the individual user or for society. Business models are often built around  
4 maximizing user engagement as opposed to safeguarding users' health and ensuring  
5 that users engage with one another in safe and healthy ways. . . . Technology  
6 companies must step up and take responsibility for creating a safe digital environment  
7 for children and youth. Today, most companies are not transparent about the impact  
8 of their products, which prevents parents and young people from making informed  
9 decisions and researchers from identifying problems and solutions.

10 *Protecting Youth Mental Health*, United States Surgeon General Advisory, December 7, 2021

11 Plaintiff Tammy Rodriguez, individually and as the Personal Representative of the Estate  
12 of Selena Rodriguez, brings this action against Meta Platforms, Inc., formerly known as Facebook,  
13 Inc. ("Meta"), doing business as Instagram ("Instagram"), Snap, Inc., doing business as Snapchat  
14 ("Snapchat"), TikTok, Inc. and ByteDance, Inc. (collectively, "TikTok") and alleges as follows:

## 15 I. INTRODUCTION

16 1. This product liability action seeks to hold Defendants' products responsible for  
17 causing and contributing to the burgeoning mental health crisis perpetrated upon the children and  
18 teenagers of the United States by Defendants and, specifically, for the wrongful death of 11-year-  
19 old Selena Rodriguez caused by her addictive use of and exposure to Defendants' unreasonably  
20 dangerous and defective social media products. On July 21, 2021, after struggling with the harmful  
21 effects of social media, Selena took her own life.

22 2. Selena Rodriguez's death was a symptom of the current mental health crisis among  
23 American youth caused by social media. On December 7, 2021, the United States Surgeon General  
issued an advisory cataloging a dramatic increase in teen mental health crises including suicides,  
attempted suicides, eating disorders, anxiety, depression, self-harm, and inpatient admissions.  
Between 2007 and 2018, for example, suicide rates among youth ages twelve to sixteen in the U.S.  
increased a staggering 146 percent!

1           3.       The most significant and far-reaching change to the lives of young people during  
2 this period was the widespread adoption of mobile social media platforms, most prominently the  
3 Instagram, Snapchat, and TikTok products designed and distributed by Defendants. By 2014, 80  
4 percent of high school students said they used a social media platform daily, and 24 percent said  
5 that they were online “almost constantly.” Millions of children and teenagers spend hours  
6 throughout the day and night using Defendants’ unreasonably dangerous and defective social  
7 media products.

8           4.       Peer reviewed studies and the available medical science have identified social  
9 media use associated with major mental health injuries among youth, including depression, self-  
10 harm, eating disorders, suicide attempts and ideation, dissatisfaction with life, depression, and  
11 sleep deprivation. Both large observational studies and experimental results point to the heavy use  
12 of Defendants’ social media products as a cause of increased depression, suicidal ideation, and  
13 sleep deprivation among minors, particularly teenage girls.

14           5.       Defendants’ own research also points to their social media products as a cause of  
15 increased depression, suicidal ideation, sleep deprivation, and other serious harms. Meta  
16 researchers, for example, found that Instagram is “worse” than many competitor products and “is  
17 seen as having the highest impact [on negative body and appearance comparison], although  
18 TikTok and Snapchat aren’t far behind.”

19           6.       Defendants have invested billions of dollars to intentionally design and develop  
20 their products to encourage, enable, and push content to children and teenagers that Defendants  
21 know to be problematic and highly detrimental to their minor users’ mental health.

22           7.       Internal, non-public data collected by Instagram and Facebook reveal large  
23 numbers of its users are engaging in “problematic use” of its products. This problematic use

identified in the medical literature is precisely the type of use Defendants have designed their products to encourage through psychological manipulation techniques—sometimes referred to as persuasive design—that is well-recognized to cause all the hallmarks of clinical addiction.

8. Likewise, each of Defendants’ products contains unique product features which are intended to and do encourage addiction, and unlawful content and use of said products, to the detriment of Defendants’ minor users.

9. Plaintiff brings claims of strict liability based upon Defendants’ defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minor users in particular. It is technologically feasible to design social media products that substantially decrease both the incidence and magnitude of harm to minors arising from their foreseeable use of Defendants’ products with a negligible increase in production cost.

10. Plaintiff also brings claims for strict liability based on Defendants’ failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms and sexual abuse arising from foreseeable use of their social media products. The addictive quality of Defendants’ products and the impacts of their harmful algorithms are unknown to minor users and their parents.

11. Plaintiff also brings claims for common law negligence arising from Defendants’ unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew, or in the exercise of ordinary care should have known, that their social media products were harmful to a significant percentage of their minor users and failed to redesign their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products.

12. Many of Defendants’ own former and/or current developers do not allow their own

1 children and teenagers to use Defendants' products. For many years, Defendants have had actual  
2 knowledge that their social media products are dangerous and harmful to children and teenagers,  
3 but actively concealed these facts from the general public and government regulators and failed to  
4 warn parents about this known harm for continued economic gain.

5 13. Plaintiff brings claims under California's Unfair Competition Law ("UCL"), Cal.  
6 Bus. & Prof. Code, §§17200, *et seq.* The conduct and omissions alleged herein constitute unlawful,  
7 unfair, and/or fraudulent business practices prohibited by the UCL.

8 14. Finally, Plaintiff brings claims under 47 U.S.C. § 1595 based on Defendants'  
9 financial benefit derived from knowingly assisting, supporting, and facilitating the sexual  
10 solicitation and exploitation of Selena Rodriguez and similarly situated children. Defendants have  
11 actual knowledge of, and knowingly benefit from, the large number of adult predators who  
12 regularly use Defendants' platforms to solicit and groom minor users to engage in commercial sex  
13 acts with minors

14 15. Defendants have actual knowledge that adult predators use their social media  
15 platforms to facilitate commercial sex acts, yet have purposefully failed to undertake reasonable  
16 efforts to redesign their social media products to protect minor users such as Selena Rodriguez  
17 from sex abuse; failed to warn minor users and their parents that sexual predators are using their  
18 platforms to recruit minors to perform commercial sex acts; and failed to notify law enforcement  
19 despite knowledge of illegal sex acts performed on and through their platforms.

## 20 II. PARTIES

21 16. Plaintiff Tammy Rodriguez is an individual residing in Enfield, Connecticut, and  
22 has been appointed the administrator of the Estate of her daughter Selena Rodriguez, who died of  
23 suicide on July 21, 2021.

19. Defendant Snap, Inc. is a Delaware corporation with its principal place of business in Santa Monica, CA. Defendant Snap owns and operates the Snapchat social media platform, an application that is widely marketed by Snap and available to users throughout the United States.

21. Defendant ByteDance Inc. is a Delaware corporation with its principal place of business in Mountain View, CA. Defendant ByteDance owns TikTok, Inc., and owns/operates the TikTok social media platform.

22. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of

different states. Venue is proper in this District under 28 U.S.C. § 1391(b)(2)

23. This Court has personal jurisdiction over Defendants because they are each headquartered and have their principal place of business in the State of California. Venue is proper in this District under 28 U.S.C. § 1391(b)(1) because Defendants Meta and ByteDance’s principal places of business are in the Northern District of California and Defendants Snap, Inc. and TikTok are residents of the State of California.

#### IV. DIVISIONAL ASSIGNMENT

24. The case is properly assigned to the San Francisco Division pursuant to Civ. L. R. 3-2(c)–(d) because a substantial part of the events or omissions giving rise to Plaintiff’s claims occurred in San Mateo County, where Defendants Meta Platforms, Inc. and ByteDance maintain their primary place of business.

#### V. FACTUAL ALLEGATIONS

##### A. Meta Background

25. Facebook is an American online social network service that is part of the Defendant Meta Platforms. Facebook was founded in 2004 and became the largest social network in the world, with nearly three billion users as of 2021, and about half that number were using Facebook every day. The company’s headquarters are in Menlo Park, California.

26. Instagram is a photo sharing social media application that originally enabled users to post and share photos that could be seen by other users who “follow” the user. A user’s followers could “like” and post comments on the photos. Instagram was purchased by Facebook, Inc. for approximately \$1 billion in 2012.

27. Facebook recently changed its name to, and is referred to herein and collectively with Instagram, as Meta.

1           28. A user’s “feed” is comprised of a series of photos and videos posted by accounts  
2 that the user follows, along with advertising and content specifically selected and promoted by  
3 Instagram. Meta exerts control over a user’s Instagram “feed,” including through certain ranking  
4 mechanisms, escalation loops, and/or promotion of advertising and content specifically selected  
5 and promoted by Meta based on, among other things, its ongoing planning, assessment, and  
6 prioritization of the types of information most likely to increase user engagement. In the case of  
7 minor users, this translates to Meta’s deliberate and repeated promotion of harmful and unhealthy  
8 content, which Meta knows or has reason to know is causing harm to its minor users.

9           29. Instagram also features a “discover” feature where a user is shown an endless feed  
10 of content that is selected by an algorithm designed by Meta based upon the users’ demographics  
11 and prior activity in the application. Meta has designed its product in a manner such that it  
12 promotes addictive use and harmful and/or unhealthy content. Meta is aware of these inherently  
13 dangerous product features and has repeatedly decided against changing them and/or  
14 implementing readily available and relatively inexpensive safety measures, for the stated purpose  
15 of ensuring continued growth, engagement, and revenue.

16           30. Users’ profiles on Instagram may be public or private. On public profiles, any user  
17 is able to view the photos, videos, and other content posted by the user. On private profiles, the  
18 users’ content may only be viewed by the user’s followers, which the user is able to approve.  
19 During the relevant period, Instagram profiles were public by default and Instagram allowed all  
20 users to message and send follow request to underage users, including Selena Rodriguez.

21           31. Defaulting profiles to public served no critical purpose in terms of product  
22 functionality and/or a user’s ability to access content. Instead, this product feature increased user  
23 engagement during onboarding (when a user first starts using Instagram) by increasing user

connections. However, Meta also has actual knowledge that harmful and/or undesirable, even dangerous, contacts could be made through this public setting feature, particularly for users under the age of 18, including Selena Rodriguez.

32. During the last five years, Instagram has added features and promoted the use of short videos and temporary posts. The latter are referred to as “Reels” while the former is referred to as Instagram “Stories.”

33. Instagram creates images and GIFs for users to incorporate into their videos and picture postings. Instagram has also acquired publishing rights to thousands of hours of music which it provides to its users to attach to the videos and pictures that they post on Instagram. These GIFs, images, and music supplied and created by Instagram frequently make a material contribution to the creation or development of its users’ Instagram posts. Indeed, in many cases, the *only* content in a user’s Instagram post is the image, GIF, or music supplied by Instagram. When users’ GIFs and music supplied by Instagram make a material contribution to the creation and/or development of its users’ postings, Instagram becomes a co-publisher of such content. These GIFs, images, and music created by Instagram frequently enhance the psychic harm and defamatory sting that minor users experience from malign third-party postings on Defendant’s platform.

34. Based on individualized data collected from their users’ social media habits, the social media activity of users’ friends and cohorts, and surreptitious monitoring of users online and offline, Instagram independently selects content for its users and notifies them of such content through text and email. Instagram’s notifications to individual users are specifically designed to and do prompt users to open Instagram and view the content selected by Instagram which increases the users’ screen time and resulting profits to Instagram.

35. Meta has developed artificial intelligence technology that detects adult users of Instagram who both send sexually explicit content to children and receive sexually explicit images from children. This technology furnishes Meta with actual knowledge that a significant number of minor users of Instagram are solicited to send, and actually do send, sexually explicit photos and videos of themselves to adult users in violation of 18 U.S.C. § 1591(a)(1)-(2).

36. Over time, Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen—meaning that 72 percent of America’s youth use Instagram. Instagram’s president Adam Mosseri testified under oath on December 8, 2021, that Instagram is not addictive. This is untrue.

#### **B. Snapchat Background**

37. Snapchat is a photo and short video sharing social media application that allows users to form groups and share posts or “Snaps” that disappear after being viewed by the recipients. The Snapchat product is well-known for its self-destructing content feature. Specifically, the Snapchat product allows users to form groups and share posts or “Snaps” that disappear after being viewed by the recipients.

38. Snapchat’s self-destructing content design feature is specifically intended to appeal to minor users by evading parents’ ability to monitor their children’s social media activity and thwart the exercise of their parental responsibility. Snapchat’s self-destructing content design feature permits minor users to exchange harmful, illegal, and sexually explicit images with adults and provides sexual predators with a safe and efficient vehicle to recruit victims.

39. Snapchat also features a series of rewards including trophies, streaks, and other signals of social recognition similar to the “likes” metrics available across other platforms. These

1 features are designed to encourage users to share their videos and posts with the public. Snapchat  
2 designed these features to be addictive, and they are. Users also have an “Explore” feed that  
3 displays content created by other users around the world. All of these product features are designed  
4 to grab and keep users’ attention for as long as possible each day, and have led many people, from  
5 psychologists to government officials, to describe Snapchat as “dangerously addictive.” Snapchat  
6 was founded in 2011 by current president and CEO Evan Spiegel and several other co-founders  
7 while they were attending Stanford University.

8 40. In 2014, Snapchat added “Stories” and “Chat” features that allowed users to post  
9 longer stories that could be viewed by users outside the user’s friends. In 2014, Snapchat also  
10 released a feature called Snapcash that allowed users to send money to other users without regard  
11 to user age, identity verification, and/or parental consent.

12 41. Snapchat allows users to enable the sharing of their location, through a tool called  
13 Snap Map, which allows the users’ followers (and the public for Snaps submitted by the users) to  
14 see the user’s location on a map. This feature is available to all users, including minors.

15 42. Snapchat has developed images for users to decorate the pictures or videos they  
16 post. Snapchat has also developed Lenses which are augmented reality-based special effects and  
17 sounds for users to apply to pictures and videos they post on Snapchat, and World Lenses to  
18 augment the environment around posts. Snapchat also has acquired publication rights to music,  
19 audio, and video content that its users can incorporate in the pictures and videos they post on  
20 Snapchat.

21 43. These images, Lenses, and licensed audio and video content supplied and created  
22 by Snapchat frequently make a material contribution to the creation or development of the user’s  
23 Snapchat posts. Indeed, in many cases, the *only* content in a user’s Snapchat post are images,

1 Lenses, and licensed audio and video content supplied and created by Snapchat. When users  
2 incorporate images, Lenses, music, audio, and video content supplied by Snapchat posts, Snapchat  
3 makes a material contribution to the creation and/or development of their Snapchat postings and  
4 becomes a co-publisher of such content. When malign users incorporate images, Lenses, music,  
5 audio, and video content supplied by Snapchat to their posts, this enhances the psychic harm and  
6 defamatory sting that minor users experience from third-party postings on Defendant's platform.

7 44. By 2015, Snapchat had over 75 million monthly active users and was considered to  
8 be the most popular social media application amongst American teenagers in terms of number of  
9 users and time spent using the platform.

10 45. Snap has developed artificial intelligence technology that detects adult users of  
11 Snapchat who send sexually explicit content to children and receive sexually explicit images from  
12 children. This technology furnishes Snap with actual knowledge that a significant number of minor  
13 users of Snapchat are solicited to send, and actually do send, sexually explicit photos and videos  
14 of themselves to adult users in violation of 18 U.S.C. § 1591(a)(1)-(2).

### 15 **C. TikTok Background**

16 46. TikTok is a video sharing social media application where users create, share, and  
17 view short video clips.

18 47. Users on TikTok who open the TikTok application are automatically shown an  
19 endless stream of videos selected by an algorithm developed by TikTok to show content on the  
20 "For You" section based upon the user's demographics, likes, and prior activity on the app.

21 48. TikTok has designed its algorithms to addict users and cause them to spend as much  
22 time on the application as possible through advanced analytics that create a variable reward system  
23 tailored to users' viewing habits and interests.

49. There are four main goals for TikTok’s algorithm, which the company translates as: “user value,” “long-term user value,” “creator value,” and “platform value.”

50. An internal TikTok document was leaked, which is titled “TikTok Algo 101.” On information and belief, it was created by TikTok’s engineering team in Beijing and offers both details about the application’s mathematical core and insight into the company’s understanding of human nature. The document frankly explains that in the pursuit of the company’s “ultimate goal” of adding daily active users, it has chosen to optimize for two closely related metrics in the stream of videos it serves: “retention”—that is, whether a user comes back—and “time spent.” The document offers a rough equation for how videos are scored, in which a prediction driven by machine learning and actual user behavior are summed up for each of three bits of data: likes, comments, and playtime, as well as an indication that the video has been played.

51. A recent Wall Street Journal report revealed how TikTok relies heavily on how much time users spend watching each video to steer them toward more videos that will keep them scrolling, and that process can sometimes lead young viewers down dangerous rabbit holes, in particular toward content that promotes suicide or self-harm.

52. TikTok also features and promotes various “challenges” where users film themselves engaging in behavior that mimics and “one-ups” other users posting videos related to a particular challenge. TikTok promotes users creating and posting videos of challenges identified by a system of hashtags that are promoted within TikTok’s search feature.

53. TikTok has a “For You” section of its platform whereby TikTok videos are funneled to users based on secret criteria. An internal document recently leaked to the New York Times revealed TikTok’s policy to exclude videos of poor, disabled, or unattractive users. Under this policy, TikTok moderators were explicitly told to suppress uploads from users with flaws both

1 congenital and inevitable. “Abnormal body shape,” “ugly facial looks,” dwarfism, “obvious beer  
2 belly,” “too many wrinkles,” “eye disorders,” and many other “low quality” traits are to be  
3 excluded. Videos in which “the shooting environment is shabby and dilapidated,” including but  
4 “not limited to ... slums, rural fields” and “dilapidated housing” were also systematically hidden  
5 from new users. The document advised TikTok’s moderators that for videos shot in someone’s  
6 house with “no obvious slummy character [sic],” special care should be given to check for  
7 “slummy” features such as a “crack on the wall” or “old and disreputable decorations.”

8 54. TikTok purports to have a minimum age requirement of 13 years old but does little  
9 to verify users’ age or enforce its age limitations despite its knowledge that use by underage users  
10 is widespread.

11 55. Until mid-2021, TikTok by default made all users’ profiles “public,” meaning that  
12 strangers, often adults, could view and message underage users of the TikTok application.

13 56. TikTok exclusively controls and operates the TikTok platform for profit, which like  
14 Instagram and Snapchat, creates advertising revenue through maximizing the amount of time users  
15 spend on their platforms.

16 57. TikTok does not seek parental consent for underage users or provide any warnings  
17 or controls that would allow parents to monitor and limit the use of TikTok by their children.

18 58. TikTok has also developed GIFs, memes, music, and images for users to apply to  
19 images they post on TikTok. TikTok also has acquired publication rights to music that its users  
20 can incorporate in the pictures and videos they post on TikTok. Images, GIFs, memes, and music  
21 supplied by TikTok frequently make a material contribution to the creation and/or development of  
22 users’ postings, making TikTok a co-publisher of such content. These images and memes supplied  
23 by TikTok frequently enhance the psychic harm and defamatory sting that minor users experience

1 from malign third-party postings on Defendant's platform.

2 59. TikTok has developed artificial intelligence technology that detects adult users of  
3 TikTok who send sexually explicit content to children and receive sexually explicit content from  
4 children. This technology furnishes TikTok with actual knowledge that a significant number of  
5 minor users of Instagram are solicited to send and actually do send sexually explicit photos and  
6 videos of themselves to adult users in violation of 18 U.S.C. § 1591(a)(1)-(2).

7 60. TikTok is highly integrated with its Chinese parent, ByteDance. TikTok's  
8 engineering manager works on both TikTok and ByteDance's similar Chinese app, Douyin.  
9 TikTok's development processes are closely intertwined with Douyin's process. TikTok  
10 employees are also deeply interwoven into ByteDance's ecosystem. They use a ByteDance  
11 product called Lark, a corporate internal communications system like Slack but with aggressive  
12 performance-management features aimed at forcing employees to use the system more.

13 **D. Defendants' Applications Are Products**

14 61. Instagram, Snapchat, and TikTok are products that are designed and manufactured  
15 by Meta, Snap, and TikTok, respectively. These products are designed to be used by children and  
16 are actively marketed to children throughout the world.

17 62. Defendants' products are designed to be used by minors and are actively marketed  
18 to minors across the United States. Defendants market to minors through their own marketing  
19 efforts and design. But also, Defendants work with and actively encourage advertisers to create  
20 ads targeted at and appealing to teens, and even to children under the age of 13. Defendants spend  
21 millions of dollars researching, analyzing, and experimenting with young children to find ways to  
22 make their products more appealing and addictive to these age groups, as these age groups are  
23 seen as the key to Defendants' long-term profitability and market dominance.

63. Defendants are aware that large numbers of children under the age of 18 use their products without parental consent. They design their products in a manner that allows and/or does not prevent such use to increase user engagement and, thereby, their own profits.

64. Defendants are aware that large numbers of children under the age of 13 use their products despite user terms or “community standards” that purport to restrict use to individuals who are 13 and older. They have designed their products in a manner that allows and/or does not prevent such use to increase user engagement and, thereby, their own profits.

**E. Defendants’ Business Model is Based on Maximizing User Screen Time**

65. Defendants advertise their products as “free,” because they do not charge their users for downloading or using their products. What many users do not know is that, in fact, Defendants make a profit by finding unique and increasingly dangerous ways to capture user attention and target advertisements to their users. Defendants receive revenue from advertisers who pay a premium to target advertisements to specific demographic groups of users in the applications. Defendants also receive revenue from selling their users’ data to third parties.

66. The amount of revenue Defendants receive is based upon the amount of time and level of user engagement on their platforms, which directly correlates with the number of advertisements that can be shown to each user.

67. Defendants use unknown and changing rewards that are designed to prompt users who consume their social media products in excessive and dangerous ways. Defendants know, or in the exercise of ordinary care should know, that their designs have created extreme and addictive usage by their minor users, and Defendants knowingly or purposefully designed its products to encourage such addictive behaviors. For example, all the achievements and trophies in Snapchat are unknown to users. The Company has stated that “[y]ou don’t even know about the achievement

1 until you unlock it.” This design conforms to well-established principles of operant conditioning  
2 wherein intermittent reinforcement provides the most reliable tool to maintain a desired behavior  
3 over time.

4 68. This design is akin to a slot machine but marketed toward minor users who are even  
5 more susceptible than gambling addicts to the variable reward and reminder system designed by  
6 Snapchat. The system is designed to reward increasingly extreme behavior because users are not  
7 actually aware of what action will unlock the next award.

8 69. Instagram, like Snapchat and TikTok, is designed around a series of features that  
9 do not add to the communication utility of the application, but instead seek to exploit minor users’  
10 susceptibility to persuasive design and unlimited accumulation of unpredictable and uncertain  
11 rewards, including “likes” and “followers.” In the hands of children, this design is unreasonably  
12 dangerous to the mental well-being of underage users’ developing minds.

13 70. According to industry insiders, Defendants have employed thousands of  
14 psychologists and engineers to help make their products maximally addicting. For example,  
15 Instagram’s “pull to refresh” is based on how slot machines operate. It creates an endless feed,  
16 designed to manipulate brain chemistry and prevent natural end points that would otherwise  
17 encourage users to move on to other activities.

18 71. Defendant do not warn users of the addictive design of their product. On the  
19 contrary, Defendants actively try to conceal the dangerous and addictive nature of their products,  
20 lulling users and parents into a false sense of security. This includes consistently playing down  
21 their products’ negative effects on teens in public statements and advertising, making false or  
22 materially misleading statements concerning product safety, and refusing to make their research  
23 public or available to academics or lawmakers who have asked for it.

72. For example, in or around July 2018, Meta told BBC News that “at no stage does wanting something to be addictive factor into” its product design process. Similarly, Meta told U.S. Senators in November 2020 that “We certainly do not want our products to be addictive.” Yet, Meta product managers and designers attend an annual conference held in Silicon Valley called the Habit Summit, the primary purpose of which is to learn how to make products more habit-forming.

73. Defendants engineer their products to keep users, and particularly young users, engaged longer and coming back for more. This is referred to as “engineered addiction,” and examples include features like bottomless scrolling, tagging, notifications, and live stories.

74. Internal Meta documents identify the potential of reduction in usage by their minor users as an “existential threat” to their business and spend billions of dollars per year marketing their products to minors. Defendants have deliberately traded in user harm to protect the revenue stream their products generate.

**F. Defendants Have Designed Complex Algorithms to Addict Teen Users.**

75. Defendants have intentionally designed their products to maximize users’ screen time, using complex algorithms designed to exploit human psychology and driven by the most advanced computer algorithms and artificial intelligence available to three of the largest technology companies in the world.

76. Defendants’ algorithms select content for minor users not based on what they anticipate the user will prefer or to enhance their social media experience, but rather for the express purpose of habituating users to the Defendants’ social media products. Defendants’ algorithms do not provide a neutral platform but rather specify and prompt the type of content to be submitted and determine particular types of content its algorithms promote.

1           77. Defendants designed and have progressively modified their products to promote  
2 problematic and excessive use that they know is indicative of addictive and self-destructive use.

3           78. One of these features—present in Snapchat, Instagram, and TikTok—is the use of  
4 complex algorithms to select and promote content that is provided to users in an unlimited and  
5 never-ending “feed.” Defendants are well aware that algorithm-controlled feeds promote unlimited  
6 “scrolling”—a type of use those studies have identified as detrimental to users’ mental health—  
7 however, this type of use allows Defendants to display more advertisements and obtain more  
8 revenue from each individual user.

9           79. Defendants know that content that generates extreme psychological reactions in  
10 minor users is more likely to trigger their engagement than content that is benign. Defendants have  
11 designed algorithm-controlled feeds to promote content most likely to increase user engagement,  
12 which often means content that Defendants know to be psychologically stressful to their users.  
13 Content is selected not just based on individual users’ viewing history but also on the viewing  
14 history of their linked friends. Users are exposed to content that they would otherwise never see  
15 but for Defendants’ affirmative pushing of such content to their accounts.

16           80. The addictive nature of Defendants products and the complex and psychologically  
17 manipulative design of their algorithms is unknown to ordinary consumers, particularly minors.

18           81. Defendants go to significant lengths to prevent transparency, including posing as a  
19 “free” social media platform, burying advertisements in personalized content, and making public  
20 statements about the safety of their products that simply are not true.

21           82. Defendants also have developed unique product features designed to limit, and have  
22 in other ways limited, parents’ ability to monitor and prevent problematic use by their children.

23           83. Defendants’ algorithms adapt to promote whatever content will trigger minor users’

1 engagement and maximize their screen time. Defendants' algorithm designs do not distinguish,  
2 rank, discriminate, or prioritize between particular content based on whether it is helpful or  
3 harmful to the psychic well-being of their minor users. Once a minor user engages with abusive,  
4 harmful, or destructive content, Defendants' algorithms will direct the minor user to content that  
5 is progressively more abusive, harmful, and destructive to maximize the user's screen time.

6 84. Defendants' algorithms are not simply tools meant to facilitate the communication  
7 and content of others but are content in and of themselves. Defendants' algorithms do not function  
8 like traditional search engines that select particular content for users based on user inputs; they  
9 direct minor users to content based on far more than the individual users' viewing history.  
10 Defendants' algorithms make recommendations not simply based on minor users' voluntary  
11 actions but also the demographic information and social media activity of the users' friends,  
12 followers, and cohorts. The user data that Defendants' algorithms use to select content therefore  
13 encompasses far more information than voluntarily furnished by the particular user and include  
14 private information about the user that Defendants discover through undisclosed surveillance of  
15 their behavior both online and offline.

16 **G. Minor Users' Incomplete Brain Development Renders Them Particularly**  
17 **Susceptible to Manipulative Algorithms with Diminished Capacity to Eschew Self-**  
18 **Destructive Behaviors and Less Resiliency to Overcome Negative Social Media**  
**Influences**

19 85. The human brain is still developing during adolescence in ways consistent with  
20 adolescents' demonstrated psychosocial immaturity. Specifically, adolescents' brains are not yet  
21 fully developed in regions related to risk evaluation, emotional regulation, and impulse control.

22 86. The frontal lobes—and in particular the prefrontal cortex—of the brain play an  
23 essential part in higher-order cognitive functions, impulse control, and executive decision-making.

1 These regions of the brain are central to the process of planning and decision-making, including  
2 the evaluation of future consequences and the weighing of risk and reward. They are also essential  
3 to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal  
4 cortex is one of the last regions of the brain to mature.

5 87. During childhood and adolescence, the brain is maturing in at least two major ways.  
6 First, the brain undergoes myelination, the process through which the neural pathways connecting  
7 different parts of the brain become insulated with white fatty tissue called myelin. Second, during  
8 childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused  
9 synapses, leading to more efficient neural connections. Through myelination and pruning, the  
10 brain’s frontal lobes change to help the brain work faster and more efficiently, improving the  
11 “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift  
12 in the brain’s composition continues throughout adolescence and into young adulthood.

13 88. In late adolescence, important aspects of brain maturation remain incomplete,  
14 particularly those involving the brain’s executive functions and the coordinated activity of regions  
15 involved in emotion and cognition. As such, the part of the brain that is critical for control of  
16 impulses, emotions, and mature, considered decision-making is still developing during  
17 adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of  
18 juveniles.

19 89. The algorithms in Defendants’ social media products are designed to exploit minor  
20 users’ diminished decision-making capacity, impulse control, emotional maturity, and  
21 psychological resiliency caused by users’ incomplete brain development. Defendants know, or in  
22 the exercise of reasonable care should know, that because their minor users’ frontal lobes are not  
23 fully developed, they experience enhanced dopamine responses to stimuli on Defendants’ social

media platforms and are therefore much more likely to become addicted to Defendants' products; exercise poor judgment in their social media activity; and act impulsively in response to negative social media encounters. Defendants also know, or in the exercise of reasonable care should know, that minor users of their social media products are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants knowingly designed their social media products to be addictive to minor users and failed to include in their product design any safeguards to account for and ameliorate the psychosocial immaturity of their minor users.

**H. Defendants Misrepresent the Addictive Design and Effects of their Social Media Products**

90. During the relevant time period, Defendants stated in public comments that their products are not addictive and were not designed to be addictive. Defendants knew or should have known that those statements were untrue.

91. Neither Instagram, TikTok, or Snapchat warned users or their parents of the addictive and mentally harmful effects that the use of their products was known to cause amongst minor users, like Selena Rodriguez. On the contrary, Defendants have gone to significant lengths to conceal and/or avoid disclosure as to the true nature of their products.

**I. Plaintiff Expressly Disclaims Any Claim That Defendants Are Liable as the Publisher or Speaker of Any Content Provided, Posted or Created by Third Parties**

92. Plaintiff is not alleging that Defendants are liable for what the third parties said, but for what Defendants did or did not do. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words or content. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for Defendants' good faith attempts to restrict access to objectionable content.

93. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, as well as Defendants' own statements and affirmative acts, not as the speaker or publisher of third-party content.

94. Defendants also failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. These dangers which are unknown to ordinary consumers, do not arise from third-party content contained on Defendants' social media platform but rather from their algorithms' designs that 1) addict minor users to Defendants' products; 2) affirmatively select and promote harmful content to vulnerable users based on their individualized demographic data and social media activity; and 3) put minor users in contact with dangerous adult predators.

95. Plaintiff's product defect claims arising from Defendants' addictive social media products are content neutral. For example, Defendants design and operate their algorithms in a manner intended to and that does change behavior and addict users, including through a natural selection process that does not depend on or require any specific type of third-party content.

96. Defendants' product features are designed to be and are addictive and harmful in themselves, without regard to any content that may exist on Defendants' platforms. For example, Meta's "like" feature and Snapchat's "Snapstreaks" are content neutral and based solely on the user's level of activity on Defendants' platforms, not the content of the material they see.

97. Defendants have designed other product features for the purpose of encouraging and assisting children in evasion of parental oversight, protection, and consent, which features are wholly unnecessary to the operation of Defendants' products.

98. Defendants affirmatively promote, encourage, and/or otherwise contribute to the

1 development of harmful content. In an October 2021 Senate Hearing it was revealed that Meta  
2 documents provided by a whistleblower demonstrate that Defendants promote, encourage, and/or  
3 otherwise contribute to the development of harmful content. The Senate hearing revealed that

- 4 a. Defendants approve of ads that contain harmful content, for example, “designed to  
5 encourage and promote anorexia” and encourage children to abuse prescription or  
6 illegal drugs, which ads Defendants then target specifically at children in exchange  
7 for payment.
- 8 b. Defendants utilize private information of their minor users to “precisely target  
9 [them] with content and recommendations, assessing what will provoke a reaction,”  
10 including encouragement of “destructive and dangerous behaviors.” Defendants  
11 specifically select and push this harmful content, for which they are paid, to  
12 increase user engagement. “That’s how [defendants] can push teens into darker and  
13 darker places.” (Senator Blumenthal, October 5, 2022).
- 14 c. Defendants “know[] that [their] amplification algorithms, things like engagement  
15 based ranking ... can lead children from very innocuous topics like healthy recipes  
16 ... all the way from just something innocent like healthy recipes to anorexia  
17 promoting content over a very short period of time.” Defendants have knowledge  
18 that their products and the content they are encouraging and helping to create is  
19 harmful to young users and choose “profits over safety.”

20 99. Defendants have information and knowledge that can determine with reasonable  
21 certainty each user’s age, habits, and other personal information, regardless of what information  
22 the user provides at the time of account setup.

23 100. Defendants’ algorithms identify minor users by age and gender and, on information

1 and belief, race, ethnicity, sexual orientation, and economic status and direct specific content to  
2 specific users based upon these factors. User data obtained through Defendants' algorithms,  
3 particularly age and gender, affirmatively directs predatory adults to vulnerable minor users. In  
4 this way, the Defendant's algorithms promote responses from predatory adult users that violate  
5 state and federal law. Because Defendants' social media products themselves generate the options  
6 for selecting a user based on predatory criteria, they materially contributed to the unlawfulness of  
7 the posted content described herein.

8 101. None of Plaintiff's Claims for Relief set forth herein treat Defendants as a speaker  
9 or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for  
10 their own speech and their own silence in failing to warn of foreseeable dangers arising from  
11 anticipated use of their products. Defendants could manifestly fulfill their legal duty to design  
12 reasonably safe social media products and furnish adequate warnings of foreseeable dangers  
13 arising out of the use of their products without altering, deleting, or modifying the content of a  
14 *single* third-party post or communication.

15 **J. Selena Rodriguez Died of Suicide Proximately Caused by Defendants' Defective**  
16 **Social Media Products**

17 102. Selena Rodriguez was born on December 13, 2009, and grew up in Chicopee,  
18 Massachusetts and Enfield, Connecticut. She was a vivacious child and was loved by her teachers  
19 at Lambert-Lavoie Elementary School in Chicopee, Massachusetts and Prudence Crandall  
20 Elementary School in Enfield, Connecticut.

21 103. When she was nine years old, Selena was given a computer tablet to access the  
22 internet. Shortly thereafter, she downloaded Defendants' social media products without her  
23 mother's knowledge or consent.

1           104. Selena's social media use coincided with a decline in her mental health and  
2 academic performance. She quickly became addicted to Defendants' products and spent increasing  
3 amounts of time communicating on social media. By mid-2021, Selena was on social media at all  
4 hours of the day and night and communicating with over 2,500 different individuals, all but a  
5 handful of whom were complete strangers to her and many of whom were adult users of  
6 Defendants' products.

7           105. Selena's mother attempted multiple times to reduce or limit her daughter's use of  
8 social media. Because of Selena's addiction to Defendants' products, however, these efforts at  
9 exercising Plaintiff's parental rights and authority caused a severe reaction by Selena. Because  
10 Defendants' products did not contain or permit parental controls, the only way for Tammy  
11 Rodriguez to effectively limit her child's access to Defendants' products was to physically  
12 confiscate Selena's internet-enabled devices, which simply caused Selena to self-harm or run away  
13 from home in order to access Defendants' products on other devices.

14           106. During the Covid-19 pandemic, Selena spent more and more time on Instagram,  
15 TikTok, and Snapchat, which only worsened her depression, anxiety, and level of sleep  
16 deprivation. By 2021, Selena was communicating on social media throughout the night and would  
17 get as little as two hours of sleep a night.

18           107. Tammy Rodriguez sought mental health treatment for Selena on multiple  
19 occasions. An outpatient therapist who evaluated Selena remarked that she had never seen a patient  
20 as addicted to social media as Selena. By the spring of 2021, Selena was experiencing severe sleep  
21 deprivation that was caused and aggravated by her addiction to Instagram, Snapchat, and TikTok  
22 and the constant 24-hour stream of notifications and alerts sent by Defendants.

23           108. As a proximate result of her use of Instagram, TikTok, and Snapchat, and

1 specifically due to the intentionally addictive nature of these products, Selena Rodriguez had  
2 multiple absences from school, which further deprived her of support services and caused the  
3 Connecticut Department of Children and Families to investigate.

4 109. The Connecticut Department of Children and Families found Tammy Rodriguez to  
5 be a responsible and responsive parent, who was seeking to access mental health support services  
6 for her struggling daughter.

7 110. Prompted in part by Snapchat's "disappearing" message feature and other design  
8 features geared toward the promotion of sharing explicit images, Selena sent sexually explicit  
9 images using Snapchat, which were subsequently shared or leaked to her classmates, increasing  
10 the ridicule and embarrassment she experienced at school.

11 111. Through her use of Instagram, TikTok, and Snapchat, Selena was messaged and  
12 solicited for sexual exploitive content and acts on numerous occasions by adult male users of  
13 Instagram and Snapchat, who are encouraged to use these platforms to sexually solicit and abuse  
14 minors due to Defendants' refusal to verify identity and age for new users.

15 112. As a proximate result of Selena's addictive, problematic, and sexually exploitative  
16 encounters on Instagram, TikTok, and Snapchat, she developed numerous mental health conditions  
17 including an eating disorder, self-harm, and physically and mentally abusive behaviors toward her  
18 mother and sibling and underwent multiple inpatient psychiatric admissions.

19 113. Defendants provided Selena with access to multiple accounts on Defendants' social  
20 media platforms without her mother's knowledge or consent.

21 114. Defendants possessed actual knowledge that Selena was under the age of 13 and  
22 obtained multiple accounts under different usernames, yet failed to restrict her access or notify  
23 Plaintiff of her daughter's account status. Plaintiff has only been able to access one account (an

Instagram account) among the numerous Instagram, Snapchat, and TikTok accounts for which Selena signed up. On information and belief, the data relating to that account resides on Meta's servers. Moreover, analysis of just some of the messages, photographs, and audio and video recordings from this single account reveals numerous instances of sexual exploitation and abuse by adult users, bullying, and depression.

115. Between March 16 and March 17, 2020, when Selena was only ten years old, she had the following exchange with an Instagram User, whose username currently is unknown to Plaintiff but is known to Meta ("Unknown User No. 5"):

Instagram User  
fck corona virus join my hot snapchat ➡ iamHornyHoney  
Mar 16, 2020, 11:54 AM

Selena Rodriguez  
hi  
Mar 16, 2020, 11:54 AM

Mar 16, 2020, 11:57 AM

Selena Rodriguez  
hey  
Mar 16, 2020, 11:57 AM

Instagram User  
if you want to go live with me go add me on snap👉 IamHornyHoney  
Mar 17, 2020, 1:39 AM

1 All references to time are based on information and belief provided from the report the Instagram  
2 product itself made available, and on information and belief reflect PST or similar, such that they  
3 are three to four hours behind the time it would have been for Selena.

4 116. Between April 15 and June 4, 2020, Selena had a series of Instagram exchanges  
5 with another Instagram User, whose username currently is unknown to Plaintiff but is known to  
6 Meta (“Unknown User No. 6”). Unknown User No. 6 identified himself as an adult male from  
7 India. Unknown User No. 6 offered to send Selena “a pick of it [his penis]” in a video call then  
8 attempted to initiate a video call multiple times. After Selena responded, “no more,” Unknown  
9 User No. 6 kept pleading and Selena responded: “NO OR I BLOCK.” Unknown User No. 6  
10 responded with the following messages, in rapid succession:

11 “Can u send me ur boobs pic”  
12 “Pls can u send”  
13 “Show ur boobs”  
14 “Plz”  
15 “Show ur pussy”  
16 “Plz dear”  
17 “Send pic”  
18 “I will send u my penis pic”  
19 “Plz send ur pussy pic”  
20 “R u sending”

21 Selena was 10 years old at this time and ultimately succumbed to the bullying of this adult male  
22 user and agreed to receive a penis picture from him. He then responded that he would not send it  
23 until she sent her “pussy pic.”

24 117. On June 4, 2020, Unknown User No. 6 and Selena chatted by video at his request  
25 and on information and belief, they ultimately exchanged sexually explicit images. Unknown User  
26 No. 6 again began asking her to send pictures. Selena sent him a face shot and told him that she  
27 just made a “fan page.” Plaintiff understands that this means Instagram allowed her to open another

1 account, with the sole purpose of providing other users with access to her.

2 118. Unknown User No. 6 responded, “Can u show me your tites in video call,” and  
3 Selena sent an audio message: “Okay listen. I am a fan page only and I am young so STOP I’m  
4 gonna call you right now.”

5 119. On March 20, 2021 at 7:07 PM Selena received the following targeted  
6 advertisement on her Instagram account:

7 Hey! We are looking for ladies to be models and brand ambassadors for our  
8 brand!! Please send us a message at our main account @nkdunderwear  
ASAP and let's talk there

9 The advertisement linked to an Instagram page promoting NKD Underwear & Apparel, online  
10 retailer of adult women’s underwear, swimwear, and leisure wear.  
11 <https://wearnk.com/pages/about> (last visited Apr. 30, 2022).

12 120. On June 17, 2021, at 8:42 am, Selena engaged in the following exchange with  
13 another Instagram User, whose username currently is unknown to Plaintiff but is known to Meta  
14 (“Unknown User No. 59”):

15 Unknown User No. 59  
16 I’m Lewis will you be my sugar baby I will be giving you \$300 twice in a  
17 week. Let me know if you are interested  
Jun 17, 2021, 8:42 AM

18 Selena Rodriguez  
19 No cause I am 12  
Jun 17, 2021, 8:43 AM

20 Unknown User No. 59  
21 Okay  
Jun 17, 2021, 8:43 AM

22 Selena Rodriguez  
23 Your like 30  
Jun 17, 2021, 8:44 AM

Unknown User No. 59

1 Yes  
2 Jun 17, 2021, 8:44 AM

3 Selena Rodriguez  
4 You can get arrested  
5 Jun 17, 2021, 8:46 AM

6 121. Selena was not able to resist similar entreaties from other adult Instagram users.  
7 Between June 15 and June 27, 2021, she communicated with an Instagram user who goes by the  
8 username “coldwatermage” and received the following message:

9 Im gonna visit you in august And ill take you shoppin n on cute dates deal  
10 ? Selena???  
11 Jun 24, 2021, 12:54 PM

12 Selena and “coldwatermage” then exchanged a series of disappearing pictures and images. On  
13 information and belief, these exchanges included sexually explicit content.

14 122. Selena used Defendants’ social media products interchangeably to exchange  
15 sexually explicit content and images with other users, many of whom were over the age of 18. She  
16 would receive a message from an adult user on Instagram telling her to send lewd photos of herself  
17 on Snapchat or TikTok.

18 123. On July 16, 2021, Selena was contacted by another Instagram user, whose  
19 username currently is unknown to Plaintiff but is known to Meta (“Unknown User No. 51”), by  
20 sending her an Instagram link and message “yeahh.” Plaintiff has been unable to access the content  
21 originally located at that link, but Meta would have such access. On information and belief, these  
22 types of exchanges were ones originating because of Instagram’s public profile product feature.  
23 That is, adult Instagram users who did not know Selena in real life were able to find her, and other  
young girls, because of Instagram’s public profile feature, along with recommendations and other  
Instagram features. Once such access was obtained, these adult users would either send her a link  
to her own content or to sexually explicit content, along with illicit messages designed to provide

1 exploit her.

2 124. Selena responded to Unknown User No. 51 with “Im 12 sorry” and Unknown User  
3 No. 51 replied “Damn well can I at least get a pic”. Selena sent Unknown User No. 51 face  
4 photographs and a TikTok video of her dancing. Unknown User No. 51 responded: “U got nudes?”  
5 Selena replied that she did but that she would not show him.

6 125. Between March 19 and March 20, 2021, Selena exchanged a series of messages  
7 with an Instagram user who is referred to in an exchanged photo as “fartbrains07.” His first  
8 message to her was “So Cute”. He then started complimenting Selena and Selena realized that this  
9 user had previously messaged her friend, H. She sent him a photo of himself naked from the back  
10 and said he had a “flat ass.” She also told him that she got the photo from her friend, H. The other  
11 user then became irritated and sent Selena a photo of H with her shirt up and then a photo of Selena  
12 with *her* shirt up and showing part of Selena’s face. Selena told him to delete the picture, or she  
13 would call the police: “those boobs that got sent the last picture those are mind[sic] so please delete  
14 it.” He initially said to go ahead and call the police, but then said he would delete Selena’s photo,  
15 but not H’s because “she is not a good girl.” Throughout this conversation, every time Selena did  
16 not immediately respond, “fartbrains07” became hostile, and his tone turned threatening. Selena  
17 told him she was in school. She threatened to block him but never did. “Fartbrains07” asked Selena  
18 for an “ass pic” and she said no. He then offered to send her an “ass and dick” picture, and said he  
19 thinks she and H are the same person. She denied it. He said, “So see me ur boobs to make sure.”  
20 When she refused, he threatened to “publish” the photo he had of her with her shirt up and part of  
21 her face showing.

22 126. These are just a few of many examples of the many types of harmful and illegal  
23 behavior that transpired because of Meta’s social media product and this one Instagram account.

On information and belief, when the data from all of Selena's accounts on Instagram, Snapchat, and TikTok are produced in discovery, they will reveal a more extensive pattern of bullying, sexual abuse, and commercial sex acts as set forth herein.

127. Between May 26 and June 3, 2021, Selena was hospitalized for suicidal ideation. Her treaters observed excessive social media usage as a factor in her mental distress. At that time, however, the addictive design and harm caused by foreseeable use of Defendants' products, especially to minors, was still not publicly known.

128. Between June 13 and June 23, 2021, Selena had a series of Instagram and Snapchat exchanges with another user of Defendants' products, who went by the Instagram username "Hxcked\_Xccount\_101," which included the following:

Hxcked\_Xccount\_101: Oh my little lady wanna blow these pipes 7:03 PM

Hxcked\_Xccount\_101 I see you have liked my posts 7:03 PM

Hxcked\_Xccount\_101 then left several bizarre (high pitched voice) audio messages for Selena, which include the following,

Hello, I see that you have liked my posts ... [inaudible] if you wanted to blow my pipes, I would love it. And I just wanted to let you know that I am going to blow your balloon. And ... [inaudible]. And [inaudible] ... please have my pee in your mouth."

129. Selena responded, "Yes daddy" and sent Hxcked\_Xccount\_101 sexually explicit Snapchat photos. Then, on information and belief, they stopped chatting on Instagram and moved the discussion to Snapchat. One week later, Instagram texts between Selena and Hxcked\_Xccount\_101 reveal that he knows her name and talks to her as though they have become very close over a very short time. The day Selena died, Hxcked\_Xccount\_101 texted her excessively and tried to initiate audio calls. He wrote one letter at a time: S-E-L-E-N-A-P-L-Z-A-

1 N-S-W-E-R-M-E-R-N, and later that night (likely at 2:45 or 3:45 am on July 22) he wrote “why  
2 did you do it” “I loved u so much.”

3 130. On July 13, 2020, Selena was engaged in a 46-minute video chat on Instagram with  
4 a user known only as “Mark.” While the call was underway, Selena received two sexually explicit  
5 Snapchat photos from “Mark.”

6 131. On June 16, 2021, Selena sent an Instagram user known as “giggill pig” eight  
7 photos. Many are explicit and constitute Child Sexual Abuse Material (known as “CSAM”).  
8 Selena can be identified as the subject of those photos based on the background—that is, red lights  
9 she had in her room and that can be observed in other, non-explicit photos. The solicited photos,  
10 including photos that don’t show her face, show the red lights that we see in less explicit photos  
11 as being in her bedroom, and the body type matches hers. These photos are very explicit and  
12 include some in her underwear and in suggestive positions on her bed, as well as full-body naked  
13 and vagina photos.

14 132. On June 23, 2021, at 8:39 pm, Selena sent an explicit video to Instagram user  
15 “JAY.” The image is focused on Selena’s genital area and depicts her masturbating. Upon learning  
16 of this video, the undersigned law firm made a report to the National Center for Missing &  
17 Exploited Children.

18 133. The sexual abuse and bullying that Selena sustained through her addiction to  
19 Defendants’ social media products was a proximate cause of her depression, anxiety, and suicidal  
20 ideation. Between May 14 and May 23, 2021, Selena exchanged messages with another Instagram  
21 user, a female whose username currently is unknown to Plaintiff but is known to Meta (“Unknown  
22 User No. 35”).

23 Instagram User  
What’s wrong

May 16, 2021, 8:10 PM

Selena Rodriguez

Everything I get bullied I get told to kill myself I get told to cut myself I  
get told that nobody loves me that I'm a waste of sperm and a mistake

May 16, 2021, 8:11 PM

Instagram User

Omg that's horrible I'm so sorry

May 16, 2021, 8:11 PM

Selena Rodriguez

Its fine

May 16, 2021, 8:11 PM

Instagram User

But people shouldn't be talking to you like that that's not right

May 16, 2021, 8:51 PM

134. Between April 30 and June 13, 2021, Selena communicated with another Instagram user, whose username currently is unknown to Plaintiff but is known to Meta ("Unknown User No. 30"). On May 1, 2021, Selena wrote to him,

I am crying i wanna die i feel every one hates me i fight myself every day  
not to kms because i remember some people love me i self harm i know i  
sound dramatic and dumb but my depression is so bad and i am just not  
okay inside

135. On May 20, 2021, Selena wrote an Instagram to another Instagram user, an 11-year-old boy from Philadelphia, "I hate my life baby I am sorry I almost left." Selena became suicidal and was hospitalized for emergency psychiatric care on May 26, 2021. Upon her return from the hospital, Selena told Unknown User No. 30 on June 9, 2021 "Sorry just got home from Connecticut children's hospital for trying to kms."

136. On the afternoon of July 21, 2021, while Tammy Rodriguez was at work, Selena accessed her mother's supply of Wellbutrin. She returned to her bedroom, placed her phone on a table, pointed it at herself, and turned on the video camera. Holding two Wellbutrin pills between

1 her fingers, she looked straight in the camera, tilted her head back, and placed the pills in her  
2 mouth. She then took a gulp of soda out of a bottle, looked into the camera, made the “Peace Out”  
3 hand gesture and playfully stuck out her tongue. Selena posted her six-second suicide video on  
4 Snapchat on which she had incorporated audio from the NF song “Paralyzed” licensed to Snap:

5 *I'm paralyzed*  
6 *Where are my feelings?*  
7 *I no longer feel things*  
8 *I know I should*  
9 *I'm paralyzed*  
10 *Where is the real me?*  
11 *I'm lost and it kills me*  
12 *Inside*  
13 *I'm paralyzed*

14 137. When Tammy Rodriguez returned from work, she found Selena unconscious and  
15 barely breathing. She called 911 and Selena was transported to the hospital by ambulance.  
16 Physicians were unable to revive her, and she was pronounced dead. The Medical Examiner  
17 conducted toxicology reports and found that Selena died of Acute Bupropion Intoxication caused  
18 by Suicide. The Medical Examiner report reported that Selena suffered from “Major Depressive  
19 Disorder, Anxiety and Attention Deficit Hyperactivity Disorder” noting her recent hospitalization  
20 for suicidal ideation.

21 138. When Tammy Rodriguez cleaned out Selena’s room after her death, Plaintiff found  
22 five knives hidden under her bed.

23 139. Selena’s death was the proximate result of psychic injury caused by her addictive  
use of Instagram, TikTok, and Snapchat social media products.

140. Throughout the period of Selena’s use of social media, Tammy Rodriguez was  
unaware of the clinically addictive and mentally harmful effects of Instagram, TikTok, and  
Snapchat.

as if fully stated herein.

147. Under Restatement (Second) of Torts § 402(a), California and Connecticut law, one who sells any product in a defective condition unreasonably dangerous to the user is subject to liability for physical harm thereby caused to the user if (a) the seller is engaged in the business of selling such a product, and (b) it is expected to and does reach the user or consumer without substantial change in the condition which it was sold.

148. Defendants designed, manufactured, marketed, and sold products that were unreasonably dangerous because they were designed to be addictive to the minor users to whom Defendants actively marketed and because the foreseeable use of Defendants' products causes mental and physical harm to minor users.

149. Defendants' products were unreasonably dangerous because they contained numerous design characteristics that are not necessary for the utility provided to the user but are unreasonably dangerous and implemented by Defendants solely to increase the profits they derived from each additional user and the length of time they could keep each user dependent on their product.

**A. Inadequate Safeguards From Harmful and Exploitative Content**

150. As designed, Snapchat, TikTok, and Instagram algorithms are not reasonably safe because they intentionally direct minor users to harmful and exploitative content while failing to deploy feasible safeguards to protect vulnerable teens from such harmful exposures. It is feasible to design an algorithm that substantially distinguishes between harmful and innocuous content and protects minor users from harmful content without altering, modifying, or deleting a *single* third-party posting on Defendants' social media platforms. The cost of designing Defendants' algorithms to incorporate this safeguard would be negligible, while the benefit would be high in

1 terms of reducing the quantum of mental and physical injury sustained by minor users such as  
2 Selena Rodriguez and their families.

3 151. Snapchat, TikTok, and Meta also engage in conduct, outside of the algorithms  
4 themselves, which is designed to promote harmful and exploitative content as a means of  
5 increasing their revenue from advertisements. This includes, but is not limited to, efforts to  
6 encourage advertisers to design ads that appeal to minors, including children under the age of 13;  
7 and product design features intended to attract and engage minor users to these virtual spaces  
8 where harmful advertising content is then pushed to those users in a manner intended to increase  
9 user engagement, thereby increasing revenue to Defendants at the direct cost of user well-being.

10 152. Reasonable users (and their parents) would not expect that Defendants would  
11 knowingly direct them to such harmful content, much less in the manipulative and coercive manner  
12 that they do. Defendants have and continue to knowingly use their algorithms on minor users in a  
13 manner designed to affirmatively change their behavior, which methods are particularly effective  
14 on (and harmful to) Defendants' youngest users, like Selena Rodriguez.

15 **B. Failure to Verify Minor Users' Age and Identity**

16 153. As designed, Defendants' products are not reasonably safe because they do not  
17 provide for adequate age verification by requiring users to document and verify their age and  
18 identity.

19 154. Adults frequently set up user accounts on Defendants' social media products  
20 disguising their identity and/or posing as minors to groom unsuspecting minors to exchange  
21 sexually explicit content and images, which frequently progresses to sexual exploitation and  
22 trafficking, and commercial sex acts.

23 155. Minor users of social media and their parents do not reasonably expect that prurient

adults set up fraudulent accounts on Defendants' social media products and pose as minors for malign purposes.

156. Likewise, minor users whose parents have taken affirmative steps to keep them away from Defendants' products often open multiple accounts, such that Defendants know or have reason to know that the user is underage and/or does not have parental permission to use their product. Defendants already have the information and means they need to ascertain with reasonable certainty their users' actual age. Defendants utilize these tools to investigate, assess, and report on percentages and totals of underage users for internal assessment purposes. They then choose to simply do nothing about that information as it relates to the specific, underaged users themselves.

157. Reasonably accurate age and identity verification is not only feasible but widely deployed by online retailers and internet service providers. Defendants not only have the ability to estimate the age of their users, but actually do so.

158. The cost of incorporating age and identity verification into Defendants' products would be negligible, whereas the benefit of age and identity verification would be a substantial reduction in severe mental health harms, sexual exploitation, and abuse among minor users of Defendants' products.

### **C. Inadequate Parental Control and Monitoring**

159. Defendants have intentionally designed products to frustrate the exercise of parental responsibility by their minor users' parents. Parents have a right to monitor their children's social media activity to protect them from harm. Defendants have designed products that make it difficult, if not impossible, for parents to exercise parental responsibility.

160. Defendants' products are also defective for lack of parental controls, permission,

1 and monitoring capability available on many other devices and applications.

2 161. Defendants' products are designed with specific product features intended to  
3 prevent and/or interfere with parents' reasonable and lawful exercise of parental control,  
4 permission, and monitoring capability available on many other devices and applications.

5 **D. Intentional Direction of Minor Users to Harmful and Exploitative Content**

6 162. Default "recommendations" communicated to new minor users, including Selena  
7 Rodriguez, purposefully steered her toward content Defendants knew to be harmful to children of  
8 her age and gender.

9 163. Advertising content pushed to new minor users, including Selena Rodriguez,  
10 because of their age and vulnerability, purposefully steer those users toward content Defendants  
11 know to be harmful to children of their age and gender.

12 **E. Inadequate Protection of Minors from Sexual Exploitation and Abuse**

13 164. Defendants' products are not reasonably safe because they do not protect minor  
14 users from sexually explicit content and images, report sex offenders to law enforcement, or allow  
15 users' parents to readily report abusive users to law enforcement.

16 165. Parents do not expect their children will use Defendants' products to exchange  
17 sexually explicit content and images and minor users do not expect that prurient adults pose as  
18 minors for malign purposes or that exchange of such content will be deleterious to their personal  
19 safety and emotional health.

20 166. Minor users of Defendants' products lack the cognitive ability and life experience  
21 to identify online grooming behaviors by prurient adults and the psychosocial maturity to decline  
22 invitations to exchange salacious material.

23 167. Defendants' products are unreasonably dangerous and defective as designed

1 because they allow minor children to use “public” profiles, in many cases default “public” profiles,  
2 that can be mass-messed by anonymous and semi-anonymous adult users for the purposes of  
3 sexual exploitation and grooming, including the sending of encrypted, disappearing messages and  
4 cash rewards through Defendants’ integrated design features.

5 **F. Design of Addictive Social Media Products**

6 168. As designed, Defendants’ social media products are addictive to minor users as  
7 follows: When minors use design features such as “likes” or “streaks” it causes their brains to  
8 release dopamine, which creates short term euphoria. However, as soon as dopamine is released,  
9 minor users’ brains adapt by reducing or “downregulating” the number of dopamine receptors that  
10 are stimulated and their euphoria is countered by dejection. In normal stimulatory environments,  
11 this dejection abates, and neutrality is restored. However, Defendants’ algorithms are designed to  
12 exploit users’ natural tendency to counteract dejection by going back to the source of pleasure for  
13 another dose of euphoria. As this pattern continues over a period of months and the neurological  
14 baseline to trigger minor users’ dopamine responses increases, they continue to use Instagram, not  
15 for enjoyment, but simply to feel normal. Once they stop using Instagram, minor users experience  
16 the universal symptoms of withdrawal from any addictive substance including anxiety, irritability,  
17 insomnia, and craving.

18 169. Addictive use of social media by minors is psychologically and neurologically  
19 analogous to internet gaming disorder as described in the American Psychiatric Association's 2013  
20 *Diagnostic and Statistical Manual of Mental Disorders* (DSM-5), which is used by mental health  
21 professionals to diagnose mental disorders. Gaming addiction is a recognized mental health  
22 disorder by the World Health Organization and International Classification of Diseases and is  
23 functionally and psychologically equivalent to social media addiction.

1           170. The diagnostic symptoms of social media addiction among minors are the same as  
2 the symptoms of addictive gaming referenced in DSM 5 and include:

- 3           a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety,  
4 irritability) when device is taken away or not possible.
- 5           b. Tolerance, the need to spend more time using social media to satisfy the urge.
- 6           c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- 7           d. Giving up other activities, loss of interest in previously enjoyed activities due to  
8 social media usage.
- 9           e. Continuing to use social media despite problems.
- 10          f. Deceiving family members or others about the amount of time spent on social  
11 media.
- 12          g. The use of social media to relieve negative moods, such as guilt or hopelessness;  
13 and
- 14          h. Jeopardized school or work performance or relationships due to social media usage.

15          171. Defendants' advertising profits are directly tied to the quantity of their users' online  
16 time and engagement, and their algorithms and other product features are designed to maximize  
17 the time users spend using the product by directing them to content that is progressively more and  
18 more stimulative. Defendants enhance advertising revenue by maximizing users' time online  
19 through a product design that addicts them to the platform. However, reasonable minor users and  
20 their parents do not expect that online social media platforms are psychologically and  
21 neurologically addictive.

22          172. It is feasible to make Defendants' products not addictive to minor users by turning  
23 off the algorithms, limiting the frequency and duration of access, and suspending service during

1 sleeping hours. Designing software that limits the frequency and duration of minor users' screen  
2 use and suspends service during sleeping hours could be accomplished at negligible cost; whereas  
3 the benefit of minor users maintaining healthy sleep patterns would be a significant reduction in  
4 depression, attempted and completed suicide, and other forms self-harm among this vulnerable  
5 age cohort.

6 **G. Inadequate Notification of Parents of Dangerous and Problematic Social Media**  
7 **Usage by Minor Users**

8 173. Defendants' products are not reasonably safe as designed because they do not  
9 include any safeguards to notify users and their parents of usage that Defendants know to be  
10 harmful and likely to cause negative mental health effects to users, including excessive passive  
11 use and use disruptive of normal sleep patterns.

12 174. It is reasonable for parents to expect that social media products that actively  
13 promote their platforms to minors will undertake reasonable efforts to notify parents when their  
14 child's use becomes excessive or occurs during sleep time. It is feasible for Defendants to design  
15 products that identify a significant percentage of its minor users who are using the product more  
16 than three hours per day or using it during sleeping hours at negligible cost.

17 175. Defendants' products are not reasonably safe as designed because, despite  
18 numerous reported instances of child sexual solicitation and exploitation by adult users,  
19 Defendants have not undertaken reasonable design changes to protect underage users from this  
20 abuse, including notifying parents of underage users when they have been messaged or solicited  
21 by an adult user or when a user has sent inappropriate content to minor users. Defendants' entire  
22 business is premised upon collecting and analyzing user data and it is feasible to use Defendants'  
23 data and algorithms to identify and restrict improper sexual solicitation, commercial sex acts,

1 exploitation, and abuse by adult users.

2 176. It is reasonable for parents to expect that platforms such as Instagram, Snapchat,  
3 and TikTok which actively promote their services to minors, will undertake reasonable efforts to  
4 identify users suffering from mental injury, self-harm, or sexual abuse and implement  
5 technological safeguards to notify parents by text, email, or other reasonable means that their child  
6 is in danger.

7 177. As a proximate result of these dangerous and defective design attributes of  
8 Defendants' products, Selena Rodriguez suffered severe mental harm, leading to physical injury  
9 and death, from her use of Instagram, TikTok, and Snapchat.

10 178. As a result of these defective design attributes of Defendants' products, Selena  
11 Rodriguez has suffered serious damages in the form of emotional distress, diagnosed mental health  
12 conditions, medical expenses, loss of income and earning capacity, pain and suffering, and  
13 reputational harm.

14 179. As a result of these dangerous and defective design attributes of Defendants'  
15 products, Plaintiff Tammy Rodriguez has suffered loss of consortium, emotional distress, past and  
16 future medical expenses, and pain and suffering.

17 180. Defendants are further liable to Plaintiff for punitive damages based upon the  
18 willful and wanton design of their products that were intentionally marketed and sold to underage  
19 users, whom they knew would be seriously harmed through their use of Instagram, TikTok, and  
20 Snapchat.

## 21 **H. Defendants' Creation of Harmful Content**

22 181. Defendants create and/or license images, GIFs, music, audio, and video content that  
23 materially contribute to the creation and/or development of the content in social media postings

that minor users such as Selena Rodriguez send and receive.

182. The images, GIFs, music, audio, and video content created and/or licensed by Defendants and incorporated into their social media platforms are substantial factors in making Defendants' social media products addictive to minor users such as Selena Rodriguez. Without images, GIFs, music, audio, and video content created and/or licensed by Defendants and incorporated into their social media platforms, minor users would not experience the level of dopamine response that renders Defendants' social media products addictive. The images, GIFs, music, audio, and video content created and/or licensed by Defendants and incorporated into their social media platforms therefore make Defendants' social products unreasonably dangerous in violation of Connecticut and California law and substantially contribute to the product defect claims alleged herein.

183. The images, gifs, music, audio and video content images, GIFs, music, audio, and video content created and/or licensed by Defendants and incorporated into their social media platforms substantially contribute to the psychologically harm experienced by minor users such as Selena Rodriguez. Without images, GIFs, music, audio, and video content created and/or licensed by Defendants and incorporated into their social media platforms, minor users would not experience the level of psychological distress they sustain from Defendants' social media products. The images, GIFs, music, audio, and video content created and/or licensed by Defendants and incorporated into their social media platforms therefore make Defendants' social products unreasonably dangerous in violation of Connecticut and California law and substantially contribute to the product defect claims alleged herein.

## **COUNT II – STRICT PRODUCT LIABILITY (Failure to Warn)**

184. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 183

as if fully stated herein.

185. Meta's product is defective because of inadequate instructions or warnings because the foreseeable risks of harm posed by the product could have been reduced or avoided by the provision of reasonable instructions or warnings by the manufacturer and the omission of the instructions or warnings renders the product not reasonably safe. This defective condition rendered the product unreasonably dangerous to persons or property, existed at the time the product left Defendant's control, reached the user or consumer without substantial change in the condition in which it was sold, and was a cause of Selena Rodriguez's injury.

186. Snapchat's product is defective because of inadequate instructions or warnings because the foreseeable risks of harm posed by the product could have been reduced or avoided by the provision of reasonable instructions or warnings by the manufacturer and the omission of the instructions or warnings renders the product not reasonably safe. This defective condition rendered the product unreasonably dangerous to persons or property, existed at the time the product left Defendant's control, reached the user or consumer without substantial change in the condition in which it was sold, and was a cause of Selena Rodriguez's injury.

187. TikTok's product is defective because of inadequate instructions or warnings because the foreseeable risks of harm posed by the product could have been reduced or avoided by the provision of reasonable instructions or warnings by the manufacturer and the omission of the instructions or warnings renders the product not reasonably safe. This defective condition rendered the product unreasonably dangerous to persons or property, existed at the time the product left Defendant's control, reached the user or consumer without substantial change in the condition in which it was sold, and was a cause of Selena Rodriguez's injury.

188. Defendants' products are unreasonably dangerous and defective because they

1 contain no warning to users or parents regarding the addictive design and effects of Snapchat,  
2 Instagram, and TikTok.

3 189. Defendants' social media products rely on highly complex and proprietary  
4 algorithms that are both undisclosed and unfathomable to ordinary consumers who do not expect  
5 that social media platforms are physically and/or psychologically addictive.

6 190. The magnitude of harm from addiction to Defendants' products is horrific, ranging  
7 from simple diversion from academic, athletic, and face-to-face socialization to sleep loss, severe  
8 depression, anxiety, self-harm, and suicide.

9 191. The harms resulting from minors' addictive use of social media platforms have  
10 been not only well-documented in the professional and scientific literature, but Meta had actual  
11 knowledge of such harms. On information and belief, Snap and TikTok have also conducted  
12 internal studies documenting the addictive quality and harmful effects of its social media products  
13 on minor users.

14 192. Defendants' products are unreasonably dangerous because they lack any warnings  
15 that foreseeable product use can disrupt healthy sleep patterns or specific warnings to parents when  
16 their child's product usage exceeds healthy levels or occurs during sleep hours. Excessive screen  
17 time is harmful adolescents' mental health and sleep patterns and emotional well-being.  
18 Reasonable and responsible parents are not able to accurately monitor their child's screen time  
19 because most adolescents own or can obtain access to mobile devices and engage in social media  
20 use outside their parents' presence.

21 193. It is feasible for Defendants' products to report the frequency and duration of their  
22 minor users' screen time to their parents without disclosing the content of communications at  
23 negligible cost, whereas parents' ability to track the frequency, time and duration of their minor

child's social media use are better situated to identify and address problems arising from such use and to better exercise their rights and responsibilities as parents.

194. Defendants knew about these harms, knew that users and parents would not be able to safely use their products without warnings, and failed to provide warnings that were adequate to make the products reasonably safe during ordinary and foreseeable use by minors.

195. As a result of Defendants' failure to warn, Selena Rodriguez suffered severe mental harm, leading to physical injury, from her use of Instagram, Snapchat, and TikTok.

196. As a result of Defendants' failure to warn, Selena Rodriguez suffered serious damages in the form of emotional distress, diagnosed mental health conditions, medical expenses, loss of income and earning capacity, pain and suffering, and reputational harm.

197. As a result of Defendants' failure to warn, Plaintiff Tammy Rodriguez has suffered loss of consortium, emotional distress, past and future medical expenses, and pain and suffering.

198. Defendants are further liable to Plaintiff for punitive damages based upon their willful and wanton failure to warn of known dangers of their products that were intentionally marketed and sold to minor users, whom they knew would be seriously harmed through their use of Instagram, TikTok, and Snapchat.

### COUNT III – NEGLIGENCE

199. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 198 as if fully stated herein.

200. At all relevant times, Defendants had a duty to exercise reasonable care and caution to protect users from foreseeable harms arising out of use of their social media products.

201. Defendants owe a heightened duty of care to minor users of their social media products because adolescents' brains are not fully developed, which results in a diminished

1 capacity to make good decisions regarding their social media usages, eschew self-destructive  
2 behaviors, and overcome emotional and psychological harm from negative and destructive social  
3 media encounters. Defendants intentionally designed and marketed their social media platforms to  
4 be both attractive and harmful to underage users, sometimes referred to an “attractive nuisance.”  
5 Rather than take reasonable precautions to prevent minors from harmful and problematic  
6 behaviors, Defendant intentionally designed its platforms to attract and addict vulnerable minor  
7 users.

8         202. As California product manufacturers marketing and selling products to residents of  
9 Connecticut, Defendants owed a duty to exercise ordinary care in the manufacture, marketing, and  
10 sale of their products, including a duty to warn minor users and their parents of hazards that  
11 Defendants knew to be present, but not obvious, to underage users and their parents.

12         203. As business owners, Defendants owe their users—who visit Defendants’ social  
13 media platforms and from whom Defendants derive billions of dollars per year in advertising  
14 revenue—a duty of ordinary care substantially similar to that owed by physical business owners  
15 to their business invitees.

16         204. Defendants were negligent, grossly negligent, reckless, and/or careless in that they  
17 failed to exercise ordinary care and caution for the safety of underage users, like Selena Rodriguez,  
18 using their Instagram, TikTok, and Snapchat products.

19         205. Defendants were negligent in failing to conduct adequate testing and failing to  
20 allow independent academic researchers to adequately study the effects of their products and levels  
21 of problematic use amongst minor users. Defendants’ have extensive internal research indicating  
22 that their products are harmful, cause extensive mental harm, and that minor users are engaging in  
23 problematic and addictive use that their parents are helpless to monitor and prevent.

206. Defendants were negligent in creating and/or licensing images, GIFs, music, audio, and video content that materially contribute to the creation and/or development of the content in social media postings that minor users such as Selena Rodriguez send and receive and substantially contribute to the minor users' addiction to Defendants' social media products and the psychologically harm experienced by minor users such as Selena Rodriguez.

207. Defendants were negligent in failing to provide adequate warnings about the dangers associated with the use of social media products and in failing to advise users and their parents about how and when to safely use their social media platforms and features.

208. Defendants were negligent in failing to fully assess, investigate, and restrict the use of Instagram, Snapchat, and TikTok by adults to sexually solicit, abuse, manipulate, and exploit minor users of their Instagram, Snapchat, and TikTok products.

209. Defendants were negligent in failing to provide users and parents the tools to ensure their social media products were used in a limited and safe manner by underage users.

210. As a result of Defendants' negligence, Selena Rodriguez suffered severe mental harm, leading to physical injury and death, from her use of and exposure to Instagram, TikTok, and Snapchat.

211. As a result of Defendants' negligence, Selena Rodriguez suffered serious damages in the form of emotional distress, diagnosed mental health conditions, medical expenses, loss of income and earning capacity, pain and suffering, and reputational harm.

212. As a result of Defendants' negligence, Plaintiff Tammy Rodriguez has suffered loss of consortium, emotional distress, past and future medical expenses, and pain and suffering.

213. Defendants are further liable to Plaintiff for punitive damages based upon their willful and wanton conduct toward underage users, including Selena Rodriguez, whom they knew

would be seriously harmed through the use of Instagram, TikTok, and Snapchat.

**COUNT IV – VIOLATIONS OF CALIFORNIA’S UNFAIR COMPETITION LAW**

**(Cal. Bus. & Prof Code §§ 17200, *et seq.*)**

214. Plaintiff realleges each and every allegation contained in paragraphs 1 through 213 as if fully stated herein.

215. Defendants are each a “person” as defined under California Business & Professions Code § 17201.

216. The UCL prohibits all conduct that is unlawful, unfair, or fraudulent.

217. Defendants’ conduct is unlawful as set forth in Counts I-III, above.

218. Defendants engaged in fraudulent and deceptive business practices in violation of the UCL by promoting products to underage users, including Selena Rodriguez, while concealing critical information regarding the addictive nature and risk of harm these products pose. Defendants knew and should have known that their statements and omissions regarding the addictive and harmful nature of their products were misleading and therefore likely to deceive the members of the public who use Defendants’ products and who permit their underage children to use Defendants’ products. Had Plaintiff known of the dangerous nature of Defendants’ products, she would have taken early and aggressive steps to stop or limit her daughter’s use of Defendants’ products.

219. Defendants’ practices are unfair and violate the UCL because they offend established public policy, and because the harm these practices cause to consumers greatly outweighs any benefits associated with them.

220. Defendants’ conduct has resulted in a substantial injury that Plaintiff could not reasonably have avoided because of Defendants’ deceptive conduct. This substantial harm is not

1 outweighed by any countervailing benefits to consumers or competition.

2       221. As a direct and proximate result of the foregoing acts and practices, Defendants  
3 have received, or will receive, income, profits, and other benefits, which they would not have  
4 received if they had not engaged in the violations of the UCL described in herein. As a direct and  
5 proximate result of the foregoing acts and practices, Defendants have also obtained an unfair  
6 advantage over similar businesses that have not engaged in such practices.

7       222. As a result of Defendants' UCL violations, Plaintiff suffered an injury in fact and  
8 lost money as set forth above and detailed in her prayer for relief.

9       223. Accordingly, Plaintiff seeks injunctive and equitable relief to halt and remedy  
10 Defendants' unlawful, fraudulent, and unfair conduct.

11                   **COUNT V – VIOLATION OF 18 U.S.C. § 1595 and 1591**

12                           **(Against all Defendants)**

13       224. Plaintiff realleges each and every allegation contained in paragraphs 1 through 223  
14 as if fully stated herein. Plaintiff brings claims under 18 U.S.C. § 1595 based on Defendants'  
15 financial benefit garnered from knowingly assisting, supporting, and facilitating the sexual  
16 solicitation and exploitation of Selena Rodriguez for commercial sex acts. Defendants knowingly  
17 used the instrumentalities of interstate commerce to violate 18 U.S.C. § 1591. Defendants  
18 knowingly received something of value from participation in a venture which recruits or entices a  
19 person knowing, or in reckless disregard of the fact, that Selena Rodriguez had not attained the  
20 age of 18 years and was caused to engage in a commercial sex act as defined by 18 U.S.C. §  
21 1591(a).

22       225. Defendants are aware of, and knowingly benefit, from a large number of predatory  
23 users who regularly use Defendants' platforms to solicit and groom minor users such as Selena

Rodriguez into sexually compromising situations and lure them into being sexually exploited and trafficked for the purposes of commercial sex acts as defined in 18 U.S.C. § 1591.

226. Defendants had actual knowledge that Selena Rodriguez was under the age of 13 based on her user history, photographs, and videos, and repeated statements made on Defendants' social media platforms—including to several adult men with whom she was exchanging sexually explicit material—that she was underage. Defendants also had actual knowledge that the men with whom she was communicating on their platforms were adults based on their user history and profiles. Defendants' technology provided them with actual knowledge that Selena was exchanging sexually explicit photographs and video with adult men in a manner that constituted commercial sex acts under 18 U.S.C. § 1591.

227. Defendants have designed and marketed their products in such a way as to appeal to and make clear that predatory users may use their products for these illegal purposes. This includes, for example, Snapchat's development and marketing of disappearing messages (which feature Instagram also now offers). Many of Defendants' users are sexual predators—adults who use Defendants' products to prey on underage children, including children as young as Selena Rodriguez, who was only 10 years old when she started using Defendants' products.

228. Defendants' greatest source of revenue also comes from advertisements, and Defendants are paid in direct correlation to how much time a user stays on their product. Defendants lack the financial incentive to create a product that denies access to underage users and, likewise, Defendants make money each time their predatory users solicit, exploit, or otherwise engage young children through their social media platforms.

229. Defendants have failed to undertake reasonable efforts to redesign their social media platforms to protect their minor users, such as Selena Rodriguez, against such harms.

230. To the contrary, Defendants knowingly provide sexual predators with tools such as anonymity, encrypted and/or disappearing messaging, selected content involving minors, financial transfer, and location features that are used by adults to target minor users for commercial sex acts. Defendants' products are designed to and do work in concert with each other. Defendants know that these tools in its social media platforms make it easier for adult predators to efficiently and anonymously identify and recruit large numbers of minors to engage in commercial sex acts than if these abusers did not have access to Defendants' platforms.

231. For example, a common practice among predatory users is to find a minor user through Instagram's public profile, recommendation, and other information sharing features. Once contact is established, the predator asks "What's your Snap" or a similar question, designed to obtain the child's Snapchat information. Or, in cases where the child does not have a Snapchat account, the predator will encourage them to open one. The predator then moves the discussion onto Snapchat because they know that Snapchat's product design and practices will enable them to send harmful and illegal content to minors that then simply disappears.

232. Defendants knowingly implemented policies and design features that obstructed, interfered with, and prevented the enforcement of the child sexual exploitation protections set forth in 18 U.S.C. § 1591.

233. As a result of Defendants' violations of 18 U.S.C. § 1595 and 1591, Selena Rodriguez suffered severe mental harm, leading to physical injury, emotional harm, and death from sexual exploitation and solicitation of commercial sex acts directed toward her because of Instagram, Snapchat, and TikTok and, specifically, because of the defects and/or inherently dangerous features and design of Defendants' products.

234. As a result of Defendants' violations of 18 U.S.C. § 1595 and 1591, Tammy

Rodriguez has suffered loss of consortium, emotional distress, past and future medical expenses, and pain and suffering.

235. As a result of Defendants' violations of 18 U.S.C. § 1595 and 1591, Plaintiff is entitled to full compensatory and punitive damages against Defendants for the mental and physical injuries suffered by Selena Rodriguez.

236. Defendants are further jointly and severally liable to Plaintiff for punitive damages and attorneys' fees and costs based upon their knowing, intentional, willful, and wanton conduct toward Selena Rodriguez and other minor users whom they knew were being seriously harmed through improper solicitation for commercial sex acts through the use of, or threatened use of, force, fraud, and/or coercion through Instagram, Snapchat, and TikTok.

### **DEMAND FOR JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **PRAYER FOR RELIEF**

WHEREFORE, Plaintiff prays for judgment against Defendants for relief as follows:

- a) Past physical and mental pain and suffering of Selena Rodriguez, in an amount to be more readily ascertained at the time and place set for trial;
- b) Loss of enjoyment of life, in an amount to be more readily ascertained at the time and place set for trial;
- c) Past medical care expenses for the care and treatment of the injuries sustained by Selena Rodriguez, in an amount to be more readily ascertained at the time and place set for trial;
- d) Past and future impairment to capacity to perform everyday activities;
- e) Plaintiff's pecuniary loss and loss of Selena Rodriguez's services, comfort, care, society, and companionship to Tammy Rodriguez;

- f) Loss of future income and earning capacity of Selena Rodriguez;
- g) Punitive damages;
- h) Injunctive relief, including, but not limited to, ordering Defendants to stop the harmful conduct alleged herein, remedy the unreasonably dangerous algorithms in their social media products, and provide warnings to minor users and their parents that Defendants' social media products are addictive and pose a clear and present danger to unsuspecting minors;
- i) Reasonable costs and attorney and expert/consultant fees incurred in prosecuting this action; and
- j) Such other and further relief as this Court deems just and equitable.

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta

1 subsidiary, current or former, is responsible for specific conduct is knowledge solely within  
2 Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the  
3 discovery phase.

4       3. Meta knowingly exploited its most vulnerable users—children throughout the  
5 world—to drive corporate profit. Meta operates the world's largest family of social networks,  
6 enabling billions of users worldwide to connect, view, and share content through mobile devices,  
7 personal computers, and virtual reality headsets. A user does not have to pay to create an account.  
8 Instead of charging account holders to access the platform, Meta became one of the world's most  
9 valuable companies from the sale of advertisement placements to marketers across its various  
10 platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion  
11 from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such  
12 revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble  
13 virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This  
14 data collection and analysis allows advertisers to micro-target advertising and advertising dollars to  
15 very specific categories of users, who can be segregated into pools or lists using Meta's data  
16 segments. Only a fraction of these data segments come from content that is explicitly designated by  
17 users for publication or explicitly provided by users in their account profiles. Many of these data  
18 segments are collected by Meta through surveillance of each user's activity on the platform and off  
19 the platform, including behavioral surveillance that users are not even aware of, like navigation  
20 paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time  
21 the users spend on the database, and the more detailed information that Meta can extract from its  
22 users, the more money Meta makes.

23       4. Defendants have intentionally designed their products to maximize users' screen  
24 time, using complex algorithms designed to exploit human psychology and driven by advanced  
25 computer algorithms and artificial intelligence available to two of the largest technology companies  
26 in the world. Defendants have progressively modified their products to promote problematic and  
27  
28

excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the [www.Facebook.com](https://www.facebook.com) (“Facebook”) and [www.Instagram.com](https://www.instagram.com) (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world's social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America's youth use Instagram.

7. A user's "feed" on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

1           10. Facebook and Instagram notify users through text and email of activity that might be  
2 of interest, which is designed to and does prompt users to open Facebook and Instagram and be  
3 exposed to content selected by the platforms to maximize the length of time and amount of content  
4 viewed by the user. Facebook and Instagram include many other harm causing features, as discussed  
5 below.

6           11. Plaintiff brings claims of strict liability based upon Defendants' defective design of  
7 their social media products that renders such products not reasonably safe for ordinary consumers in  
8 general and minors in particular. It is technologically feasible to design social media products that  
9 substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising  
10 from their foreseeable use of Defendants' products with a negligible increase in production cost.

11           12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide  
12 adequate warnings to minor users and their parents of the danger of mental, physical, and emotional  
13 harms arising from the foreseeable use of their social media products.

14           13. Plaintiff also brings claims for common law negligence arising from Defendants'  
15 unreasonably dangerous social media products and their failure to warn of such dangers. Defendants  
16 knew or, in the exercise of ordinary care, should have known that their social media products were  
17 harmful to a significant percentage of their minor users and failed to re-design their products to  
18 ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable  
19 use of their products. Defendants intentionally created an attractive nuisance to children, but  
20 simultaneously failed to provide adequate safeguards from the harmful effects they knew were  
21 occurring.

22           14. The addictive qualities of Defendants' products and their harmful algorithms are not  
23 fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned  
24 the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former  
25 Facebook employee turned whistleblower, came forward with internal documents showing that Meta  
26 was aware that its platforms and products cause significant harm to its users, especially children.  
27 Rather than making meaningful changes to safeguard the health and safety of its adolescent users,  
28

Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## II. JURISDICTION AND VENUE

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of California and purposely avail themselves of the benefits of transacting business with California residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of California and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of California relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of California.

18. Defendants advertise extensively in California, through contractual relationships with third-party "partners" who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their products to users under the age of 13, by encouraging and allowing its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in California for whom those devices are intended.

### 7 **III. PARTIES**

8 **Plaintiff**

9 || 21. Plaintiff Autumn Seekford is an adult individual residing in Front Royal, Virginia.

1           22.     Meta is a Delaware corporation and multinational technology conglomerate, having  
2     its principal place of business in Menlo Park, California.

**Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

23           24.       Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11,  
24       2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding  
25       company for entities involved in Meta’s supporting and international endeavors, and its principal  
26       place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive

1 decision-making. These regions of the brain are central to the process of planning and decision-  
2 making, including the evaluation of future consequences and the weighing of risk and reward. They  
3 are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that  
4 the prefrontal cortex is one of the last regions of the brain to mature. During childhood and  
5 adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination,  
6 the process through which the neural pathways connecting different parts of the brain become  
7 insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain  
8 is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural  
9 connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work  
10 faster and more efficiently, improving the “executive” functions of the frontal lobes, including  
11 impulse control and risk evaluation. This shift in the brain’s composition continues throughout  
12 adolescence and into young adulthood. In late adolescence, important aspects of brain maturation  
13 remain incomplete, particularly those involving the brain’s executive functions and the coordinated  
14 activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for  
15 control of impulses and emotions and mature, considered decision-making is still developing during  
16 adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

17       31. Because adolescence is the period when sophisticated, essential inhibitory control  
18 functions are being established, the onset of prolonged exposure to toxic content during adolescence  
19 is particularly concerning. The extended development of the prefrontal cortex results in an adolescent  
20 brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term,  
21 irremediable effects of adverse influences, including addiction and a fractured psychological well-  
22 being.

23       32. The algorithms in Defendants’ social media products exploit minor users’ diminished  
24 decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused  
25 by users’ incomplete brain development. Defendants know, or in the exercise of reasonable care  
26 should know, that because their minor users’ frontal lobes are not fully developed, such users are  
27 much more likely to sustain serious physical and psychological harm through their social media use  
28

1 than adult users. Nevertheless, Defendants have failed to design their products with any protections  
2 to account for and ameliorate the psychosocial immaturity of their minor users.

3 33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their  
4 individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their  
5 own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to  
6 affiliate with and emulate the personalities, images, behaviors, and preferences of those that they  
7 would like to become. During the teenage years, relationships with family members often take a back  
8 seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social  
9 approval, and become “popular.” Many teens feel deep insecurity and are self-conscious. They feel  
10 people are constantly focused on them, examining them, and judging them about everything they say  
11 and do. They struggle with the inexorable desire to be accepted and admired by their teen peers, and  
12 their biggest fear is to not fit in. This myopic desire to fit in predispositions teenagers to frequently  
13 engage in upward social comparison processes, that is, identifying and observing others that appear  
14 to be experiencing more positive outcomes, and consequently feeling worse about themselves and  
15 their own perceived shortcomings.

16 34. Today’s adolescents are part of Generation Z (which is loosely defined as people born  
17 between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely  
18 post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are  
19 just turning 24 this year; however, the substantial majority are believed to be still going through  
20 adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another  
21 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent  
22 of high school students said they used a social-media platform daily, and 24 percent said that they  
23 were online “almost constantly.”<sup>1</sup>

28

1           35.     One way that Meta’s platforms addict minors is as follows: When minors use design  
2 features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon  
3 as dopamine is released, their euphoria is countered by dejection: minor users’ brains adapt by  
4 reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal  
5 stimulatory environments, neutrality is restored after this dejection abates. However, Defendants’  
6 algorithms are designed to exploit users’ natural tendency to counteract dejection by going back to  
7 the source of pleasure for another dose of euphoria.

8           36.     Eventually, as this pattern continues over a period of days, weeks, and months, the  
9 neurological baseline to trigger minor users’ dopamine responses increases. Minors then continue to  
10 use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users attempt  
11 to stop using Defendants’ social media products, they experience the universal symptoms of  
12 withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

13           37.     Addictive use of social media by minors is psychologically and neurologically  
14 analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American  
15 Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used  
16 by mental health professionals to diagnose mental disorders) and is a recognized mental health  
17 disorder by the World Health Organization and International Classification of Diseases. The  
18 diagnostic symptoms of social media addiction among minors are the same as the symptoms of  
19 addictive gaming promulgated in DSM 5 and include:

- 20           a.     Preoccupation with social media and withdrawal symptoms (sadness, anxiety,  
21                    irritability) when device is taken away or use is not possible (sadness, anxiety,  
22                    irritability).
- 23           b.     Tolerance, the need to spend more time using social media to satisfy the urge.
- 24           c.     Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- 25           d.     Giving up other activities, loss of interest in previously enjoyed activities due  
26                    to social media usage.
- 27           e.     Continuing to use social media despite problems.
- 28

- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's key

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

1 features that make the platforms highly addictive include the use of intermittent variable rewards  
2 (“IVR”) and its Facial Recognition System (“FRS”).

3 42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering  
4 stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and  
5 strengthens the addiction with each payout. The easiest way to understand this term is by imagining  
6 a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable  
7 reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone  
8 has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or  
9 shared either of your posts. As explained below, Meta spaces out notifications of likes and comments  
10 into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the  
11 platforms’ addictiveness.

12 43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to  
13 describe the supply and demand of a person’s attention, which is a highly valuable commodity for  
14 internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its  
15 “Like” button; Instagram launched that same year and came ready-made with a like function shaped  
16 as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments,  
17 posts, shares, and other dopamine-triggering content. Instagram’s notification algorithm delays  
18 notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These  
19 designs take advantage of users’ dopamine-driven desire for social validation and optimizes the  
20 balance of negative and positive feedback signals to addict users.

21 44. Other psychological manipulations used to intertwine social media users include, but  
22 are not limited to: (1) the FRS system, which has already collected for distribution to various third-  
23 parties a billion individual facial recognition templates and is otherwise used by Meta to identify and  
24 tag people in photos; (2) Meta’s use of wavy dots to reflect that someone is currently writing you a  
25 message, which is designed to keep you on the platform until you receive the message or shorten the  
26

27 <sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more  
28 effective its advertising space becomes, allowing it to charge advertisers more.

1 time for you to return and check for a message; and (3) the concept of social reciprocity, a variance  
2 of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which  
3 encourages the receivers to respond—because the sender knows the message has been read—and  
4 simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum,  
5 this perilous amalgamation of intense psychological vulnerability and targeted exploitation  
6 foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not  
7 limited to, social media addiction, withdrawal—from friends, family, and social and academic  
8 advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating  
9 disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain,  
10 self-harm, and suicide among other harms.

11 **B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

12 45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in  
13 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under  
14 which commercial web sites that either target children under age 13 or have actual knowledge of  
15 children under age 13 using their site can collect and use information about them. As a result of  
16 COPPA, website operators must obtain “verifiable parental consent” from parents prior to the  
17 collection and use of information about children under age 13. Meta has chosen to avoid these  
18 obligations by purporting to ban all those younger than 13 through its terms of service.

19 46. Meta states that children under the age of thirteen are prohibited from having Meta  
20 accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta  
21 has known that its age-verification protocols are largely inadequate, then estimating that it removes  
22 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as  
23 Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated  
24 that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

25 47. Defendants do not charge their users to use their platforms, but instead receive money  
26 from advertisers who pay a premium to target advertisements to specific categories of people as  
27 studied and sorted by Meta’s algorithms. Thus, Defendants generate revenue based upon the total time  
28

1 spent on the application, which directly correlates with the number of advertisements that can be  
2 shown to each user.

3       48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin  
4 board, where content was published by authors. But Meta has evolved over time with the addition of  
5 numerous features and products designed by Meta to engage users. The earliest of these—the search  
6 function and the “like” button—were primarily user-controlled features. In more recent years,  
7 however, Meta has taken a more active role in shaping the user-experience on the platform with more  
8 complex features and products. The most visible of these are curated recommendations, which are  
9 pushed to each user in a steady stream as the user navigates the website, and in notifications sent to  
10 the user’s smartphone and email addresses when the user is disengaged with the platform. These  
11 proprietary Meta products include News Feed (a newsfeed of stories and posts published on the  
12 platform, some of which are posted by your connections, and others that are suggested for you by  
13 Meta), People You May Know (introductions to persons with common connections or background),  
14 Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to  
15 join). These curated and bundled recommendations are developed through sophisticated algorithms.  
16 As distinguished from the earliest search functions that were used to navigate websites during the  
17 Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs.  
18 Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform)  
19 and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical  
20 designations), make assumptions about that user’s interests and preferences, make predictions about  
21 what else might appeal to the user, and then make very specific recommendations of posts and pages  
22 to view and groups to visit and join based on rankings that will optimize Meta’s key performance  
23 indicators.

24       49. Equipped with ample information about the risks of social media, the ineffectiveness  
25 of its age-verification protocols, and the mental processes of teens, Meta has expended significant  
26 effort to attract preteens to its products, including substantial investments in designing products that  
27 would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity,  
28

1 so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup>  
2 Meta’s unabashed willingness to target children, in the face of its conscious, long-standing, plainly  
3 deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to  
4 maintain and increase its profit margin.

5 50. Faced with the potential for reduction in value due to its declining number of users, in  
6 or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from  
7 chronological ranking, which organized the interface according to when content was posted or sent,  
8 to prioritize Meaningful Social Interactions, or “MSI,” which emphasizes users’ connections’  
9 interactions, e.g., likes and comments, and gives greater significance to the interactions of connections  
10 that appeared to be the closest to users. To effectuate this objective, Facebook developed and  
11 employed an “amplification algorithm” to execute engagement-based ranking, which considers a  
12 post’s likes, shares, and comments, as well as a respective user’s past interactions with similar content,  
13 and exhibits the post in the user’s newsfeed if it otherwise meets certain benchmarks. The algorithm  
14 covertly operates on the proposition that intense reactions invariably compel attention. As it measures  
15 reactions and contemporaneously immerses users in the most reactive content, and negative content  
16 routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most  
17 negative content.

18 51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he  
19 demonstrated the correlation between engagement and sensational content that is so extreme that it  
20 impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

21  
22  
23  
24  
25 <sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

26  
27 <sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing content because it’ll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today’s youth.<sup>8</sup> Meta’s own in-depth analyses show significant mental-health issues

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

1 stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts  
2 and eating disorders to their experiences on the app.<sup>9</sup> Meta’s researchers have repeatedly found that  
3 Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation  
4 from 2019, Meta researchers concluded that “[w]e make body issues worse for one in three teen girls,”  
5 and “[t]eens blame Instagram for increases in the rate of anxiety and depression.” Similarly, in a  
6 March 2020 presentation posted to Meta’s internal message board, researchers found that “[t]hirty-  
7 two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel  
8 worse.” Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative  
9 social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the  
10 platform makes thoughts of “suicide and self-injury” worse. Seventeen percent of teen-girl Instagram  
11 users say the platform makes “[e]ating issues” worse. Instagram users are twice as likely to develop  
12 an eating disorder as those who don’t use social media.

13         54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware  
14 that, despite the platforms’ adverse impact to teenage users’ well-being, the absence of impulse  
15 control often renders teens powerless to oppose the platforms’ allure. Meta is conscious of the fact  
16 that the platform dramatically exacerbates bullying and other difficulties prevalent within the high  
17 school experience, as the reach of the same now affects users within the ideally otherwise safe  
18 confines of the home. The advent of social media largely occurred after today’s parents became adults,  
19 the consequence being a large swath of parents that lack the context needed to appreciate the  
20 contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient  
21 to effectively mitigate against it.

22         55. The shift from chronological ranking to the algorithm modified the social networking  
23 environment in such a way that it created a new iteration of the Meta experience, one that is  
24 profoundly more negative, one that exploits some of the known psychological vulnerabilities of  
25

26  
27 <sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>  
28

1 Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to  
2 the cohort's mental health and the related frequency of suicidal ideation.

3 56. Excessive screen time is harmful to adolescents' mental health, sleep patterns,  
4 emotional well-being. Defendants' products lack any warnings that foreseeable product use can  
5 disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage  
6 exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous.  
7 Reasonable and responsible parents are not able to accurately monitor their child's screen time  
8 because most adolescents own or can obtain access to mobile devices and engage in social media use  
9 outside their parents' presence.

10 57. Meta professes to have implemented protective measures to counteract the well-  
11 established dangers of its sites' customized, doggedly harmful content; however, its protocols apply  
12 only to content conveyed in English and removes only three-to-five percent of harmful content. Meta  
13 knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either  
14 unwilling or incapable of properly managing its platforms. This is consistent with its established  
15 pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation  
16 to create a suitable environment accessible only by its age-appropriate users, all in the interest of  
17 reaping obscene profit.

18 **C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as**  
19 **the Publisher or Speaker of Any Content Provided, Posted, or Created by Third**  
20 **Parties.**

21 58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and  
22 omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of  
23 dangerously defective social media products, not as the speaker or publisher of third-party content.

24 59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known  
25 dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely  
26 on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek  
27 to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the  
28 speech of others or for any attempts by Defendants to restrict access to objectionable content.

1           60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for  
2 what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

## V. PLAINTIFF-SPECIFIC ALLEGATIONS

62. Plaintiff Autumn Seekford is a nineteen year old woman who has been a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in  
addictive and problematic use of the platform(s). Plaintiff's interest in any activity other than viewing  
and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to Plaintiff 24 hours a day, Plaintiff began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to Plaintiff, initially a minor user of the Meta platform(s), Plaintiff subsequently developed injuries including, but not limited to, social media compulsion, attempted suicide, multiple periods of suicidal ideation, an eating disorder, depression, and a reduced inclination or ability to sleep.

24 66. Defendants have designed the Meta platforms(s) to allow minor users, as Plaintiff was,  
25 to become addicted to and abuse their products without the consent of the users' parents.

67. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to

1 prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta  
2 platform(s).

3 68. Plaintiff was not aware of the addictive and mentally harmful effects of the Meta  
4 platform(s) when Plaintiff began to use the products.

5 69. Defendants not only failed to warn Plaintiff of the dangers of addiction, sleep  
6 deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and  
7 non-addictive properties of their products. For example, the head of Instagram testified under oath at  
8 a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

9 70. As a result of Plaintiff's extensive and problematic use of the Meta platform(s), she  
10 has developed numerous mental health conditions that she still struggles with until this day.

## 11 VI. CAUSES OF ACTION

### 12 FIRST CAUSE OF ACTION

#### 13 PRODUCTS LIABILITY - NEGLIGENT DESIGN

14 71. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
15 set forth fully at length herein.

16 72. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
17 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
18 State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts,  
19 statutes, and laws of the State of Virginia.

20 73. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
21 inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the  
22 products and platforms that Plaintiff used.

23 74. Facebook and Instagram were designed and intended to be used as social media  
24 platforms.

25 75. DEFENDANTS knew or, by the exercise of reasonable care, should have known use  
26 of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a  
27 reasonably foreseeable manner, particularly so with minors and young adults.

1           76. DEFENDANTS knew or, by the exercise of reasonable care, should have known  
2 ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of  
3 Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and  
4 physical injuries as listed above.

5           77. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe  
6 product.

7           78. DEFENDANTS breached their duty by failing to use reasonable care in the design of  
8 Facebook and Instagram because the products were addictive; had mental, cognitive, and physical  
9 health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia,  
10 anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia  
11 nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty  
12 sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

13           79. DEFENDANTS breached their duty by failing to use reasonable care in the design of  
14 Facebook and Instagram by negligently designing the platforms with physically and mentally harmful  
15 features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed  
16 based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent  
17 variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the  
18 content of new users and users who have not posted in a while, among other features); (3) face  
19 tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more  
20 attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram  
21 "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform  
22 which are currently unknown and hidden from users and governments.

23           80. Engagement-based ranking and intermittent variable rewards are highly addictive,  
24 promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of  
25 viewing content that is innately harmful or in a manner that is harmful, and present a false reality.  
26 Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful  
27  
28

1 social comparison based on a misleading curation of peers' appearances, especially among teenage  
2 female users.

3 81. The collaboration of these features multiplies the platforms' power to inflict harm by  
4 heightening the platform's addictive nature, increasing exposure to content that triggers negative  
5 social comparison, exposing users to innately harmful content, increasing time of exposure to harm,  
6 further encouraging bullying and promoting conflict, and multiplying harm in other ways.

7 82. The features combine to create a user interface of endless, auto-playing image and  
8 video content, that is algorithmically sorted to place the most attention-grabbing content at the top  
9 and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content  
10 that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles,  
11 which causes negative physical or social comparison, especially among teens. Meta's algorithms also  
12 promote controversial, disturbing, negative, and/or emotionally charged content causing harm to  
13 users.

14 83. The combined result of these features is to present to users a false reality—it presents  
15 to users a world which is constantly controversial and negative; where most other people are  
16 exceedingly more attractive than the user; where most other people are exceedingly more successful  
17 and/or competent than the user; and which will facilitate and encourage harmful behaviors such as  
18 self-harm and eating disorders.

19 84. These features take advantage of biological systems, human behavior, and psychology,  
20 to addict and condition users to engage in repetitive, content-consuming actions such as scrolling,  
21 "liking," and sharing content in search of repeated dopamine releases. All the while, the users' input  
22 and behavior are tracked to allow the platform to automatically tune itself to each individual user to  
23 become as addictive and difficult to stop engaging with as possible.

24 85. Potential health harms from these features include, among other types of harm, social  
25 media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-  
26 harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating  
27  
28

1 disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye  
2 strain, among other harmful effects.

3 86. DEFENDANTS breached their duty by failing to use reasonable care in the design of  
4 Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to  
5 minors, who were particularly unable to appreciate the risks posed by the platforms.

6 87. DEFENDANTS breached their duty by failing to use reasonable care by failing to use  
7 cost effective, reasonably feasible alternative designs that would make the product less addictive and  
8 harmful to minors.

9 88. DEFENDANTS breached their duty by failing to use reasonable care by failing to use  
10 cost effective, reasonably feasible alternative designs to minimize these harms, including but not  
11 limited to:

- 12 a. Designing platforms that did not include the features listed above while still  
13 fulfilling the social, interest, and business networking purposes of a social media  
14 platform;
  - 15 b. Default protective limits to length of use, frequency of use, or content types;
  - 16 c. Opt-in restrictions to length of use, frequency of use, or content types;
  - 17 d. session time limits;
  - 18 e. Blocks to use during certain times of day (such as morning, during work or school  
19 periods, or during evenings);
  - 20 f. Session time notifications, warnings, or reports;
  - 21 g. Warning of health effects of use and extended use upon sign-up;
  - 22 h. Parental controls;
  - 23 i. Self-limiting tools;
  - 24 j. Implementing labels on images and videos that have been edited through the  
25 platform;
  - 26 k. Age-based content filtering;
  - 27 l. General content filtering;
- 28

- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

89. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

90. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

1           91. A reasonable company under the same or similar circumstances would have designed  
2 a safer product.

3           92. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS'  
4 failure to use reasonable care in the design of Facebook and Instagram. Such harm includes social  
5 media compulsion, attempted suicide, multiple periods of suicidal ideation, an eating disorder,  
6 depression, and a reduced inclination or ability to sleep, among other harmful effects.

7           93. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

8           94. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
9 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
10 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
11 suit, attorneys' fees, and all such other relief as the Court deems proper.

12                                   **SECOND CAUSE OF ACTION**  
13                                   **PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

14           95. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
15 set forth fully at length herein.

16           96. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
17 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
18 State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts,  
19 statutes, and laws of the State of Virginia.

20           97. At all relevant times, the DEFENDANTS designed, developed, managed, operated,  
21 inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the  
22 products and platforms that Plaintiff used.

23           98. The DEFENDANTS knew or, by the exercise of reasonable care, should have known  
24 use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a  
25 reasonably foreseeable manner, particularly with minors and young adults.

26           99. The DEFENDANTS knew or, by the exercise of reasonable care, should have known  
27 ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of  
28

100. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

101. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

102. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

104. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of

1 injuries described herein that were reasonably foreseeable at the time of design, development, coding,  
2 operation, and dissemination of the platforms.

3 105. Through their incredible power as the premier social media company (and/or  
4 association with that company), DEFENDANTS have silenced and suppressed information, research  
5 efforts, and public awareness efforts regarding the harmful health impact of their platforms.

6 106. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the  
7 platforms to aggressively socially and psychologically engineer new and ongoing users to increase  
8 addiction and exposure to their platforms, causing and increasing physical and psychological harm.  
9 The platforms encourage users to recruit more users across their personal electronic contacts.

10 107. The failure of DEFENDANTS to adequately warn about its defective products—and  
11 its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created  
12 a danger of injuries described herein that were reasonably foreseeable at the time of design,  
13 distribution, and operation of the platforms.

14 108. At all relevant times, DEFENDANTS could have provided adequate warnings and  
15 instructions to prevent the harms and injuries set forth herein, such as providing full and accurate  
16 information about the products in advertising, at point of dissemination/account registration, and at  
17 various intervals of the user interface.

18 109. A reasonable company under the same or similar circumstances would have warned  
19 and instructed of the dangers.

20 110. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to  
21 warn and instruct because she would not have used Facebook and Instagram had she received  
22 adequate warnings and instructions that the platforms could cause social media addiction, depression,  
23 body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating  
24 disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus,  
25 ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other  
26 harmful effects.

1 111. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate  
2 and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

3 112. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
4 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
5 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
6 suit, attorneys' fees, and all such other relief as the Court deems proper.

7 **THIRD CAUSE OF ACTION**  
8 **PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

9 113. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
10 set forth fully at length herein.

11 114. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
12 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
13 State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts,  
14 statutes, and laws of the State of Virginia.

15 115. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
16 inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the  
17 products and platforms that Plaintiff used.

18 116. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the  
19 development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and  
20 Instagram.

21 117. DEFENDANTS knew or, by the exercise of reasonable care, should have known use  
22 of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and  
23 disseminated was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable  
24 manner.

25 118. DEFENDANTS knew or, by the exercise of reasonable care, should have known  
26 ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of  
27  
28

Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

119. Without limitation, examples of DEFENDANTS’ breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices (“GMPs”);
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms’ output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

120. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

121. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

122. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff’s harms.

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Virginia.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

127. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

128. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

129. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

130. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

1           131. DEFENDANTS knew or, by the exercise of reasonable care, should have known use  
2 of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a  
3 reasonably foreseeable manner, particularly with minors and young adults.

4           132. DEFENDANTS knew or, by the exercise of reasonable care, should have known  
5 ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of  
6 Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and  
7 physical injuries as listed above.

8           133. DEFENDANTS knew or, by the exercise of reasonable care, should have known that  
9 Facebook and Instagram posed risks including the risks of social media addiction, depression, body  
10 dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder,  
11 anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD,  
12 difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful  
13 effects, as described herein, that were known and knowable in light of scientific and medical  
14 knowledge that was generally accepted in the scientific community at the time of development,  
15 dissemination, public release, and operation of the platforms.

16           134. DEFENDANTS knew or should have known that Facebook and Instagram needed to  
17 be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed,  
18 advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available  
19 properly, without defects and with due care to avoid needlessly causing harm.

20           135. DEFENDANTS knew or should have known that Facebook and Instagram would  
21 cause harm to users if the following features, among others, were included: (1) engagement-based  
22 ranking (sorting content on a user's feed based on engagement or "meaningful social interactions"  
23 rather than chronology); (2) intermittent variable rewards (a system of "likes", comments,  
24 strategically-timed notifications, promoting the content of new users and users who have not posted  
25 in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters  
26 designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing  
27 video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and  
28

1 (6) other features of the platform which are currently unknown and hidden from users and  
2 governments.

3 136. DEFENDANTS knew or should have known that engagement-based ranking and  
4 intermittent variable rewards are highly addictive, promote harmful social comparison, encourage  
5 bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a  
6 manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased  
7 beauty standards upon users and cause harmful social comparison based on a misleading curation of  
8 peers' appearances, especially among teenage female users.

9 137. DEFENDANTS knew or should have known that the collaboration of these features  
10 multiplies the platforms' power to inflict harm by heightening the platform's addictive nature,  
11 increasing exposure to content that triggers negative social comparison, exposing users to innately  
12 harmful content, increasing time of exposure to harm, further encouraging bullying and promoting  
13 conflict, and multiplying harm in other ways.

14 138. DEFENDANTS knew or should have known that the features combine to create a user  
15 interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the  
16 most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease  
17 consuming, especially for young users. Content that is promoted by the algorithm is often related to  
18 beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison,  
19 especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or  
20 emotionally charged content causing harm to users.

21 139. DEFENDANTS knew or should have known that the combined result of these features  
22 is to present to users a false reality—it presents to users a world which is constantly controversial and  
23 negative; where most other people are exceedingly more attractive than the user; where most other  
24 people are exceedingly more successful and/or competent than the user; and which will facilitate and  
25 encourage harmful behaviors such as self-harm and eating disorders.

26 140. DEFENDANTS knew or should have known that these features take advantage of  
27 biological systems, human behavior, and psychology, to addict and condition users to engage in  
28

1 repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of  
2 repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the  
3 platform to automatically tune itself to each individual user to become as addictive and difficult to  
4 stop engaging with as possible.

5 141. DEFENDANTS knew or should have known that Facebook and Instagram could cause  
6 serious risk of harm, particularly to young persons and minors.

7 142. DEFENDANTS were negligent, reckless and careless and failed to take the care and  
8 duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

9 143. The negligence and extreme carelessness of DEFENDANTS includes, but is not  
10 limited to, the following:

- 11 a. Failure to perform adequate testing of the Facebook and Instagram prior to  
12 marketing to ensure safety, including long-term testing of the product, and testing  
13 for physical and mental health injuries;
- 14 b. Failure to warn consumers that Facebook and Instagram had not been adequately  
15 tested or researched prior to marketing to ensure safety;
- 16 c. Failure to take reasonable care in the design of Facebook and Instagram;
- 17 d. Failure to use reasonable care in the production/development of Facebook and  
18 Instagram;
- 19 e. Failure to use reasonable care in the operation of Facebook and Instagram;
- 20 f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- 21 g. Failure to use reasonable care in advertising, promoting, and marketing Facebook  
22 and Instagram;
- 23 h. Failure to use reasonable care in the dissemination of Facebook and Instagram  
24 without adequate warnings;
- 25 i. Use of a design that includes features that cause mental and physical harm,  
26 including, but not limited to: (1) engagement-based ranking (sorting content on a  
27 user’s feed based on engagement or “meaningful social interactions” rather than  
28 chronology); (2) intermittent variable rewards (a system of “likes,” comments,  
strategically-timed notifications, promoting the content of new users and users who  
have not posted in a while, among other features); (3) face tracking and  
augmentation (*i.e.*, photo and video filters designed to make users appear more  
attractive); (4) endless scrollable content (especially auto-playing video content  
such as the Instagram “Reels” content feed); (5) the interaction of these features;

1 and (6) other features of the platform which are currently unknown and hidden from  
2 users and governments;

3 j. Use of a design, engagement-based ranking and intermittent variable rewards that  
4 DEFENDANTS knew or should have known that are highly addictive, promote  
5 harmful social comparison, encourage bullying and conflict, can trap users in a  
6 cycle of viewing content that is innately harmful or in a manner that is harmful, and  
7 present a false reality. Image and video filters inflict unrealistic and biased beauty  
8 standards upon users and cause harmful social comparison based on a misleading  
9 curation of peers' appearances, especially among teenage female users;

10 k. Use of design features that DEFENDANTS knew or should have known would  
11 interact to multiply the platforms' power to inflict harm by heightening the  
12 platform's addictive nature, increasing exposure to content that triggers negative  
13 social comparison, exposing users to innately harmful content, increasing time of  
14 exposure to harm, further encouraging bullying and promoting conflict, and  
15 multiplying harm in other ways;

16 l. Use of design features that DEFENDANTS knew or should have known would  
17 combine to create a user interface of endless, auto-playing, image and video  
18 content, that is algorithmically sorted to place the most attention-grabbing content  
19 at the top and/or in a distilled feed that is very difficult to cease consuming,  
20 especially for young users. Content that is promoted by the algorithm is often  
21 related to beauty, success/wealth flaunting, or lifestyles, which causes negative  
22 physical or social comparison, especially among teens. Meta's algorithms also  
23 promote controversial, disturbing, negative, and/or emotionally charged content  
24 causing harm to users;

25 m. Use of design features that DEFENDANTS knew or should have known would  
26 result in presenting to users a false reality—it presents to users a world which is  
27 constantly controversial and negative; most other people are exceedingly more  
28 attractive than the user, and most other people are more successful and/or  
competent than the user;

n. Failure to inspect Facebook and Instagram for them to operate properly and avoid  
addiction, overuse, or mental health harms;

o. Failure to reasonably and properly test and properly analyze the testing of Facebook  
and Instagram under reasonably foreseeable circumstances;

p. Failure to warn consumers about the dangers associated with use of Facebook and  
Instagram, in that it was unsafe, causes social media addiction, depression, body  
dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia,  
eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by  
eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches,  
migraines, loss of vision, eye strain, among other harmful effects;

148. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes social media compulsion, attempted suicide, multiple periods of suicidal ideation, an eating disorder, depression, and a reduced inclination or inability to sleep, which may cause or contribute to additional disease.

1           149. DEFENDANTS' negligence and/or gross negligence were a substantial factor in  
2 causing and or contributing to Plaintiff's harms.

3           150. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
4 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
5 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
6 suit, attorneys' fees, and all such other relief as the Court deems proper.

7  
8                                   **FIFTH CAUSE OF ACTION**  
                                  **NEGLIGENT MISREPRESENTATION**

9           151. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
10 set forth fully at length herein.

11           152. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
12 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
13 State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts,  
14 statutes, and laws of the State of Virginia.

15           153. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
16 inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,  
17 and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid  
18 causing harm to those that used it, such as Plaintiff.

19           154. DEFENDANTS were negligent, reckless and careless and owed a duty to Plaintiff to  
20 make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS  
21 breached their duty, thereby causing Plaintiff to suffer harm.

22           155. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social  
23 media, and promotions, among other misrepresentations described herein—that:

- 24                   a. Facebook and Instagram were safe and were not harmful;  
25                   b. Long-term, frequent, prolonged use was harmless;  
26                   c. Facebook and Instagram increased social connectivity, rather than causing feelings  
27 of isolation; and  
28

- 1                   d.    An inaccurate and misleading portrayal of the platforms mental and physical health  
2                   impact;

3                   156.    DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any  
4                   media, that, according to its own research:

- 5                   a.    At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;  
6                   b.    Sixty-six percent of teen girls and forty-six percent of teen boys have experienced  
7                   negative social comparisons on Instagram;  
8                   c.    Facebook makes body-image issues worse for one-third of girls;  
9                   d.    Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes  
10                  thoughts of suicide and self-injury worse;  
11                  e.    Seventeen percent of teen-girl Instagram users say the platform makes eating issues  
12                  worse; and  
13                  f.    Instagram users are twice as likely to develop an eating disorder as those who don't  
14                  use social media.

15                  157.    Meta also omitted to inform users that, as it knew or should have known:

- 16                  a.    Engagement-based ranking and intermittent variable rewards are  
17                        i.    highly addictive,  
18                        ii.   promote harmful social comparison,  
19                        iii.   promote negative, controversial, and/or emotionally activating content,  
20                        iv.   promote negative, harmful, and/or dangerous interest groups and/or content  
21                        creators,  
22                        v.    encourage bullying and conflict,  
23                        vi.   can trap users in a cycle of viewing content that is innately harmful or in a  
24                        manner that is harmful, such as content related to eating disorders,  
25                        depression, or self-harm, and  
26                        vii.   present a false reality (regarding one's comparative status to their peers,  
27                        and/or the general state of world or political affairs);  
28                  b.    Face tracking and augmentation (image and video filters):

158. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.
159. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.
160. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.
161. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.
162. DEFENDANTS intended for Plaintiff to rely on these representations.

165. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

167. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes social media compulsion, attempted suicide, multiple periods of suicidal ideation, an eating disorder, depression, and a reduced inclination or ability to sleep, among other harms.

168. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

169. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

170. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Virginia.

1 171. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
 2 inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,  
 3 and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid  
 4 causing harm to those that used it, such as Plaintiff.

5 172. DEFENDANTS' marketing, promotions and advertisements contained deceptive  
 6 and/or misleading statements, implications, images, and portrayals that the platforms were safe,  
 7 improved social connectivity, and improved the mental and physical health of its users. For example,  
 8 Meta's investor relations page states that "Facebook's mission is to give people the power to build  
 9 community and bring the world closer together. People use Facebook to stay connected with friends  
 10 and family, to discover what's going on in the world, and to share and express what matters to them."<sup>10</sup>  
 11 In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which  
 12 Meta has long known.

13 173. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the  
 14 platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia,  
 15 anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia  
 16 nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty  
 17 sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

18 174. The omissions were misleading and deceptive standing alone and were particularly  
 19 deceptive in light of Meta's marketing, promotions and advertising of Facebook and Instagram as  
 20 positive for users mental and physical health.

21 175. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its  
 22 website, the platforms themselves, other social media, and promotions—that:

- 23 a. Facebook and Instagram were safe and were not harmful;  
 24  
 25  
 26

27 <sup>10</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them>.  
 28

176. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any that, according to its own research:

177. Meta also omitted/failed to inform users that, as it knew or should have known:

- 43

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- n. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- o. The platforms cause the mental and physical health harms as listed above;
- p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

178. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

179. The above representations were communicated to Plaintiff.

180. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

181. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive

reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

182. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

183. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

184. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

185. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

186. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

187. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

188. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Virginia.

189. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

190. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

191. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

192. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

193. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

1           194. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram  
2 can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm,  
3 thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide,  
4 death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines,  
5 loss of vision, eye strain, among other harms.

6           195. DEFENDANTS fraudulently and deceptively concealed they had not adequately  
7 researched or tested the platforms and its features to assess its safety before offering it on the market  
8 and promoting it to young people and adults.

9           196. DEFENDANTS fraudulently and deceptively concealed that the platforms were  
10 powerfully addictive.

11           197. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed  
12 to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and  
13 features in ways that could and would impact their addictiveness and mental health impact, and  
14 DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the  
15 innerworkings of its platforms and their mental health impacts.

16           198. DEFENDANTS concealed from Plaintiff that, according to its own research:

- 17           a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;  
18           b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced  
19           negative social comparisons on Instagram;  
20           c. Facebook makes body-image issues worse for one-third of girls;  
21           d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes  
22           thoughts of suicide and self-injury worse;  
23           e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues  
24           worse; and  
25           f. Instagram users are twice as likely to develop an eating disorder as those who don't  
26           use social media.

27           199. DEFENDANTS also concealed from Plaintiff that:

- 28           a. Engagement-based ranking and intermittent variable rewards are:

- i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

200. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

201. Plaintiff did not know of the facts that DEFENDANTS concealed.

1           202. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

2           203. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In  
3 concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also  
4 gained financially from this concealment, and because of their breach.

5           204. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through  
6 advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material  
7 information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about  
8 Facebook and Instagram.

9           205. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had  
10 Plaintiff been adequately informed of the material facts concealed from her regarding the safety of  
11 the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for  
12 or used Facebook and Instagram.

13           206. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms  
14 as described herein, including: social media compulsion, attempted suicide, multiple periods of  
15 suicidal ideation, an eating disorder, depression, and a reduced inclination or ability to sleep, among  
16 other harmful effects, which may cause or contribute to additional disease.

17           207. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent  
18 conduct as described herein.

19           208. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
20 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
21 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
22 suit, attorneys' fees, and all such other relief as the Court deems proper.

23

24

**EIGHTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

25

26

209. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
set forth fully at length herein.

27

28

212. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

213. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

214. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

215. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

216. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;
- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;

217. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

219. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

220. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

222. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

51  
COMPLAINT  
Case No.

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

224. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;

230. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained any amounts necessary to return Plaintiff to the position she occupied prior to dealing with NDANTS. Due to the sprawling, decades-long concern about the impacts of technology and

1 the internet on mental and physical health, and litigation commonly following injuries afflicted using  
2 the internet, and other notice they have received because of lawsuits filed against them,  
3 DEFENDANTS are reasonably notified that Plaintiff would expect compensation from  
4 DEFENDANTS' unjust enrichment stemming from their wrongful actions.

5 231. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
6 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
7 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
8 suit, attorneys' fees, and all such other relief as the Court deems proper.

9  
10 **TENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
11 **PRACTICES/CONSUMER PROTECTION LAWS**

12 232. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
13 set forth fully at length herein.

14 233. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
15 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
16 State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts,  
17 statutes, and laws of the State of Virginia.

18 234. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
19 inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,  
20 and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid  
21 causing harm to those that used it, such as Plaintiff.

22 235. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive  
23 trade practices and/or unfair business practices under applicable state law.

24 236. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

25 237. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered  
26 injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

1           238. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff  
2 would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as  
3 alleged herein.

4           239. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws  
5 include, but are not limited to, the following:

- 6                   a. Representing that goods or services have approval, characteristics, uses, or benefits  
7                   that they do not have;
- 8                   b. Advertising goods or service with the intent not to sell them as advertised;
- 9                   c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- 10                  d. Engaging in fraudulent or deceptive conduct that causes actual confusion or  
11                  misunderstanding as to the approval of certain goods; and
- 12                  e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

13           240. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered  
14 through a pervasive pattern of false and misleading statements and omissions by targeting minors and  
15 portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting  
16 concerns about their mental and physical health impact, addictiveness, and safety.

17           241. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive  
18 acts or trade practices in the design, development, manufacture, promotion, and sale of their products.  
19 DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material  
20 omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices  
21 in violation of consumer protection statutes, including, but not limited to, the following:

- 22                   a. VA. CODE ANN. § 59.1-196 *et seq.* (Virginia Consumer Protection Act of 1977).

23           242. Under these and other consumer protection statutes, DEFENDANTS are the suppliers,  
24 distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers  
25 (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for  
26 fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of  
27  
28

1 DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in  
2 advance of this filing and failed to take any action to cure their actions or omissions.

3 243. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations  
4 and omissions in deciding to use Facebook and Instagram.

5 244. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as  
6 a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and  
7 are entitled to statutory and compensatory damages in an amount to be proven at trial.

8 245. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
9 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
10 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
11 suit, attorneys' fees, and all such other relief as the Court deems proper.

12  
13 **ELEVENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

14 246. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
15 set forth fully at length herein.

16 247. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
17 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
18 State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts,  
19 statutes, and laws of the State of Virginia.

20 248. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
21 inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,  
22 and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid  
23 causing harm to those that used it, such as Plaintiff.

24 249. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein  
25 will bring a cause of action for breach of express warranty under applicable State common law.

26 250. Upon information and belief, DEFENDANTS expressly warranted through public  
27 statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or  
28

browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

251. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

252. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

253. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

254. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

255. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

256. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

257. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

1           258. DEFENDANTS' breach of these express warranties were a substantial factor in  
2 causing Plaintiff's harms.

3           259. As a direct and proximate result of DEFENDANTS' breach of these warranties,  
4 Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

5           260. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
6 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
7 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
8 suit, attorneys' fees, and all such other relief as the Court deems proper.

9  
10                               **TWELFTH CAUSE OF ACTION**  
11                               **BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

12           261. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
13 set forth fully at length herein.

14           262. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
15 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
16 State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts,  
17 statutes, and laws of the State of Virginia.

18           263. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
19 inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,  
20 and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid  
21 causing harm to those that used it, such as Plaintiff.

22           264. DEFENDANTS at all times were merchants with respect to the Facebook and  
23 Instagram platforms provided to Plaintiff and were in the business of programming, developing,  
24 disseminating, and operating such products.

25           265. Each platform Meta provided comes with an implied warranty that it will be  
26 merchantable and fit for the ordinary purpose for which it would be used.  
27  
28

1           266. The ordinary intended purposes of the platforms—and the purpose for which they are  
2 marketed, promoted, and made available—is to serve as safe social media platforms and allow users  
3 to connect with friends, create new and palatable association with strangers, and groups online.

4           267. The platforms are not fit for that use—or any other use—because they pose significant  
5 risks of substantial mental and physical injury resulting from the use of the products. When used as  
6 intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate  
7 users’ mental health.

8           268. Due to these and other features, the platforms are not fit for their ordinary, intended  
9 use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied  
10 warranties.

11           269. DEFENDANTS have unlawfully breached the platforms implied warranty of  
12 merchantability because Facebook and Instagram were not in merchantable condition when made  
13 available, were defective when made available, and do not possess even the most basic degree of  
14 fitness for ordinary use.

15           270. Despite having received notice of these defects, DEFENDANTS continue to  
16 misrepresent the nature of its products and breach its implied warranties.

17           271. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its  
18 website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and  
19 Instagram (Apple/the “App Store”) to establish privity between the platforms.

20           272. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other  
21 entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the  
22 intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured  
23 with the express purpose and intent of being made accessible to consumers.

24           273. Plaintiff would not have used Facebook and Instagram, or would not have registered  
25 or used on the same terms, had she known the facts these Defendants failed to disclose.

26           274. DEFENDANTS’ breach of these warranties were a substantial factor in causing  
27 Plaintiff’s harms.

1           275. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of  
2 implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to  
3 deliver merchantable products in the form of addiction and other negative health consequences.

4           276. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
5 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
6 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
7 suit, attorneys' fees, and all such other relief as the Court deems proper.

8  
9                                   **THIRTEENTH CAUSE OF ACTION**  
                                  **FITNESS FOR A PARTICULAR PURPOSE**

10           277. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
11 set forth fully at length herein.

12           278. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
13 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
14 State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts,  
15 statutes, and laws of the State of Virginia.

16           279. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
17 inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,  
18 and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid  
19 causing harm to those that used it, such as Plaintiff.

20           280. DEFENDANTS violated state law for breach of implied warranties and Plaintiff  
21 herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose  
22 under applicable State common law.

23           281. Plaintiff intended to use Facebook and Instagram as safe social media platforms and  
24 to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

25           282. DEFENDANTS knew at that time of account registration, and/or had reason to know,  
26 the particular purpose for which the products were required by Plaintiff, as evidenced by  
27 DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its  
28

283. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

284. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

285. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

286. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

287. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

288. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

289. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

290. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

291. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

292. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

293. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Virginia.

294. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

295. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

296. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

297. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

298. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of

Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

299. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

300. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

301. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

302. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

303. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

304. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

1           305. DEFENDANTS acted with conscious and reckless disregard for the rights and  
2 interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great  
3 probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

4           306. Based on their strategic and intentional promotion, advertising and marketing history,  
5 DEFENDANTS reasonably should have foreseen that young people would try Facebook and  
6 Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young  
7 adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed,  
8 as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-  
9 holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and  
10 physical issues this would cause on the individuals who would get addicted, as well the stress this  
11 would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that  
12 young people would be particularly susceptible to experiencing severe emotional distress.

13           307. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and  
14 outrageous conduct as described herein. Such harm includes social media compulsion, attempted  
15 suicide, multiple periods of suicidal ideation, an eating disorder, depression, and a reduced inclination  
16 or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

17           308. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton,  
18 malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and  
19 a conscious and depraved indifference to the consequences of their conduct—including to the health,  
20 safety, and welfare of their consumers—and warrants an award of punitive damages.

21           309. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
22 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
23 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
24 suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

310. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

311. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Virginia.

312. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

313. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

314. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

315. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

316. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

317. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD,

1 difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful  
2 effects, as described herein, that were known and knowable in light of scientific and medical  
3 knowledge that was generally accepted in the scientific community at the time of development,  
4 dissemination, public release, and operation of the platforms.

5 318. DEFENDANTS knew or should have known that Facebook and Instagram needed to  
6 be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised,  
7 promoted, supplied, disseminated, and/or made available properly, without defects and with due care  
8 to avoid needlessly causing harm.

9 319. DEFENDANTS knew or should have known that Facebook and Instagram could cause  
10 serious risk of harm, including severe emotional distress, particularly to young persons and minors.

11 320. DEFENDANTS knew or should have known that many of the youth who were  
12 encouraged to use the platforms had preexisting mental health issues and/or eating disorders who  
13 were at enhanced risk of harm by utilizing the misleadingly described platforms, which  
14 misrepresented the mental health effects of the platforms and failed to warn of the products' features'  
15 impacts and risks.

16 321. DEFENDANTS were negligent, reckless, and careless and failed to take the care and  
17 duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

18 322. DEFENDANTS' acts and omissions were extreme and outrageous because they  
19 constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful  
20 company would do in the same situation to prevent foreseeable harm and severe emotional distress  
21 to Plaintiff.

22 323. DEFENDANTS acted with conscious and reckless disregard for the rights and  
23 interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability  
24 of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

25 324. Based on their strategic and intentional promotion, advertising and marketing history,  
26 DEFENDANTS reasonably should have foreseen that young people would try Facebook and  
27 Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young  
28

1 adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed,  
2 as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-  
3 holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and  
4 physical issues this would cause on the individuals who would get addicted, as well the stress this  
5 would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that  
6 young people would be particularly susceptible to experiencing severe emotional distress.

7 325. Plaintiff was injured as a direct and proximate result of the negligent, reckless,  
8 extreme, and outrageous conduct as described herein. Such harm includes social media compulsion,  
9 attempted suicide, multiple periods of suicidal ideation, an eating disorder, depression, and a reduced  
10 inclination or ability to sleep, among other harmful effects, which may cause or contribute to  
11 additional disease.

12 326. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
13 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
14 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
15 suit, attorneys' fees, and all such other relief as the Court deems proper.

16  
17 **SIXTEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

18 327. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
19 set forth fully at length herein.

20 328. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
21 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
22 State, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts,  
23 statutes, and laws of the State of Virginia.

24 329. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
25 inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,  
26 and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid  
27 causing harm to those that used it, such as Plaintiff.

1           330. DEFENDANTS knew, or should have known through the exercise of reasonable care,  
2 the risks to consumers posed by the platforms and their features.

3           331. DEFENDANTS knew, or should have known through the exercise of reasonable care,  
4 that minors and young people would be attracted to these products.

5           332. DEFENDANTS knew or, by the exercise of reasonable care, should have known use  
6 of Facebook and Instagram was harmful and had the potential to cause social media addiction,  
7 depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia,  
8 eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of  
9 focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among  
10 other harmful effects, which may cause or contribute to additional disease.

11           333. Defendants owed a duty to the users of the Facebook and Instagram, including  
12 Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design,  
13 research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver,  
14 broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise,  
15 and/or make available Facebook and Instagram.

16           334. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the  
17 unsafe and/or defective platforms across the United States (including in Plaintiff's state).

18           335. As discussed, Defendants knew or reasonably should have known that the platforms  
19 were dangerous and not safe for use (without added protective measures and/or removal of harm  
20 causing features, if at all).

21           336. Defendants knew or, in the exercise of reasonable and ordinary care, should have  
22 known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the  
23 platforms for the purpose and in the manner for which the platforms were intended to be used and for  
24 purposes reasonably foreseeable to Defendants.

25           337. However, at all times, Defendants negligently breached said duties and unreasonably  
26 and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or  
27 warning.

1           338. Defendants have also not made any reasonable effort to remove and/or retrofit the  
2 serious safety risk posed by the platforms to consumers.

3           339. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of  
4 the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act  
5 as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances  
6 and failed to exercise reasonable care.

7           340. Plaintiff was injured as a direct and proximate result of the negligent conduct as  
8 described herein. Such harm includes social media compulsion, attempted suicide, multiple periods  
9 of suicidal ideation, an eating disorder, depression, and a reduced inclination or ability to sleep, among  
10 other harmful effects, which may cause or contribute to additional disease.

11           341. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and  
12 punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to  
13 allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of  
14 suit, attorneys' fees, and all such other relief as the Court deems proper.

15  
16                                   **SEVENTEENTH CAUSE OF ACTION**  
  **MEDICAL MONITORING**

17           342. Plaintiff incorporates by reference each preceding and succeeding paragraph as though  
18 set forth fully at length herein.

19           343. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant  
20 to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident  
21 state, Virginia. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes,  
22 and laws of the State of Virginia.

23           344. At all relevant times, DEFENDANTS designed, developed, managed, operated,  
24 inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,  
25 and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid  
26 causing harm to those that used it, such as Plaintiff.

345. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

346. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

347. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);

- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

348. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

349. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

350. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also

1 promote controversial, disturbing, negative, and/or emotionally charged content causing harm to  
2 users.

3 351. The combined result of these features is to present to users a false reality—it presents  
4 to users a world which is constantly controversial and negative; where most other people are  
5 exceedingly more attractive than the user; where most other people are exceedingly more successful  
6 and/or competent than the user; and which will facilitate and encourage harmful behaviors such as  
7 self-harm and eating disorders.

8 352. These features take advantage of biological systems, human behavior, and psychology,  
9 to addict and condition users to engage in repetitive content-consuming actions such as scrolling,  
10 “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input  
11 and behavior are tracked to allow the platform to automatically tune itself to each individual user to  
12 become as addictive and difficult to stop engaging with as possible.

13 353. Potential health harms from these features include, among other types of harm, social  
14 media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-  
15 harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating  
16 disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye  
17 strain, among other harmful effects.

18 354. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has developed  
19 mental and physical health issues that will require life-long monitoring treatment.

20 355. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has a  
21 significantly increased risk of developing a serious latent disease and/or injury, suffering further  
22 injury at an unknown date in the future. Such injuries include the development and/or exacerbation  
23 of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm,  
24 thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide,  
25 death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines,  
26 loss of vision, eye strain, among other harmful effects.

1           356. Monitoring procedures exist that makes the early detection and prevention of the above  
2 technology-related and/or induced diseases and mental health issues possible. Many of the above  
3 physical and mental issues can lead to other physical and mental health injuries long-term that can be  
4 detected and prevented by existing medical and psychological testing and treatment.

5           357. For example, eating disorders can cause hormone/growth problems, heart problems,  
6 neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment,  
7 relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-  
8 prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly  
9 lead to other health issues.

10           358. These procedures are different from that normally recommended in the absence of the  
11 exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing,  
12 and physical examinations, and would be reasonably necessary according to contemporary scientific  
13 principles.

14           359. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression,  
15 sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to  
16 cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until  
17 much later in life. Existing medical research indicates that these issues can cause permanent digestive  
18 tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products  
19 cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent  
20 of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct,  
21 it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing  
22 beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of  
23 these platforms.

24           360. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages  
25 to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and  
26 prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such  
27 other relief as the Court deems proper.

1           361. Such other relief as the Court deems proper.

2           **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

3           362. Through the exercise of reasonable diligence, Plaintiff did not and could not have  
4 discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the  
5 time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

6           363. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused  
7 her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing  
8 of this action.

9           364. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any  
10 statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS  
11 actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and  
12 that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative  
13 misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

14           365. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and  
15 could not have reasonably known or learned through reasonable diligence that she had been exposed  
16 to the defects and risks alleged herein and that those defects and risks were the direct and proximate  
17 result of DEFENDANTS' acts and omissions.

18           **VIII. DEMAND FOR A JURY TRIAL**

19           Plaintiff hereby demands a trial by jury.

20           **IX. PRAYER FOR RELIEF**

21           Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but  
22 not limited to:

- 23           1. Entering judgment for Plaintiff and against DEFENDANTS;  
24           2. Entering an Order that Defendants are jointly and severally liable;  
25           3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the  
26 platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment  
27  
28

of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;

4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: June 30, 2022

Respectfully Submitted,

/s/ Dena C. Sharp

UNITED STATES DISTRICT COURT  
NORTHERN DISTRICT OF CALIFORNIA  
SAN FRANCISCO DIVISION

ALEXIS, KATHLEEN, and JEFFREY  
SPENCE

Plaintiff(s),

v.

META PLATFORMS, INC., formerly  
known as FACEBOOK, INC.;

Defendant.

Case No. \_\_\_\_\_

COMPLAINT FOR PERSONAL  
INJURIES

JURY DEMAND

“In these digital public spaces, which are privately owned and tend to be run for profit, there can be tension between what’s best for the technology company and what’s best for the individual user or for society. Business models are often built around maximizing user engagement as opposed to safeguarding users’ health and ensuring that users engage with one another in safe and healthy ways. . . .”

*Protecting Youth Mental Health*, The U.S. Surgeon General’s Advisory (December 7, 2021)

“Tweens are herd animals . . .”

*Tweens and Social Media*, Meta Platforms Internal Report (October 9, 2017)

1 Plaintiffs Alexis Spence and her parents, Kathleen and Jeffery Spence, bring this action for  
2 personal injury and loss of consortium against Meta Platforms, Inc., formerly known as Facebook,  
3 Inc. (“Facebook”), doing business as Instagram (“Instagram”) (collectively, “Meta”), and allege  
4 as follows:

## 5 I. INTRODUCTION

### 6 A. Plaintiffs’ Claims

7 1. This product liability action seeks to hold Defendant Meta’s Instagram product  
8 responsible for causing and contributing to burgeoning mental health crisis perpetrated upon the  
9 children and teenagers of the United States by Meta and, specifically for the injuries it caused  
10 Alexis Spence beginning in 2013, when Alexis was only eleven years old. Those injuries,  
11 proximately caused by Meta’s unreasonably dangerous Instagram social media product, include  
12 but are not limited to, addiction, anxiety, depression, self-harm, eating disorders, and, ultimately,  
13 suicidal ideation.

14 2. Meta’s Instagram social media product likewise caused foreseeable harms to  
15 Plaintiffs Kathleen and Jeffrey Spence, Alexis’ parents. Kathleen and Jeffrey Spence took  
16 affirmative steps to protect their daughter, did not consent to Meta distributing or otherwise  
17 providing Alexis with access to its Instagram product, and were emotionally and financially  
18 harmed by Meta’s addictive design and continued and harmful distribution and/or provision of  
19 multiple Instagram accounts to their minor child.

20 3. Plaintiffs’ harms were all caused by Alexis’ exposure to and use of Meta’s  
21 unreasonably dangerous and defective social media product, Instagram. Alexis was 11 years old  
22 when she opened her first Instagram account, without her parents’ knowledge or consent. Meta  
23 knew that she was under the age of 13. Meta also designed its product to encourage such illegal

1 and unauthorized use, and in a manner that encouraged Alexis to open multiple accounts.

2 4. In Meta’s own words, it created a “perfect storm” of addiction, social comparison,  
3 and exposure to incredibly harmful content and product features, then operated its algorithms to  
4 push and promote harmful content via Alexis’ Feed, Explore, Stories, and Reels features. Meta  
5 programmed and operated its product to prioritize engagement over user safety, and Alexis  
6 suffered several emotional, physical, and financial harms as a result, as did her parents—all of  
7 which are a symptom of the current health crisis among American youth caused by certain harmful  
8 social media products, specifically in this case, Instagram.

9 **B. Meta’s Internal Documents Targeting Children**

10 5. In late 2021, a Facebook whistleblower disclosed thousands of internal Meta  
11 documents to the United States Securities Exchange Commission (the “SEC”) and Congress. This  
12 Complaint quotes from, cites to, and includes photographs of just some of those documents,  
13 referred to herein as “FBP” or the “Facebook Papers.” The Facebook Papers prove known  
14 dangerous designs and design defects as well as operational decisions and calculations, and a  
15 causal relationship between use of these social media products in their current form resulting in  
16 addiction, anxiety, depression, eating disorders, and what Meta refers to as “SSI” (Suicide and Self  
17 Injury) harms to Facebook and Instagram users. The Facebook Papers establish that Meta has  
18 actual knowledge that children under the age of 13 are using its social media products; that its  
19 social media products are highly addictive and harmful to a significant population of all users, but  
20 especially teens, children, and certain protected classes (women, people of color, and low-SES);  
21 and that its algorithms and algorithm-driven product features, such as Feed, Explore, Reels, and  
22 Stories, as well as product design features that serve no functional purpose, such as “Likes,” are  
23 causing harm to its users. The Facebook Papers show that Meta senior leadership has actual

specific knowledge of these harms, as well as the causal connection between the current mental health crisis among America’s youth and its social media products. Conscientious Meta employees repeatedly informed senior leadership of product hazards and ongoing harms among product users but were ignored, terminated, and/or strongly encouraged to find employment elsewhere. Meta and its primary competitors in the social media space are making calculated cost-benefit business decisions and are consistently prioritizing their already astronomical profits over human life. The information contained in these documents is important to the safety of children and teens on a global scale, and the world has a right to know.

6. These documents do not include privileged material. The Facebook Whistleblower represented to Congress, and we represent to this Court, that there are “No Privileged Materials Included ... we have deliberately \*not\* included any privileged materials ... [and these documents] do not contain any materials with markings such as “Attorney-Client Privileged,” or any materials we have any reason to suspect could be privileged.”<sup>1</sup>

### C. The Social Media Epidemic Among Children

7. On December 7, 2021, the United States Surgeon General issued an advisory cataloging a dramatic increase in teen mental health crises including suicides, attempted suicides, eating disorders, anxiety, depression, self-harm, and inpatient admissions. Between 2007 and 2018, for example, suicide rates among youth ages 12 to 16 in the U.S. increased a staggering 146 percent. Several cities across the United States have been experiencing teen suicide rates in the range of 1 every year or other year, which is an absolute crisis for our country—the death by suicide of a child is something that should be an exception and not a rule. The incidence of serious depression and dissatisfaction with life in this age group has likewise increased dramatically, and

<sup>1</sup> See Letter to SEC Office of the Whistleblower, dated August 11, 2021 (emphasis in original).

there is no question that these harms relate in no small part to companies like Meta.

8. The most significant and far-reaching change to the lives of young people in the last ten years has been the widespread adoption of social media platforms and, prominently, for purposes of this lawsuit, the Instagram product which launched in 2010 and was acquired by Facebook (now Meta) in 2012, and which is designed and distributed by Meta.

9. By 2014, 80 percent of high-school students said they used social media daily, and 24 percent said that they were online “almost constantly.” By 2016, Meta’s internal research concluded that “[t]he majority of 10-12 year olds [had] at least one social media account,”

FBP 42/03, “Tweens and Social Media” (October 2017), at p. 18.

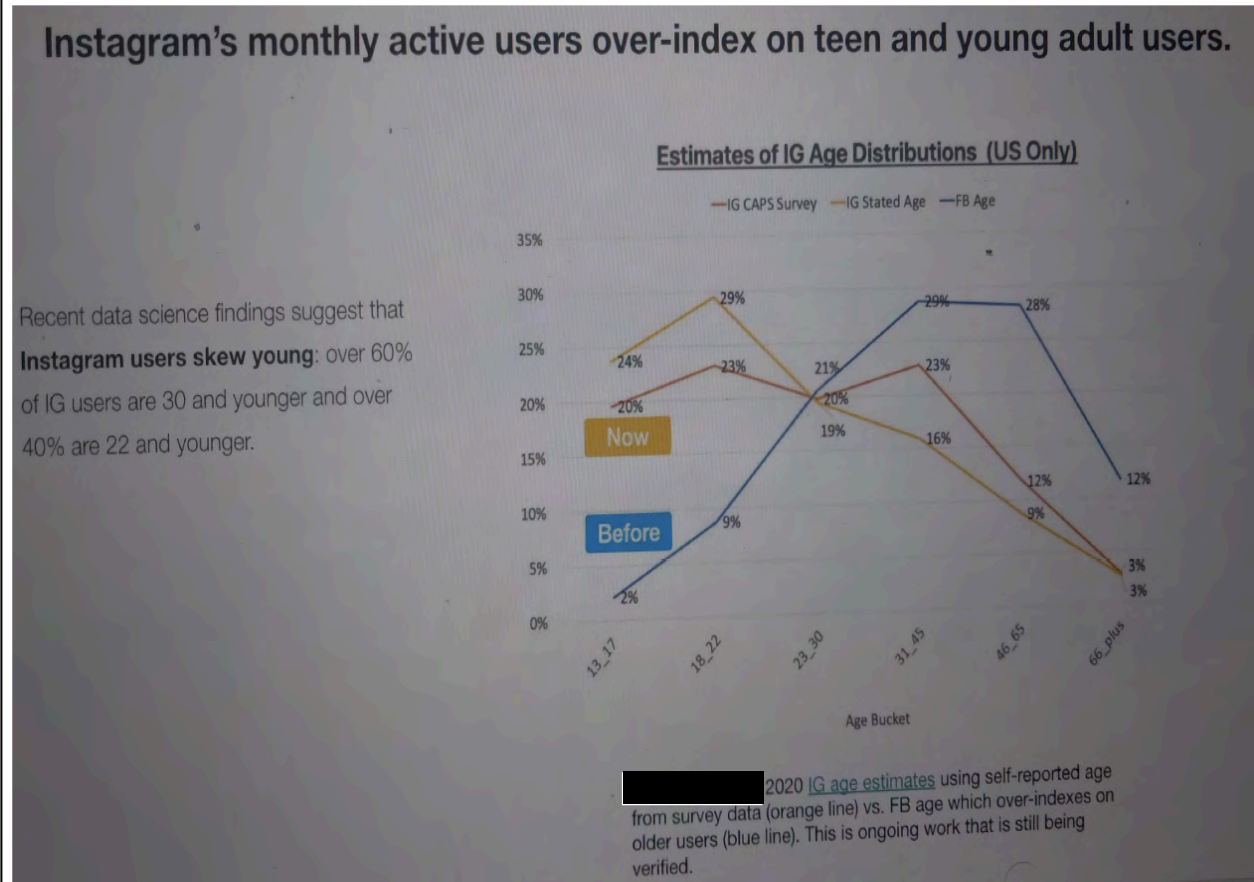

10. By 2018, an estimated 63% of all children in the United States aged 13 to 14 and 78% of all children in the United States aged 15 to 17 used Instagram specifically. Current estimates put the total number of all US teens using Instagram at 76%.

11. Putting this into context, Instagram has an estimated 1.28 billion monthly active users (or “MAU”) worldwide, with 24% of MAU self-reporting between 13 and 17 years old. This equates to roughly 307 million at-risk teenage Instagram users worldwide, and more than 18.62

million at-risk teenage Instagram users in the U.S. alone.<sup>2</sup>

12. Teens make up a significant percentage of all Instagram users,

FBP 42/15, “The Power of Identities: Why Teens and Young Adults Choose Instagram - A UX, Market Research and Data Perspective,” at p. 5.

#### D. Disparities Between Meta’s Public Statements and Internal Research on Harm to Children

13. Peer reviewed studies and available medical science have also identified a particular type of social media and electronic device use associated with major mental health injuries, including depression, self-harm, eating disorders, suicide attempts and ideation, dissatisfaction with life, depression, and sleep deprivation. Large observational studies and

<sup>2</sup> Meta estimates 24.5 million teen internet users in the U.S. (FBP 42/15, at p. 29), and an estimated 76% of all U.S. teens are on Instagram.

1 experimental results also point to heavy use of certain social media products as the cause of  
2 increased depression, suicidal ideation, and sleep deprivation among teenagers, particularly  
3 teenage girls. Again, Meta has spent years publicly denying these findings—while internally  
4 confirming them.

5         14. Specifically, Meta leadership has vehemently denied that its products are harmful  
6 or addictive. Meta has gone to great lengths to assure the world that its social media products are  
7 safe. Even its Terms of Use (effective January 4, 2022) represent that Meta is “Fostering a positive,  
8 inclusive, and safe environment,” and that Meta uses its “teams and systems ... to combat abuse  
9 and violations of our Terms and policies, as well as harmful and deceptive behavior. We use all  
10 the information we have—including our information—to try to keep our platform secure.”  
11 (Effective January 4, 2022). However, Meta’s own internal research and “experiments” show the  
12 opposite. The Facebook Papers include years’ worth of studies and reports, often referred to by  
13 Meta as “experiments,” discussing the fact that Meta’s social media products are addictive and  
14 harmful, and that use of those products can and does lead to serious mental health issues in a  
15 significant number of users, including things like anxiety, depression, eating disorders, and what  
16 Meta refers to as Suicide and Self Injury (or, SSI). The following are just a few examples.

17         15. Internal Meta research written in 2019 discusses why increasing user  
18 engagement—Meta’s number one priority—does not correlate to increasing user value. This  
19 research refers back to other studies from years prior, confirming that higher engagement (*i.e.* more  
20 sessions and/or time spent over a certain threshold) causes “higher negative effect” for users, and  
21 other hallmarks of addiction (referred to internally at Meta as “problematic use”). Meta research  
22 found that users who deactivated their Meta accounts experienced increased happiness and well-  
23 being; however, they also then engaged in “persistently lower use,” which is the precise result

Meta desperately needed to avoid.

[5] [REDACTED] (2018) "User Perception of Time-Spent on Instagram"

- <https://fb.workplace.com/groups/432156973909421/permalink/482477452210706/>
- "survey in May 2018 with mid to high time spent users on Instagram,"
- "More than a third of the survey respondents feel they have spent more time than they would have liked on Instagram. About one in five respondents think they have a problem controlling their time."
- 42% of the survey respondents have taken a break from Instagram. The top reason for taking a break is "I had something at work or school that I needed to focus on." More high TS users report that the break has made them feel worse than before than low TS users.
- People who spend longer time think their time spent is more meaningful than those who spend shorter time. Those who spend longer than 3 hrs/day have lower positive affect, lower life satisfaction, and higher negative affect than people who spend shorter time on Instagram.

[6] [REDACTED] et al. "The Welfare Effects of Social Media"

- <https://web.stanford.edu/~gentzkow/research/facebook.pdf>
- "Deactivation caused small but significant improvements in well-being, and in particular in self-reported happiness, life satisfaction, depression, and anxiety ... Our overall index of subjective well-being improved by 0.09 standard deviations. As a point of comparison, this is about 25-40 percent of the effect of psychological interventions including self-help therapy, group training, and individual therapy, as reported in a meta-analysis by Bolier et al. (2013)."
- (after deactivation, persistently lower use)

FBP 08/25, "When User-Engagement  $\neq$  User-Value" (December 10, 2020), at p. 10-11.

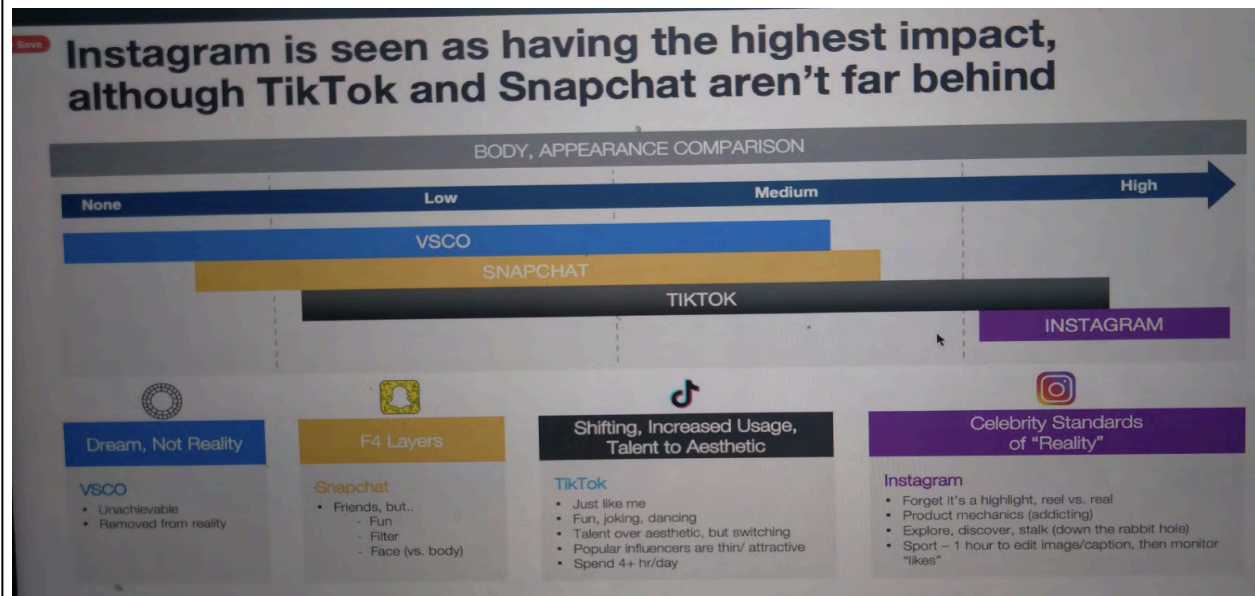

16. In late 2019 or early 2020 Meta also conducted an "exploratory study" in the United States, aimed at examining "Teen Girls Body Image and Social Comparison on Instagram." The

1 resulting PowerPoint was published internally at Meta in March of 2020, titled “Social  
 2 Comparison Exploratory Research,” and found that use of Instagram made certain social  
 3 comparison-based harms worse for a significant percentage of teen girls using Instagram. For  
 4 example, “32% of teen girls said that when they felt bad about their bodies, Instagram made them  
 5 feel worse.”

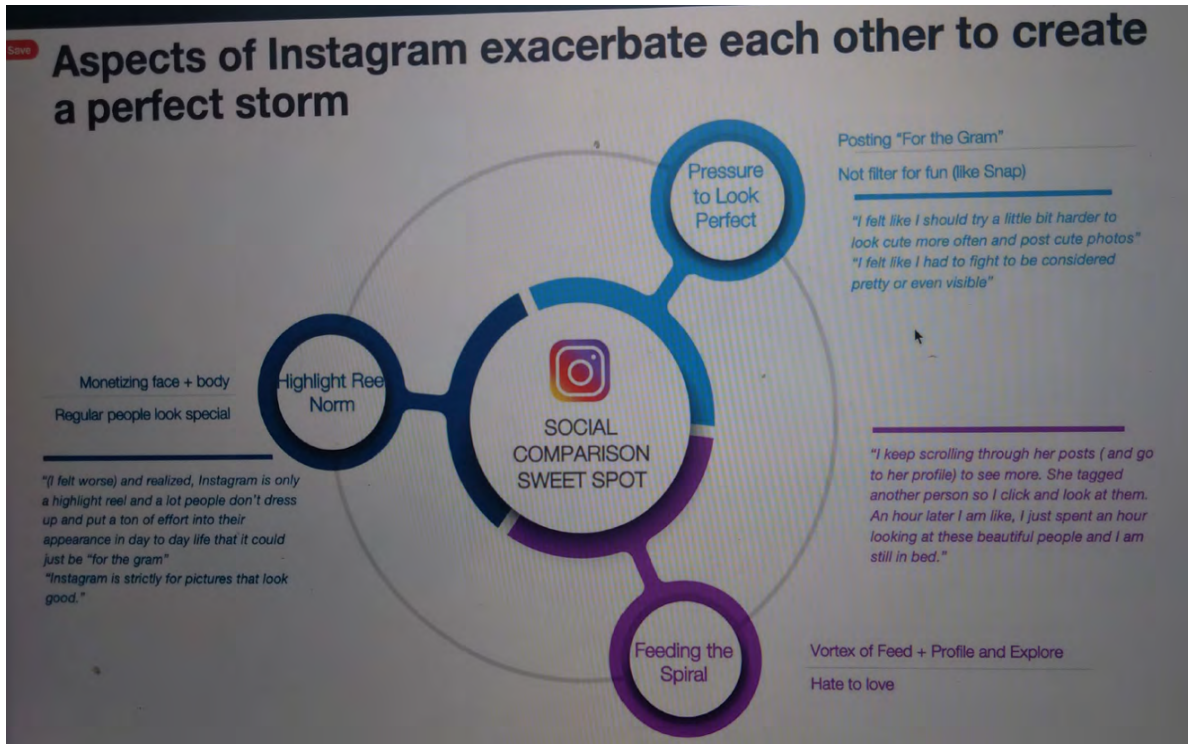

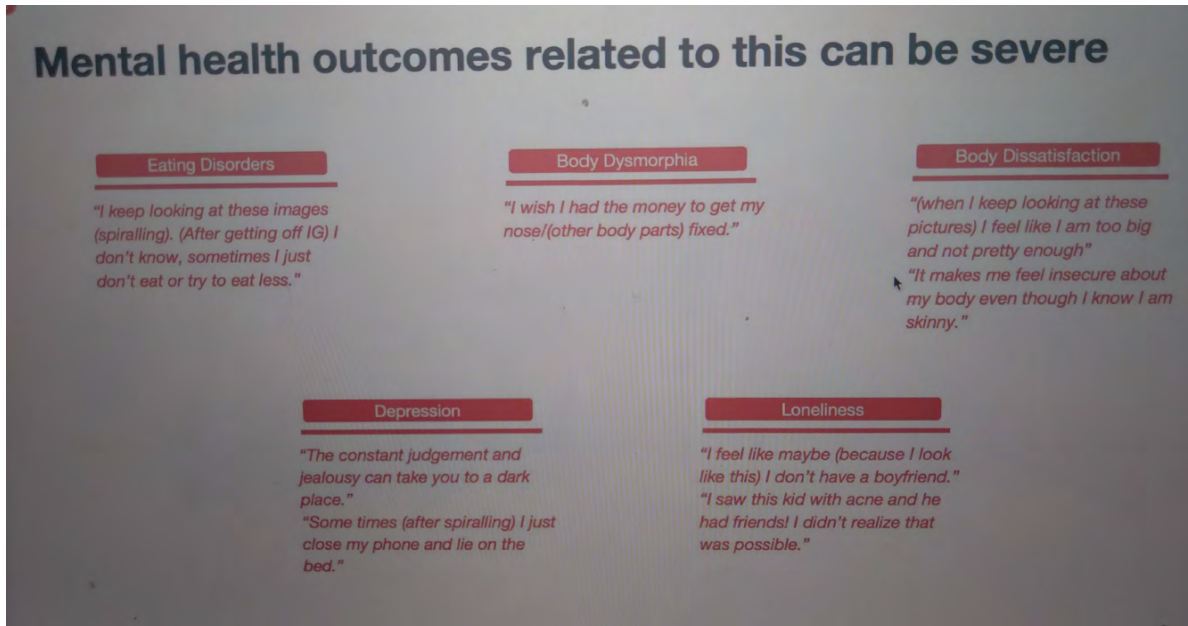

12 FBP 24/13, “Teen Girls Body Image and Social Comparison on Instagram – An Exploratory Study  
 13 in the US” (March 2020), at p. 8. Meta researchers reported that Instagram was viewed as having  
 14 the “highest impact” in terms of these harms as compared to its competitors,  
 15

FBP 24/13 at p. 37 (Instagram described as “Product mechanics (addicting).”

17. More to the point, Meta knows that “Aspects of Instagram exacerbate each other to create a perfect storm.” FBP 24/13 at p. 43. According to Meta, the “social comparison sweet spot” (*id.*)—a place of considerable harm to users, particularly teens and teen girls—lies at the center of Meta’s product model and product features,

FBP 24/13 at p. 43, 47. The user harms acknowledged in these slides relate, ultimately, to Meta product features like “Feed + Profile and Explore” (*id.*), filters, and teen-targeted marketing and accessibility. Meta knows exactly the harms that its products are causing to its teen users yet remains focused on maintaining and increasing user engagement which translates into greater profits for Meta. *See also* FBP 24/12, *Research Insights Document*, “How the topics people see are linked to appearance comparison on IG” (March 2021), *infra*.<sup>3</sup>

18. Meta also knows that its recommendations and other product features, like Feed and Explore, result in disproportionate harms to vulnerable users including children, teens, teen girls, and women. Yet Meta continues to reap astronomical profits at the expense of these users.

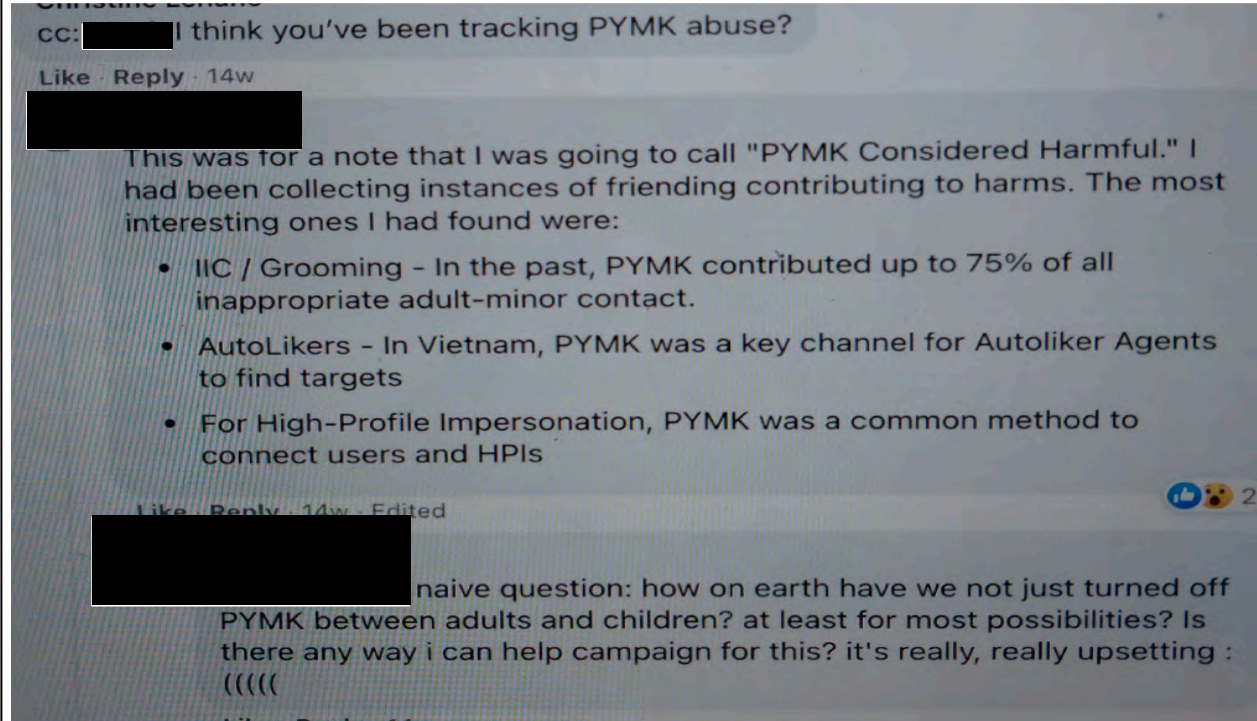

19. One example is the “friend” recommendation product feature, which is a feature Meta has in both its Facebook and Instagram social media products. Meta knows that this feature is harmful to children—*i.e.*, “IIC/Grooming—in the past, PYMK [People You May Know]

<sup>3</sup> Meta has known or had reason to know about these harms from the outset. *See* Sept. 30, 2021, Senate Hearing Transcript, at 1:07:47 (reference to study published in National Academy of Sciences “way back in 2014.”).

1 contributed up to 75% of all inappropriate adult-minor contact” —and could simply turn this  
 2 feature off but has opted to leave it in place instead. *See* FBP 36/38, “Growth, Friending + PYMK,  
 3 and downstream integrity problems,” at p. 4. In response, one Meta employee asked,

4 ...naive question: **how on earth have we not just turned off PYMK between**  
 5 **adults and children?** at least for most possibilities? is there any way I can help  
 6 campaign for this? it’s really, really upsetting : (((((

16 *Id.* (emphasis added). The question is a good one. The answer, of course, goes back to Meta’s  
 17 failure to make changes that might impact its competitive positioning and user engagement – even  
 18 when it meant exposing its most vulnerable users to sexual exploitation.

19 20. Meta’s own research has also been quite conclusive in determining that,

- 20 a. 13.5% of teen girls on Instagram say the platform makes thoughts of “Suicide  
 21 and Self Injury” worse.  
 22 b. 17% of teen girl Instagram users say the platform makes “Eating Issues” (e.g.  
 23 anorexia and bulimia) worse;

1 c. “We make body image issues worse for 1 in 3 teen girls.”

2 FBP 45/33, *Instagram Mental Health Summary Document* (PowerPoint titled “Mental Health  
3 Findings”), (November 2019), at p. 9; *see, also, e.g.*, FBP 24/15, *Instagram Insights*, “IG Social  
4 Comparison Research Findings” (November 2018), at p. 27 (“Teen girls and young women are  
5 particularly prone to negative social comparisons); *id.* at p. 33 (finding 8 times the harm to teen  
6 girls as compared to men 25 years and older, and 5 times for young women).

7 21. Meta has likewise identified algorithmic bias based on race and low SES. For  
8 example, an internal Q1 2021 Report (*see* FBP 38/04, “Equity User Insights – Q1 2021 Report”  
9 (April 2021), at p. 9-15), noted that users were reporting Facebook for “promoting or  
10 recommending racist groups.” In a similar equity analysis (*see* FBP 41/01, “H1 2021 Equity  
11 Analysis: Reels” (April 2021), at p. 6, 9, 11-22), Meta noted that “Reports of equity-related  
12 concerns have been relatively consistent over time and are reported by users across platforms with  
13 similar frequency.” *See, e.g.*, FBP 38/05, “Growth x Equity User Feedback – Findings &  
14 Recommendations” (March 2021), at p. 11 and 38/06, *Equity User Signal Task – Raw Data*, at p.  
15 5 (complaints that PMYK [People You May Know] suggestions are sometimes a result of racial  
16 profiling); FBP 33/15, *Comprehensive Study on disparate product impacts by race*, at p. 1 (“It’s  
17 virtually guaranteed that our major systems do show systemic biases based on the race of the  
18 affected user ...”). In 2019, Meta interviewed eighteen “vulnerable user participants ... to learn  
19 about how people experience integrity harms on Facebook over time.” *See* FBP 10/22, “Longitude  
20 Integrity Harm Project” (August 2019-January 2020). Although these interviews were limited in  
21 terms of participant numbers, they also confirmed the presence of algorithmic discrimination.  
22 “Black participants had a *much higher concentration of violent content ...* and sexual content that  
23 they did not want to see in their Feeds.” (emphasis added).

**Insight: Qualitatively, there appear to be different information ecosystems along axes of lower SES and higher SES, as well as race.**

- Group A participants experienced integrity harms on Facebook less often and perceived them to be less severe (eg inappropriate comment vs. child abuse video).
- Behaviorally they tended to only friend people they knew in real life and most knew how to report content and unfollow Pages - their Feeds were very curated.
- Group B participants included black participants, a recent immigrant to the US (from Ethiopia), and a couple low SES older white participants.
- Behaviorally they exhibited vulnerabilities related to low tech skill including accepting most friend requests (many FB friends they did not know), not knowing how to unfollow Pages or leave Groups, and not knowing what to do besides leaving the App or scrolling past if they see content they perceived as harmful.
- Black participants had a much higher concentration of violent content (borderline and ones that had been removed or covered) and sexual content that they did not want to see in their feeds.

**Black participants also had a lot more Facebook Live videos in their Feeds.**

- Participants were on Live for many hours at a time, documenting everyday life.
- One participant estimated that 50% of her News Feed was Facebook Live.
- Facebook Live is more difficult to review for Integrity harms (long video) and therefore can be riskier.

**Example of a Live video while driving**

FBP 10/22 at p. 28, 31, 37.

22. In February 2021, Meta ran another analysis, employing ML Equivalency to see

whether black users and white users would be shown the same content by Meta’s product if they were similar in chosen “controlling” dimensions. That is, where the controlling criteria was not skin color and was consistent across the tested users, one would expect—in a non-discriminatory system—to see the same outcome. That, of course, did not happen. Without controlled criteria, “the African Americans were more likely to be given a higher risk score, with the mean score being much higher (5.3 vs 3.6 for Caucasians).” But even with controlled criteria (“Once the African American group was weighted to become more comparable to the Caucasian group in terms of the dimensions matched”) there was still a difference—just a smaller one. FBP 39/16, “They Synthetic Parity Method of ML Equivalency” (February 2021), at p. 10-11.

As a sanity check, we ran a **logistic regression model**, where the dependent variable was whether prediction was high risk and the control variables were the same as used in the synthetic parity analysis. The coefficient for African Americans vs Caucasians as the reference group turned out to be 0.477, indicating that everything else being equal, the model was more likely to place African Americans into the high risk bucket. The conclusion directionally agreed with synthetic parity.

All in all, COMPAS seems to give higher risk scores to the African American group, where the raw difference in average scores was 1.7 and the adjusted difference was 0.6 after controlling for the dimensions specified above. In addition to statistical testing, we should also check whether the difference, if any, is practically significant. If the difference is above what is deemed acceptable, then follow-up analysis using tools like the Fairness Flow is recommended.

FBP 39/16, “They Synthetic Parity Method of ML Equivalency” (February 2021), at p. 12; *see also* FBP 09/20, “Comprehensive Study Disparate Product Outcomes by Race” (June 2020), at p. 4 (“**Algorithmic Fairness.** Are our machine learning and other algorithms systematically biased for or against content from different groups? ... Based on past experience, it’s reasonably likely that bias does exist, but it’s not clear which direction it might lean (it will almost certainly vary

per model))). In short, Meta knows that its platforms are particularly harmful to several protected classes yet continues to operate and cause that harm.

23. Meta documents discuss that “Constant comparison on Instagram is ‘the reason’ why there are higher levels of anxiety and depression in young people,”

### Teens blame Instagram for increases in the rates of anxiety and depression among teens

- This reaction was unprompted and consistent across all groups
- Constant comparison on Instagram is “the reason” why there are higher levels of anxiety and depression in young people
- Social comparison and perfectionism are nothing new, but young people are dealing with this on an unprecedented scale.
- The proliferation of new and different ways to compare themselves to others, combined with constant access to means that there is no way to escape social comparison on IG.
- For both boys and girls, this was called out as being the number one reason why IG is worse than other platforms for mental health. And, young people openly attribute their increased level of anxiety and depression to Instagram.

*“The reason why our generation is so messed up and has higher anxiety and depression than our parents is because we have to deal with social media. Everyone feels like they have to be perfect.”*  
- UK Female

FBP 23/01, “Teen Mental Health Deep Dive” (October 10, 2019) at p. 53. As illustrated in the Facebook Papers, this constant and harmful social comparison is the result of social media’s design and operation.

24. Meta documents report that 13.5% of teen girls on Instagram say that the platform makes thoughts of Suicide and Self Injury (SSI) worse; while 17% of teen girls on Instagram say that the platform makes “Eating Issues” (e.g. anorexia and bulimia) worse,

FBP 45/33, “Mental Health Findings,” at p. 9.

25. Meta knows that its product is contributing to teen depression, anxiety, even suicide and self-harm. Why doesn’t it change these harmful product features and stop utilizing algorithms in connection, at least, with teen accounts? Because Meta’s priority is growth and competition concerns, and it sees “acquiring and retaining” teens as essential to its survival. As made clear in the Facebook Papers, teenagers spend significantly more time on social media than adults (both total time and user sessions—which are usage patterns Meta links to addiction), represent Meta’s greatest (if not only) growth opportunity in the US, and can be used by Meta to do many “jobs” including, among other things, recruitment of older and younger family members and friends.

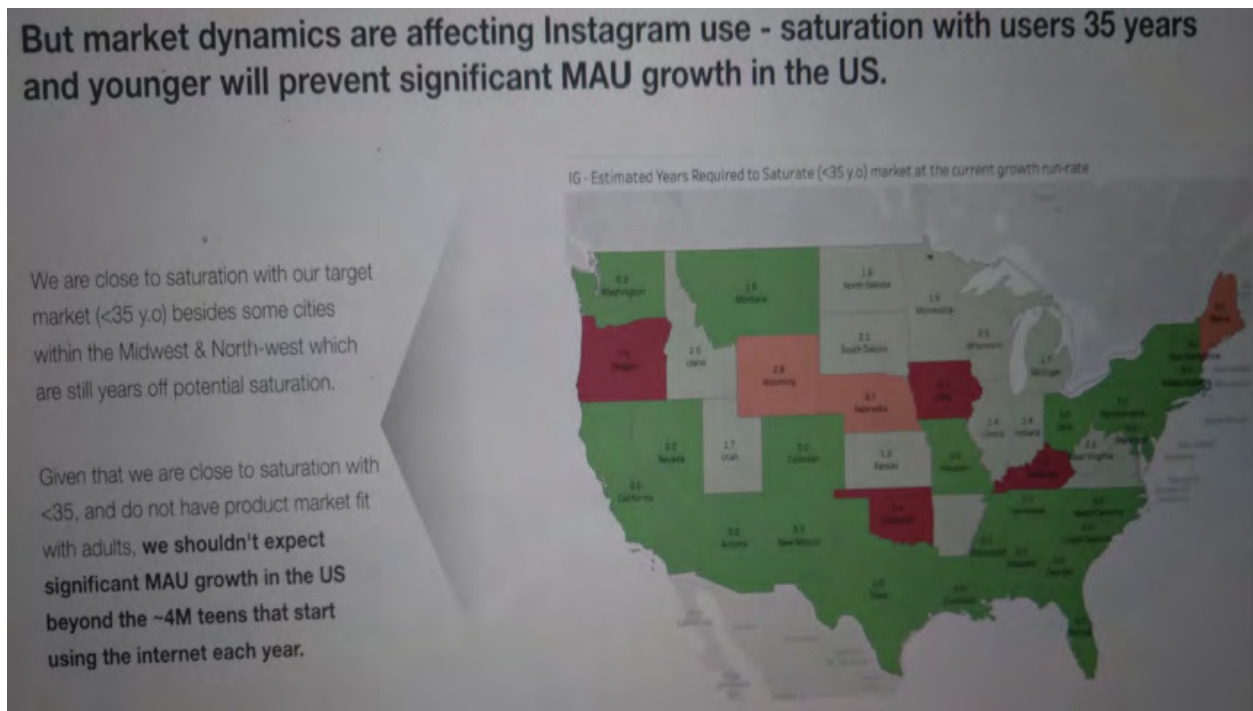

26. “Teens have 34% more sessions than adults” and spent far more time on average on Instagram in all global markets than their adult counterparts,

- iOS users have 31% more sessions than Android users
- Teens have 34% more sessions than adults
- US users have 16% more sessions than the avg country, mostly due to prevalence of iOS

FBP 16/09, “A Primer on Instagram Sessions” (April 2019), at p. 11-12.

27. Meta does not “expect significant MAU growth in the US beyond the ~4M teens that start using the internet each year.”

FBP 42/15, “The Power of Identities: Why Teens and Young Adults Choose Instagram - A UX, Market Research and Data Perspective,” at p. 30.

28. Other Meta studies have confirmed that teens are the best way to capture household adults and children. Pre-teens look to their older siblings in terms of which social media products to use and how to use them, and often obtain guidance from them to open their first account, while

1 parents and grandparents are influenced by teen household members and open accounts to  
2 participate in their child's life.

3 Insight #1: **Teens were often the reason other household members joined IG.**

- 4 • **Implication:** One member within a household has the power to influence acquisition  
5 and retention for others. Family-first acquisition strategies are proven effective (e.g.  
6 TikTok) and warrant exploration on IG.

7 Insight #2: **Teens strongly influenced preteens' understanding of what and how frequently  
8 to share on IG, even discouraging them from sharing due to permanence or content context.**

- 9 • **Implication:** If this holds at scale, **teens could be creating sharing barriers for upcoming  
10 generations** including that being spontaneous/authentic doesn't belong on IG and that IG  
11 is more for consuming than sharing. We need to understand IG myths circulating among  
12 **teens to inform comms and shift the perception of sharing on IG.**

13 Insight #3: **Teens indirectly impacted a household's perception of IG through their behavior  
14 on and off platform.** Seeing a teen use filters, deliberate before posting, obsess over metrics,  
15 engage in isolation, or use a secondary account translated to well-being concerns for parents  
16 and sharing implications for preteens (noted above).

## 17 Executive summary

18 Context: The **Household Ecosystem study** was a multi-method approach to  
19 understand how the use of social media products, like Instagram, impacts a  
20 household. We looked across teen and preteen siblings and their parents/guardians  
21 and discovered yet another reason **why teens matter for Instagram: Teens shape  
22 the household's perception of Instagram.**

23 Insight #1: **Teens were often the reason other household members joined**

[See More](#)

\*The Household Ecosystem study was a six-month primary research study with 18 rural and urban families from across 12 cities in the US. The methodology included 64 remote interviews with family members (mom, dad, teen, preteen, the occasional grandparent), 14 remote dyad interviews, 8 in-home ethnographies, and 7 remote ethnographies.

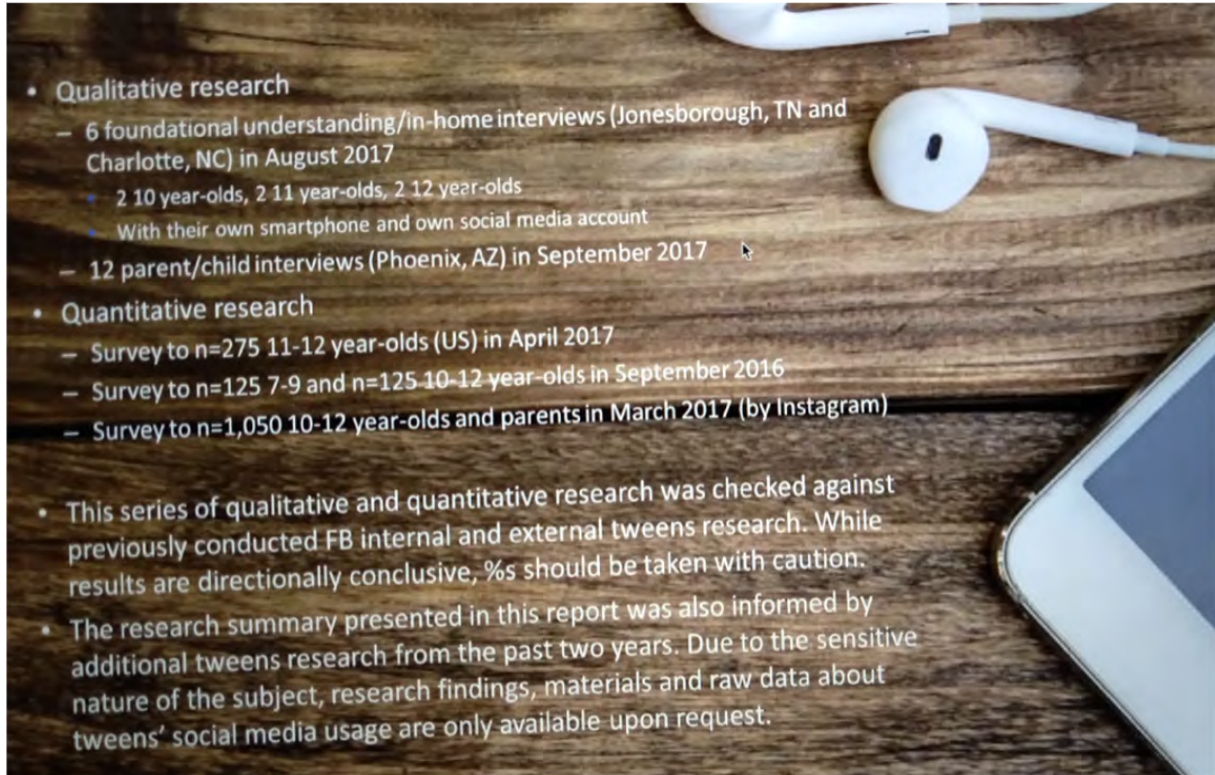

When it comes to IG you can think of the teen as the nucleus of the household. The teen serves as the information and administrative center of the family, **informing everyone else's experience or IG by impacting perception and usage across generations.**

The most common reason for a parent to join IG was to be able to learn and participate in this part of their teen's world. They joined to better understand the app, see what their child shared, and observe who their child followed.

FBP 24/09, *Instagram Insights*, "The Role of The Teen in Shaping a Household's Experience of Instagram," at p. 1, 2, 5, 6.

29. Meta also knows that its Instagram product is widely used by pre-teens under the age of 13. Despite it being illegal for Meta to knowingly permit persons under the age of 13 to use its platform, Meta has spent millions (if not billions) of dollars over the last decade studying "tweens" to determine how to make its product more appealing to and increase engagement among them. Meta sees children under 13 as a tappable and valuable market, which it must capture and use to increase revenue and ensure competitive positioning in the long-term,

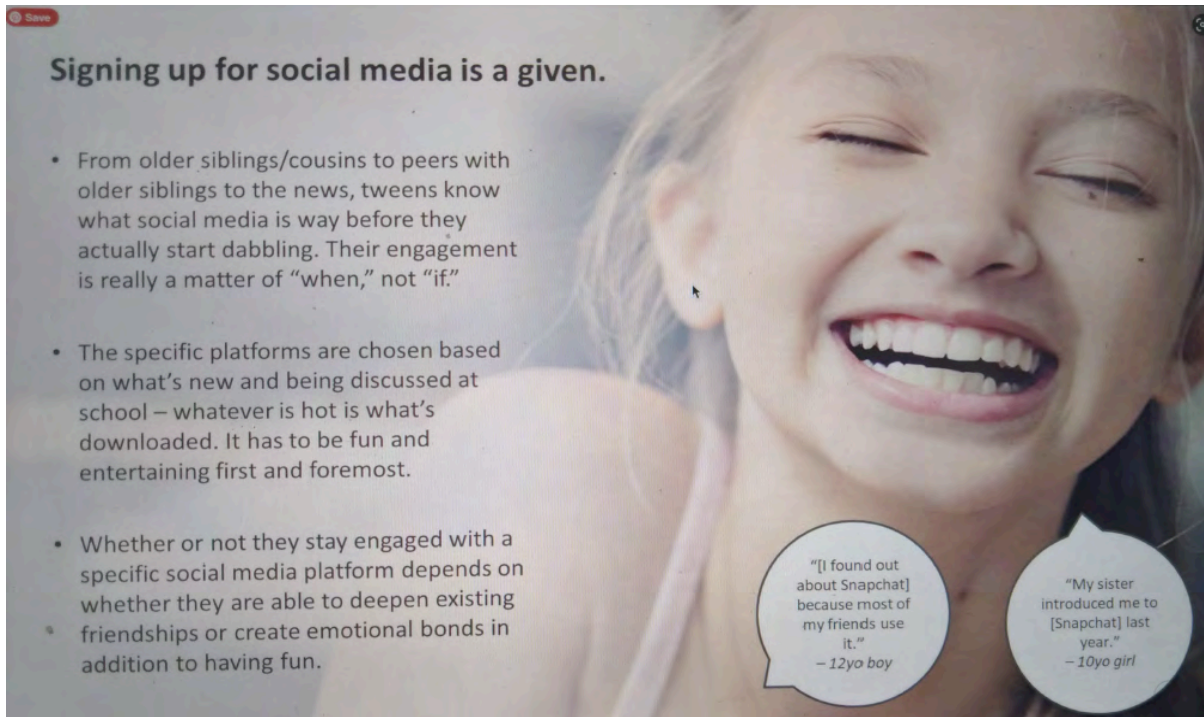

FBP 42/03, "Tweens and Social Media" (October 2017), at p. 7.

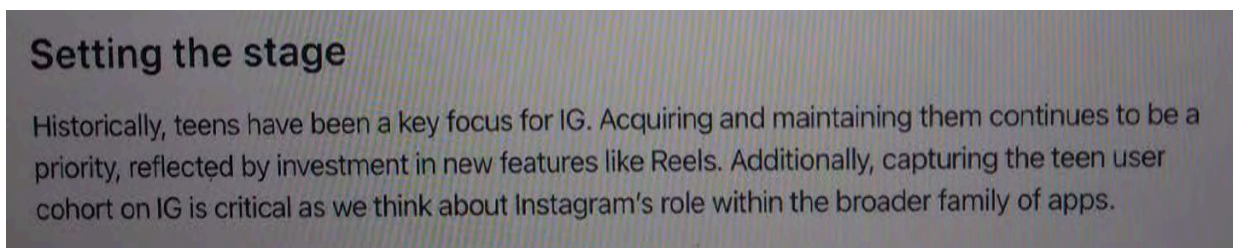

FBP 42/03 at p. 9, 17. Again, these are internal Meta documents. The first sentence of FBP 42/03 explains that “[t]his deck is meant as an introduction to the tween demographic and their social media use.” *Id.* at p. 1.

30. Meta also studies and conducts experiments aimed at ensuring “steady acquisition and stable retention of new teens”<sup>4</sup> (age 13 to 17),

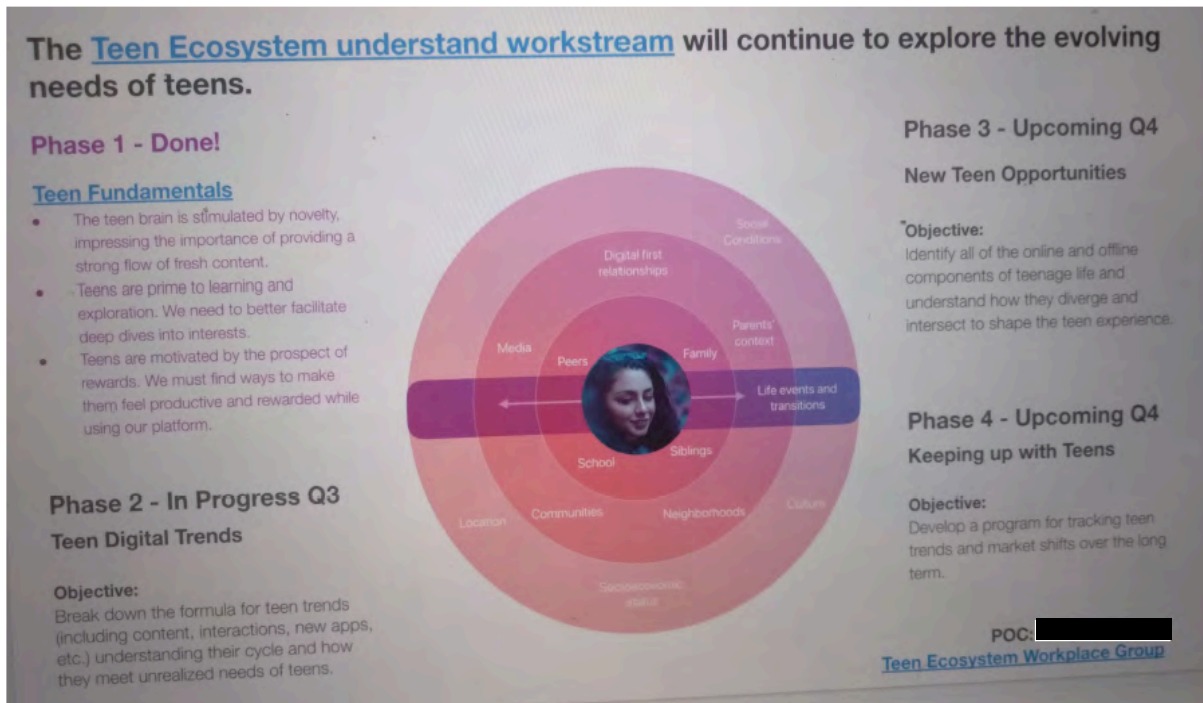

FBP 24/09, *Instagram Insights*, “The Role of The Teen in Shaping a Household’s Experience of Instagram,” at p.5.

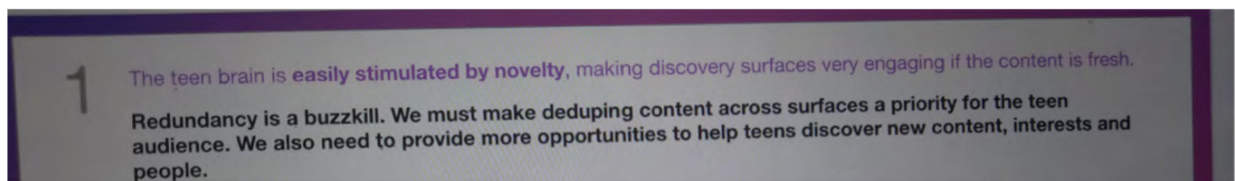

31. A constant theme among the thousands of internal Meta documents provided to

<sup>4</sup> FBP 24/04, “How are Teens Doing on Instagram? Instagram Teen Analysis” (July 2019), at p. 15.

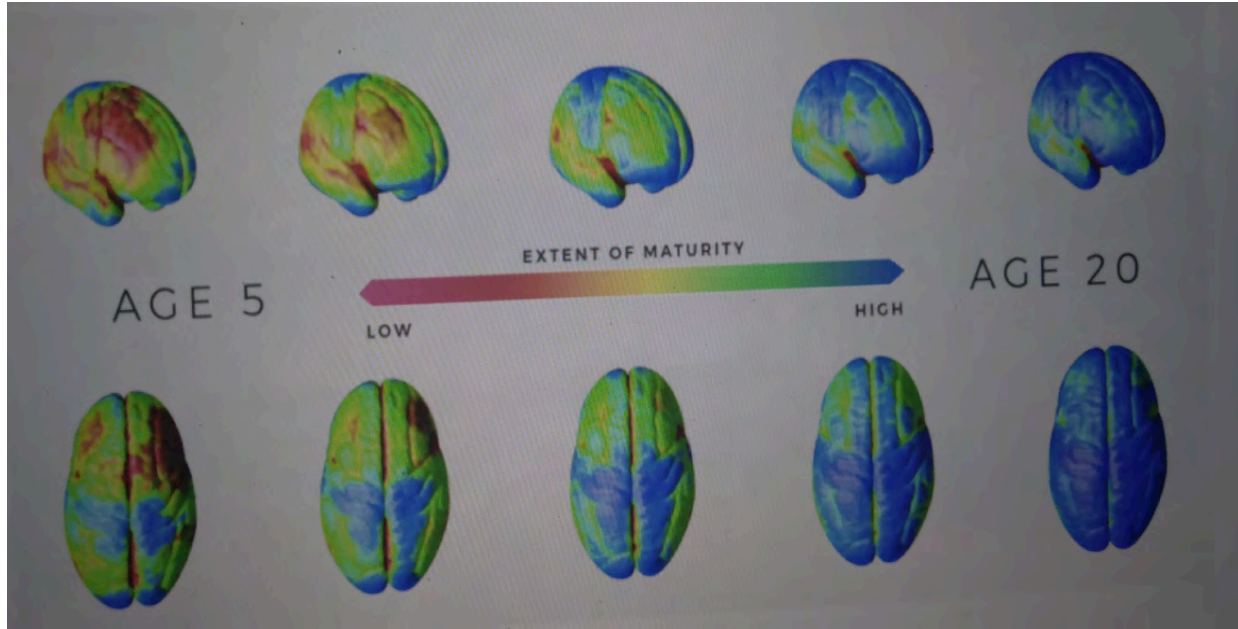

the SEC in late 2021 is that young users are a “priority demographic,” and Meta leadership will do anything to increase and maintain engagement. Indeed, on October 26, 2021, the New York Times reported on a 2018 internal Meta marketing report lamenting loss of teenage users to competitors’ platforms as “an existential threat.”<sup>5</sup> Meta spends billions on these efforts.

FBP 42/15, “The Power of Identities: Why Teens and Young Adults Choose Instagram - A UXR, Market Research and Data Perspective,” at p. 35. Meta goes so far as to study brain development in children and teens, to identify vulnerabilities and other areas where it can adjust its product and approach to appeal more to the teen demographic.

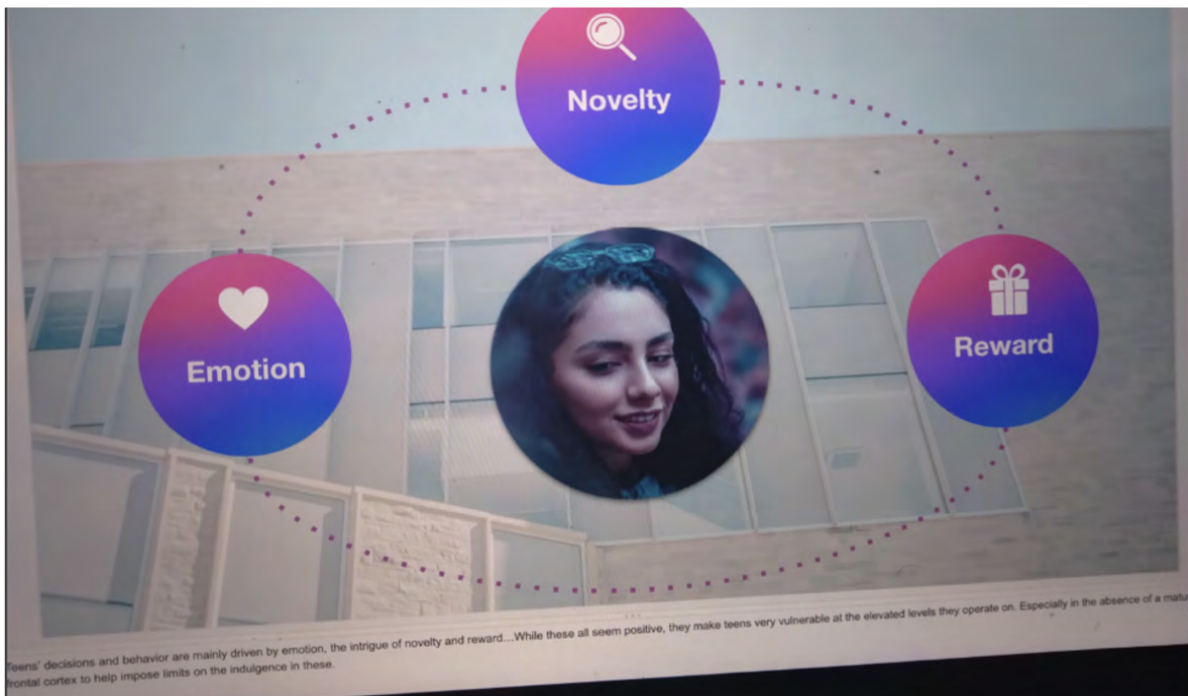

<sup>5</sup> <https://www.nytimes.com/2021/10/16/technology/instagram-teens.html>

*Id.* at p. 50-51.

32. In Meta’s words, “[t]he teenage brain is usually about 80% mature. The remaining 20% rests in the frontal cortex – the area of the brain responsible for ... At this time teens are highly dependent on their temporal lobe where emotions, memory and learning and the reward system reign supreme ... Teens’ decisions and behaviors are mainly driven by emotion, the intrigue of novelty and reward ... While these all seem positive, *they make teens very vulnerable* at the elevated levels they operate on. Especially in the absence of a mature frontal cortex to help impose limits on the indulgence in these.” FBP 42/15, “The Power of Identities: Why Teens and Young Adults Choose Instagram - A UXR, Market Research and Data Perspective,” at p. 52-53 (emphasis added).

33. In fact, on several occasions Meta has identified product features that cause harm to its teen users, including things like visible “Likes” (see, e.g., FBP 37/20, “Project Daisy Launch Discussion” (February 6, 2020), document title Project Daisy Mark Review 00 As Presented to Mark Deck; FBP 37/21, *Teen Meaningful Interactions and Feed Post Feedback – Focus Groups*

(May 13, 2008), document title Project Daisy Mark Review; FBP 36/50, *Additional Research as of H2 2020 (Details)*, “Project Daisy, Likes, and Social Comparison”) and lack of restrictions on Direct Messages when it comes to teen users. *See* FBP 42/16, “How should we default new teens into new interactions settings?: a survey of safety and value,” (H1 2020), at p. 3-4. Meta studied these harms and obtained recommendations for product changes that would make Instagram less harmful to teen users; only for Meta leadership to determine that the risk of losing popularity and engagement among Instagram’s teen user base (and potential loss of advertising revenue in the case of “likes”) outweighs the harms these product features are unquestionably causing American teens. *See, e.g.*, FBP 36/50; FBP 42/16; FBP 37/21, “Teen Meaningful Interactions and Feed Post Feedback – Focus Groups” (May 2018), at p. 7 (“Likes, comments, and Direct Messages are all **very** important to teens.”).

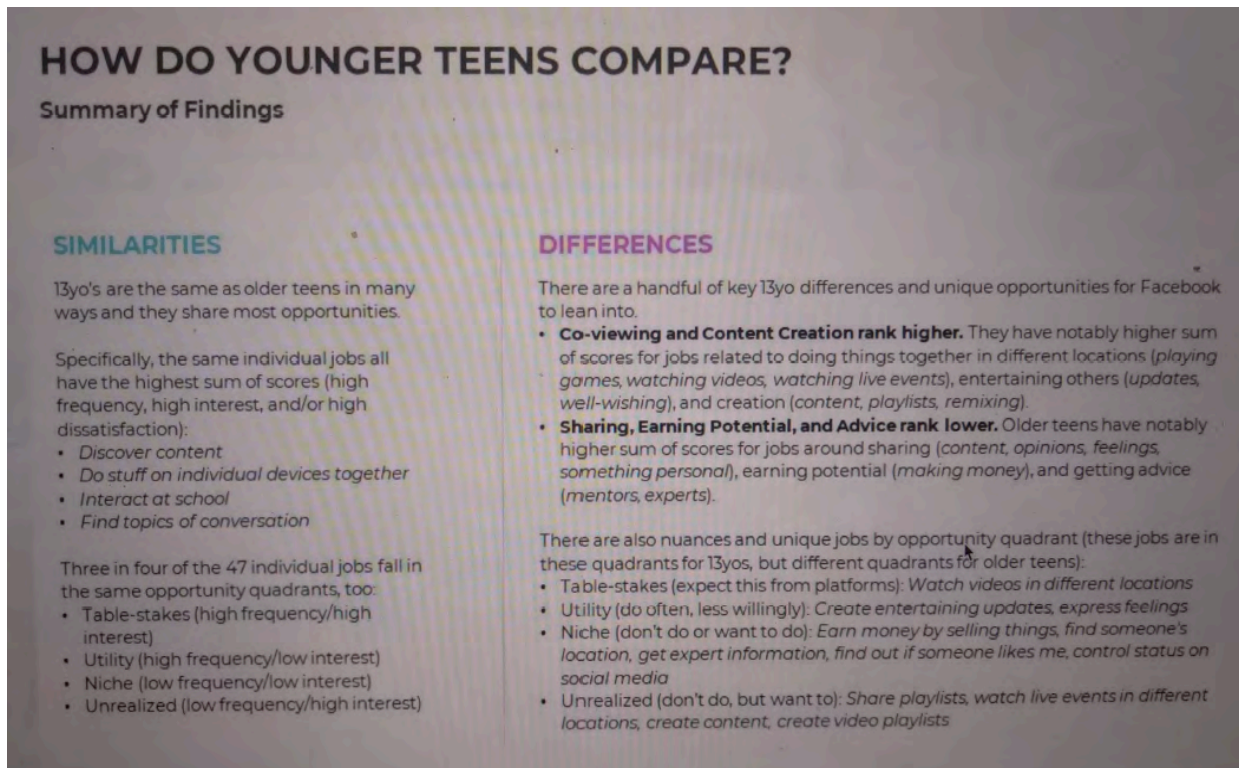

- Likes, comments and Direct Messages are all **very** important to teens. The volume of interactions and who they are coming from are an indication of closeness from friends. Teens seem very sensitive to receiving interactions and their emotions are directly correlated to the type and amount of interactions they receive.

34. Meta knows that teens are more vulnerable and suffer harms from use of the Instagram social media product at higher rates than adult Instagram users. At the same time, however, Meta’s data—created with technologies Meta has developed to identify teen users at a mass scale and irrespective of the age provided upon account opening—confirms the fact that teens access social media longer and more often than adults. Advertisers are willing to pay a premium for unfettered access to child and teens so Meta, in turn, works hard to make its Instagram social media product as appealing to teens as possible, even though it is harmful to teens.

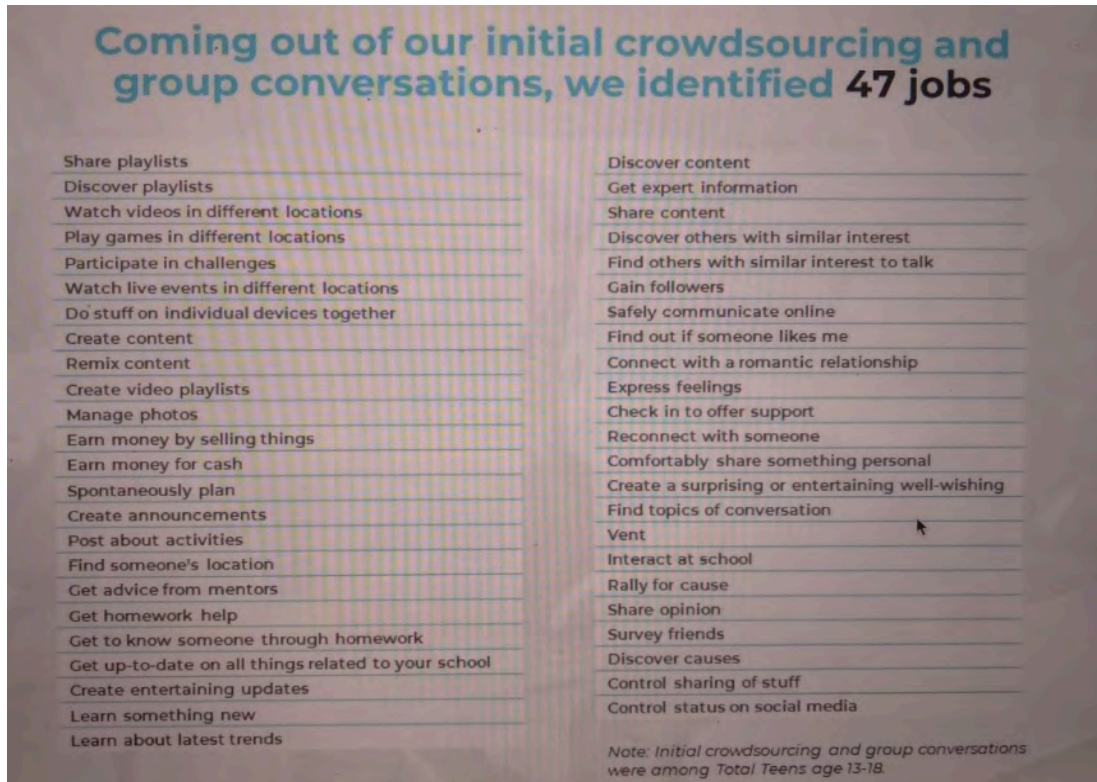

35. Meta even refers to teen engagement and, in turn, the financial benefit teen engagement provides to Meta as “jobs”—that is, and as understood by Plaintiffs, Meta is constantly evaluating the jobs children and teens can do for Meta’s benefit alone,

FBP 42/17, “Teen Communication Jobs to be Done 13 Year Old Analysis” (March 2019), at p. 1.

FBP 42/17 at p. 4-6.

#### **E. Meta's Singular Focus on Profits Over Safety**

36. Meta knows the harmful impact its products have. Instead of warning users and/or re-designing its product to make it safer, however, Meta senior leadership conducts extensive economic calculations and chooses enhancing profits over protecting human life.

37. Internal, non-public data collected by Meta reveal large numbers of its users are “addicted” to its social media products. Indeed, the problematic use identified in medical literature is precisely the type of use Meta has designed its product to encourage through psychological manipulation techniques—sometimes referred to as persuasive design—that is well-recognized to cause all the hallmarks of clinical addiction.

38. Meta also “slowly switched” its News Feed (in its Facebook and Instagram products) from maximizing time-spent to maximizing sessions, even though it knew that

maximizing sessions is harmful to its users.

39. Meta likewise knows that its “like” button causes harmful social comparison, and results in anxiety and depression in teens. Meta even conducted extensive testing, in connection with Project Daisy, which identified these numerically significant harms its product feature was causing, but Meta leadership ultimately rejected recommendations to launch Project Daisy (in its pure and effective form) due to the risk of a slight engagement decrease.

40. Meta likewise engages in a constant cost-benefit analysis when it comes to user safety vs. engagement—with engagement winning every time. Meta documents show that Meta has repeatedly refused to protect its users from harm for fear of offending other users, decreasing teen engagement, and/or losing advertiser revenue as a result. But human life vs. greater profit is not a choice Meta has the right to make.

41. One example of this is found in a document titled “Exposure to integrity harms is a worse experience than ‘Over-enforcement,’” dated March 31, 2020 (FBP 09/15). This document analyzes the degree to which users are harmed by “Integrity Problems” like bullying, violence, and sexual content as compared to the degree to which users are harmed by having their content mistakenly identified as violating and taken down. The purpose of this study was to convince Meta leadership that “we should be more aggressive in our enforcements, and more willing to tolerate false positives when we set precision/recall thresholds for classifier-based actions.”<sup>6</sup>

---

<sup>6</sup> Nor was this the first time a study was conducted and reported on to convince Meta leadership to adjust its lever to better protect users from recommendation driven harms. *See, e.g.*, FBP 08/11, *TRIPS: Tracking Reach of Integrity Problems Survey*, “Users’ Perception of Facebook’s enforcement of Community Standards” (“Actors in the US are more concerned about over-enforcement than actors in the rest of the world”); FBP 08/10, “Overenforcement Update” (March 12, 2020), (this report notes that Instagram’s failure to validate user emails results in increased risk, and also links to the Instagram Recommendation Quality Guidelines which “define what content we don’t consider safe and appropriate for everyone on Instagram and, therefore, try not to recommend.”).

## Exposure to integrity harms is a worse experience than "Over-enforcement"

### TLDR

- Encounters with integrity harms are on average rated as more negative experiences than errors in Facebook's enforcement process.
- As we consider collateral damage of demotions, this might drive use to be more willing to tolerate false positives when we set precision/recall thresholds for classifier-based actions.

### DETAILS

The TRIPS tracking survey asks users whether they have experienced various integrity harms, in the last 7 days. Respondents who report having been reached by these negative experiences are asked to rate the intensity of their last experience, or how bad it made them feel.

Some users are also asked if they Facebook has ever removed one of their posts for violating Facebook's community standards, and are asked whether they think their post in fact violated those standards, and how bad the experience made them feel.

This plot shows the average intensity rating for each integrity harm area and the intensity rating given by those who thought their content was removed in error.

As the plot shows, encounters with integrity harms are on average rated as more negative experiences than errors in Facebook's enforcement process. To me this indicates that false-positive enforcement actions are less costly for users than failures to action against harmful content. This is evidence we should be more aggressive in our enforcements, and more willing to tolerate false positives when we set precision/recall thresholds for classifier-based actions.

FBP 09/15, "Exposure to integrity harms is a worse experience than 'Over-enforcement'"

(March 31, 2020), at p. 2-3.

42. In other words, Meta is perfectly capable of enforcing its own Terms of Service,

Community Standards, and other guidelines. It can adjust controls in a manner that would better protect its users, especially children and teens, from certain, significant harms caused by Meta's user setting options, recommendations, and other algorithmic-driven product features. Yet, Meta repeatedly conducts its engagement-driven, cost-benefit analysis and repeatedly chooses profit over human life. That is not a choice Meta has the right to make.

43. As described in detail by one high-level departing employee, Meta leadership has structured its three main groups—integrity, growth, and engagement—in a manner that actively frustrates and prevents the integrity group from making meaningful changes for the protection of Instagram users.

**2. Out of fears over *potential* public and policy stakeholder responses, we are *knowingly* exposing users to risks of integrity harms.**

## 5. In light of the 4 points above—Building with Integrity will be imperative to reducing integrity harms on FB.

- Mandates for integrity teams to demonstrate legitimacy and user value for all new interventions prior to launch are asymmetrical--There are no such blanket requirements for growth or engagement focused products to demonstrate user or integrity value (or integrity risk mitigation).
- This imbalance is untenable. If integrity teams continue to face increasing barriers to building safeguards for already built products, our only hope is to build it right (safe) the first time.
- Obviously non-integrity/growth-and engagement-focused teams don't want to build products that could be abused and lead to user harm. But there also aren't any consistent resources or incentives provided to help teams check for potential user harms or de-risk products at the outset.
- While some mechanisms for this do exist, they are often optional, time intensive, and occur too late in the development process to encourage meaningful change (i.e., after there are already many sunk costs).
- We need more formalized, official channels to support this work, along with organizational incentives to encourage universal building with integrity as an institutionally-supported, default practice.

Chats

FBP 08/46, “Move thoughtfully and fix things” (August 25, 2020), at p. 3, 6. More to the point, Meta leadership places no such barriers when it comes to growth and engagement. Instead, Meta develops and implements products and product features in a manner that deliberately fails to account for the safety of its users—including millions of children and teens in the US alone.

44. These same themes emerged in the departure memo published internally at Meta by Sophie Zhang in September 2020, which memo has received considerable attention in the press but has not been published by Meta or anyone for fear of the harm it might cause. Plaintiffs are not publishing that memo here but do point to comments made by other Meta employees in response to Ms. Zhang’s memo, which express, in no uncertain terms, the Meta senior leadership repeatedly refuses to take action on serious integrity issues unless it believes that it has no other

choice—that is, Meta will not fix product defects (even where needed to save human lives) unless it is convinced that the financial and public opinion cost of doing nothing will be greater than the impact on its revenue of doing what is legally and ethically required.

"...I was informed by a leader in my organization that my civic work was not impactful under the rationale that if the problems were meaningful they would have attracted more attention, became a press fire, and convinced the company to devote more attention to the space."

>How many people in management and leadership brushed her off with a "thanks" instead of recognizing the dire need for her to be given a proper team to tackle these issues?

>>why I've seen priorities of escalations shoot up when others start threatening to go to the press, and why I was informed by a leader in my organization that my civic work was not impactful under the rationale that if the problems were meaningful they would have attracted attention, became a press fire, and convinced the company to devote more attention to the space.

FBP 02/02, *Meta employee comments to Memo written by Sophie Zang* (September 7, 2020), at p. 23; *see also* FBP 16/12, "Attrition levels from Integrity teams?" (December 10, 2020), at p. 1 ("In a previous Q and A, Mark [Zuckerberg] was asked about attrition levels and he stated that ... If you disagree with FB, it's time for you to move on.").

In a previous Q and A, Mark was asked about attrition levels and he stated that 1.) Attrition is currently lower than normal 2.) If you disagree with FB, it's time for you to move on. This

## F. Overview of Claims

45. Plaintiffs bring claims of strict liability based upon Meta's defective design of its Instagram social media product that renders such product not reasonably safe for ordinary consumers or minor users. It is technologically feasible to design social media products that substantially decrease both the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Meta's product with a negligible increase in production cost.

1 In fact, Meta's employees have made proposals for product changes time and time again, as is also  
2 proven by Meta's internal documents, only for Meta controlling shareholder and CEO Mark  
3 Zuckerberg to refuse such changes based solely on the potential impact they might have to Meta's  
4 engagement and revenue numbers. The following is from a Wall Street Journal article published  
5 September 15, 2021,<sup>7</sup>

6 Anna Stepanov, who led a team addressing those issues, presented Mr. Zuckerberg with  
7 several proposed changes meant to address the proliferation of false and divisive content  
8 on the platform, according to an April 2020 internal memo she wrote about the briefing.  
9 One such change would have taken away a boost the algorithm gave to content most likely  
10 to be reshared by long chains of users.

11 "Mark doesn't think we could go broad" with the change, she wrote to colleagues after the  
12 meeting. Mr. Zuckerberg said he was open to testing the approach, she said, but "We  
13 wouldn't launch if there was a material tradeoff with MSI impact."

14 See also FBP 15/12, *Soft Actioning – MZ Feedback communication* (April 22, 2022), at p. 1 (the  
15 "April 2020 internal memo" referred to by the Wall Street Journal),

16 Attached is the material we shared with Mark, and below is a recap of the guidance we  
17 received:

18 1) **For Probable Violating**: Overall is supportive as a 'break the glass' measure, but with a 50%  
19 max cap. Not supportive of account-level demotion, so we will NOT be launching this. *There  
20 are still discussions ongoing between CI/XI/Policy leadership on the best way forward for  
21 these types of classifier-based demotions and we will post a follow up to this soon.*

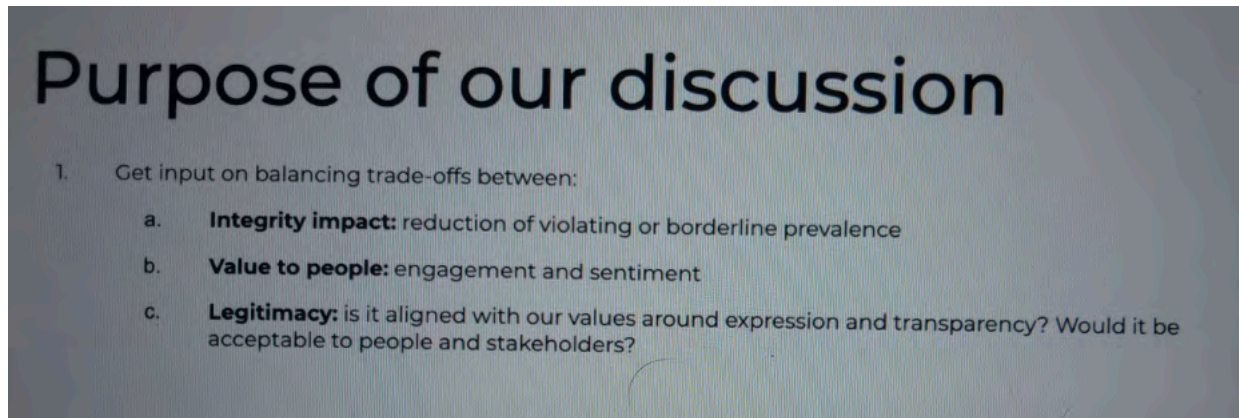

22 2) **Downstream model deprecation**: Mark doesn't think we could go broad, but is open to  
23 testing, especially in ARC. We wouldn't launch if there was a material tradeoff with MSI impact.  
For a bit more context: this is an extension of launches done earlier this year on health and  
civic content, as well as some launches going out this week specific to ARC, like Ethiopia and  
Myanmar.

3) **Informative Friction**: This is a good set of tactics to push on. Indirect signals are okay, but  
would need direct language in the interstitial, so for instance for misinfo, copy would need to  
be something other than 'we think it's misinfo.' For now, we are still prioritizing launches that  
are based on direct signals, like out of date content, or content that has been frequently  
reported, because these are more straightforward from a content strategy standpoint, and so  
we think we'll be able to launch and realize the expected Integrity gains more quickly.

22 *Id.* at p. 6. It discusses “Even Bigger Product Changes We’ve Thought About,” including  
23 “Complete removal of the downstream MSI boost, for all content, globally. The tradeoff here

would likely be between **high integrity gains + low legitimacy risk at the expense of value to people, in the order of a 3-5% hit on MSI.**

## Even Bigger Product Changes We've Thought About

1. Removing reshare button—in general, or on depth > X
2. Full disclosure of reshare chain to people similar to seeing a 'fwd' thread
3. Limit sharing based on behaviors (e.g. can't reshare unviewed articles, require that users add text/commentary to the post prior to being able to reshare)
4. Rate limiting reshares
5. Limit resharing based on content themes (e.g. can't reshare health content)
6. Complete removal of the downstream MSI boost, for all content, globally. The tradeoff here would likely be between high integrity gains + low legitimacy risk at the expense of value to people, in the order of a 3-5% hit on MSI.

*Id.* at p. 35 (emphasis added). What's clear from the Facebook Papers is that Meta and its competitors in the social media space *could* provide social media products that do not promote or amplify harmful content to teens and children—these companies simply choose to not do so as that would mean not relying on harmful algorithms and fewer billions of dollars in revenue.

47. Meta has consistently and knowingly placed its own profit over the health and welfare of its teen and child users, recognizing astronomical gains at their expense.

48. Plaintiffs also bring claims for strict liability based on Meta's failure to provide adequate warnings to minor users and their parents of danger of mental, physical, and emotional harms arising from foreseeable use of its Instagram social media product. The addictive quality of Instagram and its harmful algorithms are unknown to minor users and their parents.

49. Plaintiffs also bring claims for common law negligence arising from Meta's unreasonably dangerous Instagram social media product and its failure to warn of such dangers. Meta knew, or in the exercise of ordinary care should have known, that its social media product was harmful to a significant percentage of its minor users and failed to redesign its product to

1 ameliorate these harms. Meta also failed to warn minor users and their parents of foreseeable  
2 dangers arising out of use of its Instagram product.

3 50. Meta's own former and/or current developers often do not allow their own children  
4 and teenagers to use the Instagram product.<sup>8</sup> For many years, Meta has had actual knowledge that  
5 its Instagram social media product is dangerous and harmful to children but actively concealed  
6 these facts from the public and government regulators and failed to warn parents about this known  
7 harm for continued economic gain.

8 51. Plaintiffs also bring claims under California's Unfair Competition Law ("UCL"),  
9 Cal. Bus. & Prof. Code, §§17200, *et seq.* The conduct and omissions alleged herein constitute  
10 unlawful, unfair, and/or fraudulent business practices prohibited by the UCL.

11 52. Plaintiffs also bring a claim for unjust enrichment. Defendant received a direct  
12 benefit from Alexis Spence's problematic and harmful use of its product, both from the amount of  
13 time she spent on Instagram and from her creation of multiple accounts. Under the circumstances  
14 stated herein, it would be unjust and inequitable for Defendant to retain those ill-gotten benefits.

15 53. Finally, Plaintiffs bring a claim for invasion of privacy under California law.  
16 Defendant's conduct detailed herein frustrated and intruded upon Plaintiffs Kathleen and Jeffrey  
17 Spence's fundamental parental rights to protect their child and to monitor and control their child's  
18 use of social media, and this intrusion occurred in a manner that was highly offensive to a  
19 reasonable person.

20 54. Plaintiffs' claims do not arise from third-party content, but rather, Meta's product  
21 features and designs, including but not limited to algorithms and other product features that addict  
22

23 

---

<sup>8</sup> See, e.g., <https://www.foxnews.com/tech/former-facebook-exec-wont-let-own-kids-use-social-media-says-its-destroying-how-society-works>

1 minor users, amplify and promote harmful social comparison, affirmatively select and promote  
2 harmful content to vulnerable users based on its individualized demographic data and social media  
3 activity, put minor users in contact with dangerous adult predators, and otherwise prioritize  
4 engagement (and Meta profits) over user safety.

## 5 **II. PARTIES**

6 55. Plaintiffs Alexis Spence, and her parents Kathleen and Jeffrey Spence, reside in  
7 Yaphank, New York. Alexis opened her first Instagram account sometime in 2013, when she was  
8 only 11 years old. Upon information and belief, Meta required her to assent to its Terms of Service  
9 at that time. However, Alexis stopped accessing all Instagram accounts on April 29, 2022 and  
10 disaffirms any contractual terms Meta might now claim. Disaffirmation was made within a  
11 reasonable time of Alexis' eighteenth birthday.

12 56. Defendant Meta is a Delaware corporation with its principal place of business in  
13 Menlo Park, California. Meta owns and operates the Facebook and Instagram social media  
14 platforms, applications that are widely available to users throughout the United States.

## 15 **III. JURISDICTION AND VENUE**

16 57. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a)  
17 because the amount in controversy exceeds \$75,000, and Plaintiffs and Meta are residents of  
18 different states.

19 58. This Court has general jurisdiction over Defendant Meta because Meta's principal  
20 place of business is California and Meta is "at home" in this State. This Court also has specific  
21 jurisdiction over Meta because Plaintiffs' claims set forth herein arise out of and relate to Meta's  
22 activities in the State of California.

23 59. Venue is proper in this District under 28 U.S.C. § 1391(b) because Meta resides in

1 the Northern District of California and a substantial part of the events or omissions giving rise to  
2 Plaintiffs' claims occurred in this District.

#### 3 **IV. FACTUAL ALLEGATIONS RELATING TO PRODUCT DEFECTS**

##### 4 **A. Facebook and Instagram Background**

5 60. Facebook is an American online social network service that is part of the Meta  
6 Platforms. Facebook was founded in 2004 and became the largest social network in the world,  
7 with nearly three billion users as of 2021, and about half that number were using Facebook every  
8 day. The company's headquarters is in Menlo Park, California. Facebook recently changed its  
9 name to, and is referred to herein and collectively with Instagram, as Meta.

10 61. Instagram is a photo sharing social media application. Its original focus was to  
11 facilitate communication through images by featuring photos taken on mobile devices. Instagram  
12 launched in October 2010 and Facebook acquired it for \$1 billion in April 2012. Once acquired,  
13 Instagram experienced exponential growth, design, and development changes. It went from 10  
14 million monthly active users in September of 2012 to 50 million weeks after the acquisition, to  
15 more than 600 million by December of 2016, and it continues to grow. Meta instituted dozens of  
16 product changes (also known as "growth hacks") that drove this increased engagement, but at the  
17 expense of the health and well-being of Instagram's users—especially teens and children.

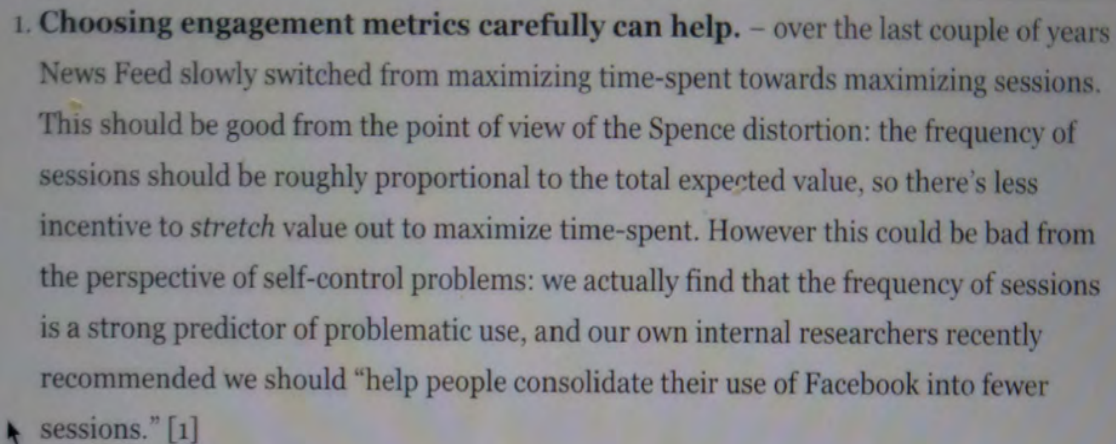

##### 18 **News Feed Product**

19 62. Both the Facebook and Instagram products show users a "feed." A user's "feed" is  
20 a comprised of a series of photos and videos posted by accounts that the user follows, along with  
21 advertising and content specifically selected and promoted by Instagram.

22 63. Meta exerts control over a user's Instagram "feed," including through certain  
23 ranking mechanisms, escalation loops, and/or promotion of advertising and content specifically

selected and promoted by Meta based on, among other things, its ongoing planning, assessment, and prioritization of the types of information most likely to increase engagement. In the case of certain user groups, like teens, this control translates to deliberate and repeated promotion of harmful and unhealthy content, which Meta knows is causing harm to its young users.

64. Over time, Meta “slowly switched” its News Feed (in its Facebook and Instagram products) from maximizing time-spent to maximizing sessions, even though Meta knows that maximizing sessions is harmful to its users,

1. **Choosing engagement metrics carefully can help.** – over the last couple of years News Feed slowly switched from maximizing time-spent towards maximizing sessions. This should be good from the point of view of the Spence distortion: the frequency of sessions should be roughly proportional to the total expected value, so there's less incentive to *stretch* value out to maximize time-spent. However this could be bad from the perspective of self-control problems: we actually find that the frequency of sessions is a strong predictor of problematic use, and our own internal researchers recently recommended we should “help people consolidate their use of Facebook into fewer sessions.” [1]

FBP 08/25, “When User-Engagement  $\neq$  User-Value” (December 10, 2020), at p. 8.

#### TL;DR

We propose to re-weight the existing predictive models that comprise the scoring function for Civic posts in feed to better optimize for both integrity outcomes and individual civic value.

#### Vision

Currently, Newsfeed ranks all posts by primarily optimizing for Sessions and MSI. For Civic posts in particular, however, we believe Newsfeed should rank for different objectives.

FBP 20/07, “Product Brief - Ranking for Civic Health,” at p. 2.

FBP 16/07, “Problematic Facebook use - when people feel like Facebook negatively affects their life” (July 31, 2018), at p. 15.

#### TL;DR

- More time spent per session is associated with lower risk of problematic use. Increasing a user's average time spent per session by 1s reduces a user's probability of problematic use by 0.03 to 0.1 percentage points.
- We should continue to guard against disproportionate increases in short sessions as we test product changes.

Note: for reference, the overall risk of problematic use was estimated to be about 3% as of April 2018.

FBP 16/00, “More time spent per session is associated with lower risk of problematic use” (August 19, 2019), at p. 2.

65. Recommendation-based feeds and product features also promote harmful content, particularly where, as in the case of Meta, the algorithm is being programmed to prioritize number of interactions and not quality of interactions,

- Recommendation systems are often prone to recommending bad content. As a simple example, every list I've ever seen of top content sorted by engagement rate (as opposed to overall engagement) has been heavily tilted towards problematic content. YouTube had a scandal around recommending conspiracy theories within the last six months, and the same phenomenon has been confirmed on Facebook.

1 FBP 09/21, “Giving People What They Want to See?” (September 16, 2019), at p. 3. Meta has  
2 confirmed several times its own systems and how they operate. *See, e.g.*, FBP 20/08, “Replacing  
3 Downstream MSI for Civic and Health - Phase 1,” at p. 9 (“The principal way MSI works on such  
4 public content, however, is via downstream models ... Because MSI is designed to boost friend  
5 interactions, it doesn’t value whether you’ll like a piece of content posted by the New York Times,  
6 Donald Trump, the Wall Street Journal, etc. Instead, the way such content creators can contribute  
7 to MSI is by posting content that you might reshare for your friends to engage on or reshare  
8 themselves. This is precisely what we predict and uprank via d\_share\_msi\_score.”); FBP 25/04,  
9 “Max Reshare Depth Experiment” (November 6, 2019), at p. 2 (“[R]eshare depth ... is correlated  
10 with misinformation . . . other integrity harms also correlate with reshare depth.”); FBP 27/17,  
11 “Groups Reshare Depth: an Observational Study Combined with an Interesting AB Test”  
12 (November 5, 2019), at p. 2, 17 (“Our observational results confirm that for Groups posts deeper  
13 reshares are associated with higher prevalence of FUSS Red or Yellow content . . . The multi group  
14 picker looks great for increasing engagement--MSI, sharing, and many other metrics are up . . .  
15 problematic content is indeed associated with higher reshare depths up to depth 10.”).

16 66. In 2021, Senators Richard Blumenthal, Marsha Blackburn, and Mike Lee tested  
17 and confirmed the fact that Meta’s recommendation-based feeds and product features promote  
18 harmful content by having several accounts opened while providing information indicating that  
19 the users were teenage girls,

"Within an hour all of our recommendations promoted pro-anorexia and eating disorder content," Blumenthal said. "Nothing has changed. It's all still happening."

Sen. Mike Lee, R-Utah, said his office created an account for a 13 year old girl. Shortly afterward, the algorithm recommended a famous female celebrity to follow and when they did, Lee said, "It went dark fast."

The fake account was flooded with content about diets, plastic surgery and other damaging material for an adolescent girl, he said.

In another example this week, Blackburn's staff exposed a flaw in Instagram's setting for teens under 16.

According to Instagram's policies, new teenage accounts should automatically default to a private setting. But when Blackburn's team set up a phony account for a 15 year old girl, it automatically defaulted to public.

Mosseri acknowledged the error, explaining the mistaken default setting was triggered because the account was created on a web browser, as opposed to a mobile app.

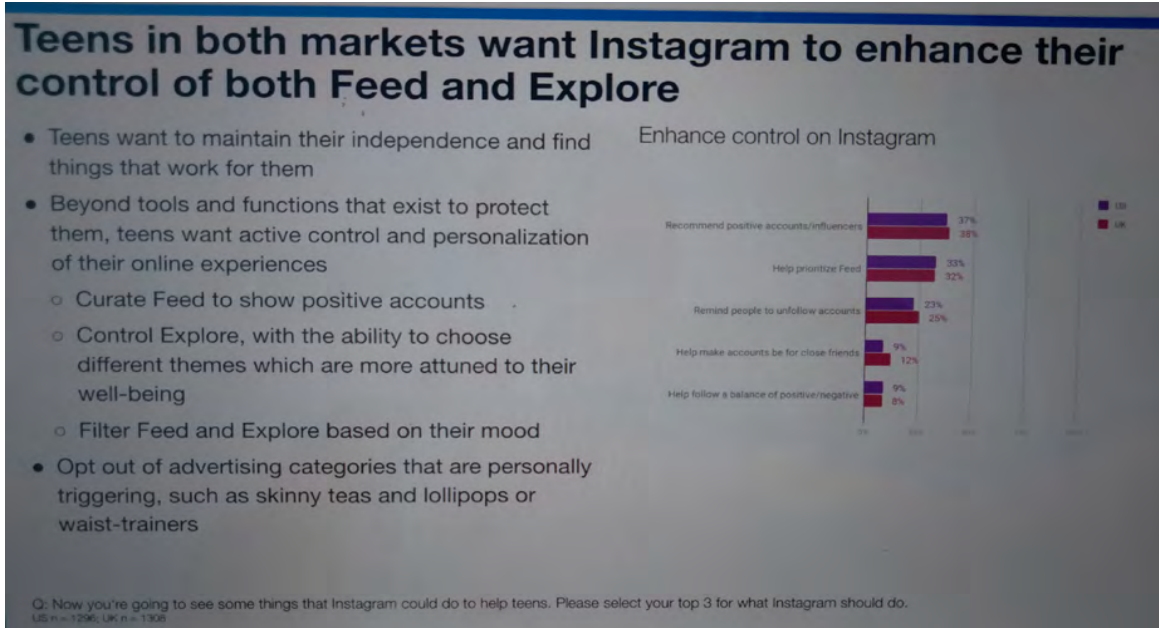

"We will correct that," he said.

See <https://www.npr.org/2021/12/08/1062576576/instagrams-ceo-adam-mosseri-hears-senators-brush-aside-his-promises-to-self-poli>. Meta has had almost a decade to fix these product defects but has not—instead, its products have severely harmed millions of teens in the U.S. alone, including Alexis Spence.

### **Explore Product**

67. Instagram has a search feature, called "Explore," where a user is shown an endless feed of content that is selected by an algorithm designed by Meta based upon the users' demographics and prior activity in the application. Again, Meta designed and operates its product in a manner that promotes harmful and/or unhealthy content. Meta is aware of these inherently dangerous product features and has repeatedly decided against changing them and/or

implementing readily available and relatively inexpensive safety measures, for the stated purpose of ensuring continued growth, engagement, and revenue increase.

FBP 23/01, “Teen Mental Health Deep Dive” (October 10, 2019), at p. 80.

68. More recently, Meta conducted additional studies to identify precisely which of its algorithmically promoted content is most harmful to users, and the degree of harm that content causes. Meta identified those categories, but ultimately determined that its promotion of such content is a large part of what makes the Instagram product appealing to teens. Meta decided against changing its current product as a result, and irrespective of identified harms.

In this study, we combine survey measures of **appearance comparison** (how much people think Instagram makes them feel worse about their bodies or appearances) with server data about the topics they had recently seen on Instagram.

FBP 24/12, “How the topics people see are linked to appearance comparison on IG” (March 9, 2021), at p. 3.

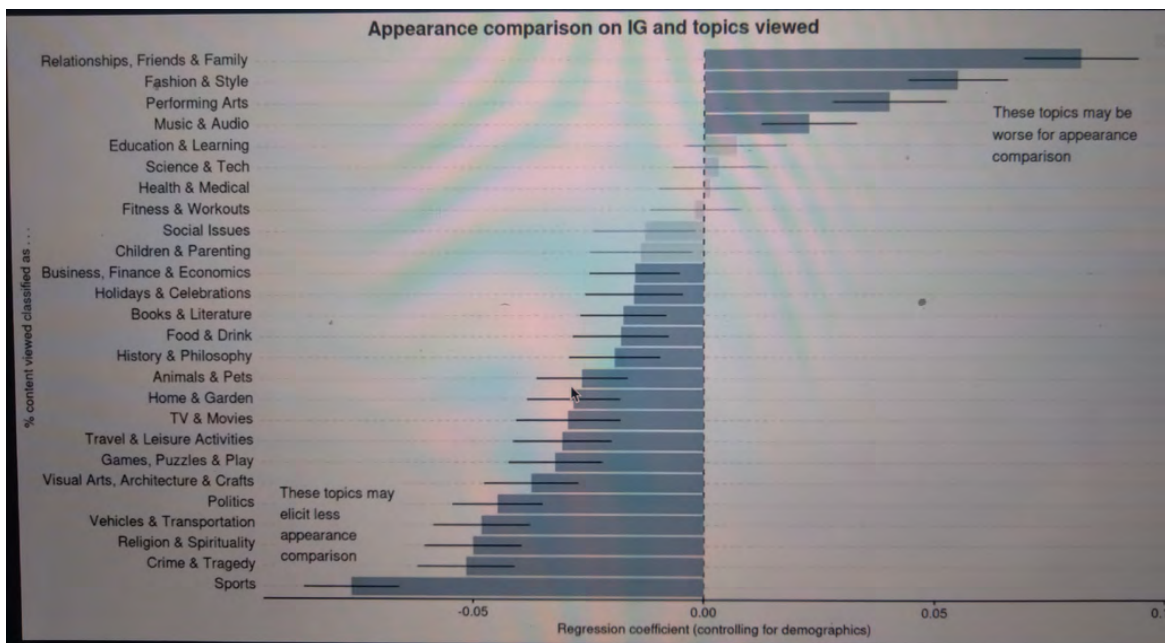

**Survey:** We surveyed 50,590 people in 10 countries (Australia, Brazil, France, Germany, Great Britain, India, Japan, Korea, Mexico, United States) in December 2020. See our [previous note](#) for more details ([full survey](#)).

**Behavioral data:** We paired survey data with the content respondents viewed in the 14 days prior to the survey on Feed, Stories, Explore, Profiles, and Reels, and identified the topic(s) associated with each piece of content using the Facebook Interest Taxonomy for Instagram ([FIT](#)), a machine learning model that takes text, image, and video features into account. We also examined some XRay/Cortex features (concepts within the images and videos themselves).

## Findings

**People who see a greater proportion of content about fashion (which includes beauty), relationships (which includes dating and romance), performing arts, and music feel like Instagram makes them feel worse about their bodies and appearances** (Figure 1). Collectively, these topics comprise 27.4% of all content viewed by respondents with a FIT topic (33.2% of what teen girls saw).

FBP 24/12 at p. 5, 6, 7.

FBP 24/12 at p. 9.

**The topics that elicit appearance comparison comprise 1/4 of the content people see on Instagram, and 1/3 for teen girls.** This is an high amount and not all of it is problematic, but even reducing the prevalence of these topics down to 1/5 or 1/6 would go a long way toward addressing appearance comparison on Instagram, especially if we boost content about collective identities or activities instead.

FBP 24/12 at p. 38.

We should reduce exposure to celebrity content about fashion, beauty, and relationships, while increasing exposure to close friend content of all kinds. Potential product directions include:

- Demotions on Explore and Reels using topic and image/video features identified in this note
- Not recommending celebrities to follow that post primarily fashion/beauty content. People can find these accounts on their own, but we shouldn't amplify their influence through recommendations.
- Boosting content that elicits a collective identity (e.g., sports, tragedy) or activity (e.g., crafts, puzzles)
- Making it easier for teen girls to find and consume content from their friends, especially close friends.
- Nudging or pivoting people toward other content or other activities after they consume or seek out large volumes of fashion/beauty/relationship content.
- Applying "sexually suggestive" non-recommendable guidelines more aggressively for teen viewers.
- Providing better content controls to allow people to hide sexually suggestive photos and those that emphasize women's bodies or faces.

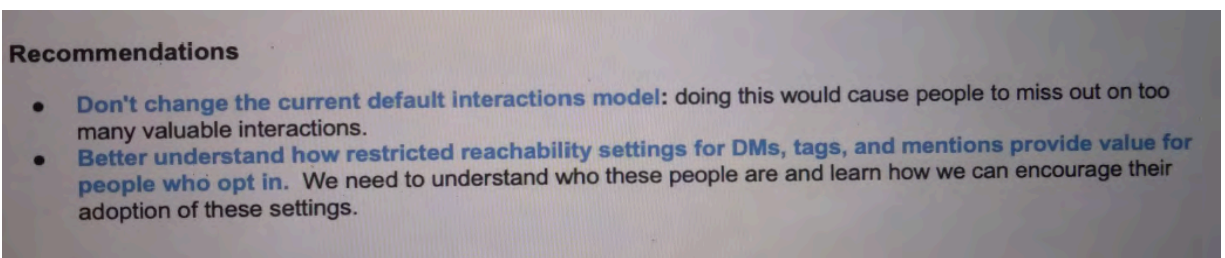

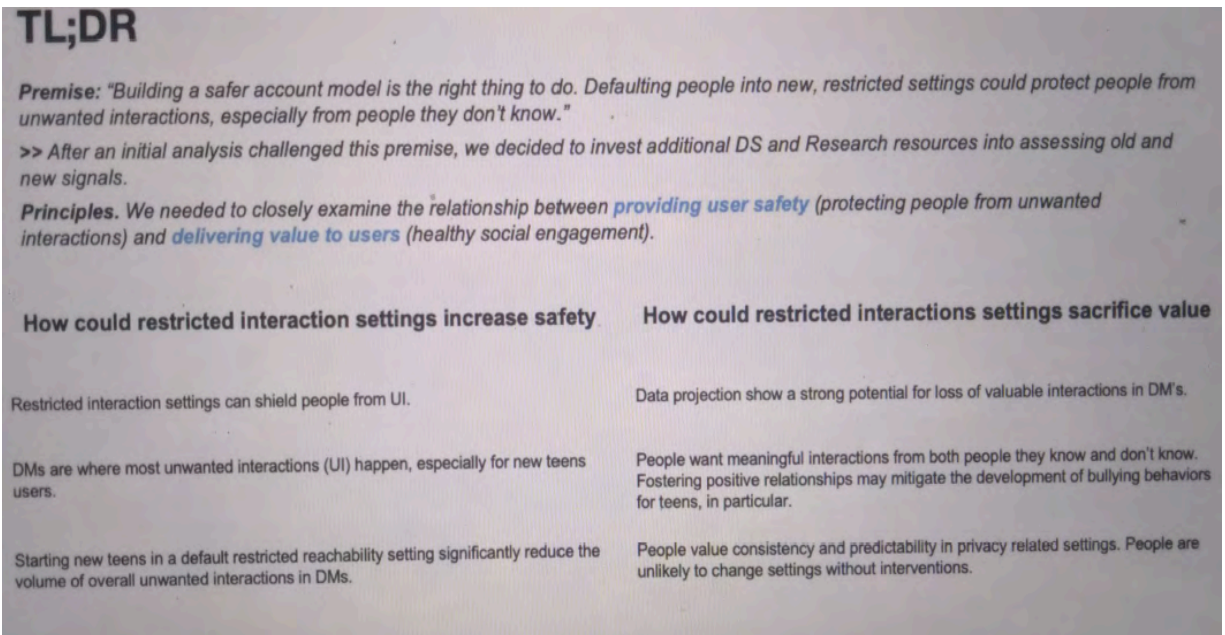

FBP 24/12 at p. 39.

### Profile Settings

69. Instagram profile default settings also cause harm. Users' profiles on Instagram may be public or private, which is a product feature over which Meta exercises complete control. On public profiles, any user can view the photos, videos, and other content posted by the user. On private profiles, the user's content may only be viewed by the user's followers, which the user must approve. During the relevant period, Instagram profiles were public by default and Instagram allowed all users to message and send follow requests to underage users.

70. Defaulting profiles to public served no critical purpose in terms of product functionality and/or a user's ability to access content. Instead, this product feature increases user engagement during onboarding (when a user first starts using Instagram) by increasing user connections. Unfortunately for young children and teens, a numerically significant percentage of those would-be connections are harmful. Meta is aware of the harm and previously opted to not make necessary and cost-effective changes to prevent it. The following is only one example,

FBP 42/16, "How should we default new teens into new interactions settings?: a survey of safety and value" (H1 2020), at p. 3-4.

### **Direct Messaging Product Feature and Access to "Vulnerable" Users**

71. Meta's Direct Message settings also permit and encourage harm to "vulnerable"

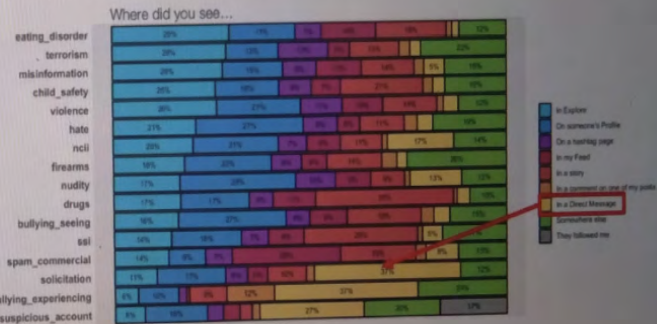

users. Harmful and dangerous interactions occur because of the Instagram direct message feature and current user settings, that is, Meta's chosen settings provide predators and other bad actors with direct and unsupervised access to children and teens. Meta knows this because its studies have confirmed that "DM's are where most unwanted interactions happen," including bullying and sexual exploitation of minors,

## DMs are where most unwanted interactions happen

- 7% of teens report experiencing bullying on Instagram each week. (H1 2019)
- According to NETS user survey, 40% of all bullying experiences are reported in Direct Messaging.
- B&H prevalence in DM's is very high (10%) according to the September prototype metric
- Severe violations targeted to those under 18 are known as a high prevalence problem in DMs

### PERCEIVED REACH: SURFACE BREAKDOWN

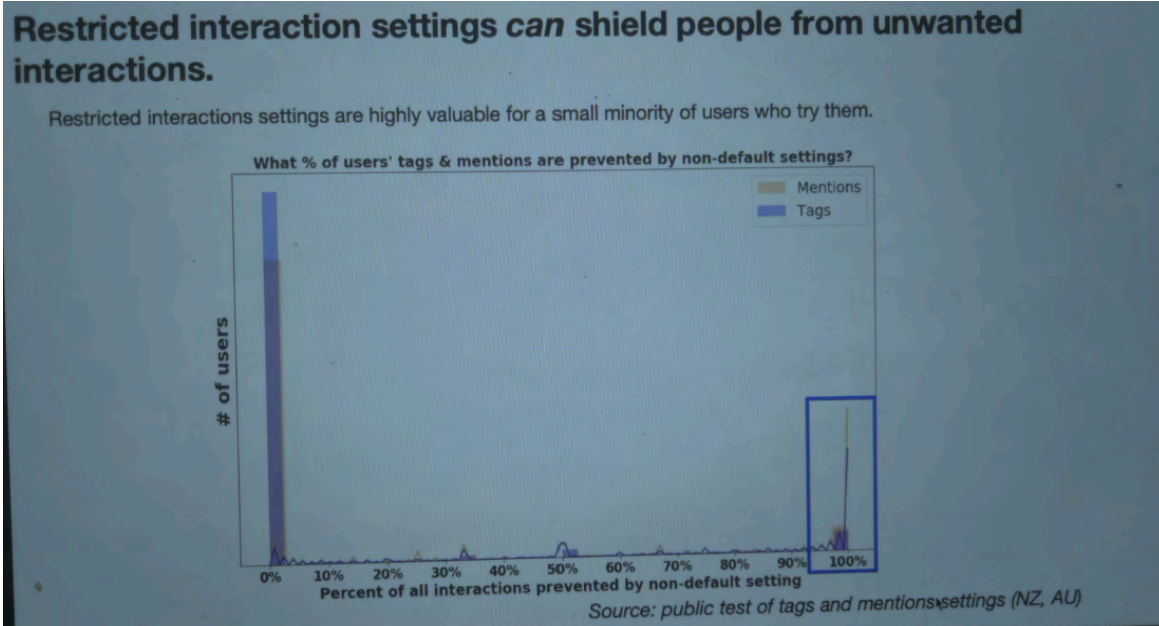

Explore and Profile are each the most common surfaces for 5 out of 16 negative experiences. In addition, Direct is the most common surface to encounter suspicious accounts, and to experience bullying and solicitation. People most commonly see drug sales and SSI in Stories, and see spam in Feed.

FBP 42/16, "How should we default new teens into new interactions settings?: a survey of safety and value" (H1 2020), at p. 11.

72. Again, however, Meta opted for engagement over safety. Meta confirmed that restricted interacted settings "can shield people from unwanted interactions" (emphasis in original), that teens delete roughly 53% of DMs from people they do not follow, and that "Deletions are a strong indication of unwanted interactions." FBP 42/16 at p. 10, 13-15. However, it also then considered the fact that a lot of teens keep DM threads and requests from people they do not follow, concluding that "So, defaulting new teens into a restricted setting could eliminate

up to half of both wanted and unwanted DM messages. This is a difficult tradeoff to navigate.” *Id.* at p. 15. To be clear, the tradeoff at issue involves harmful bullying and sexual exploitation of minors on the one hand and teens being able to talk to strangers, which they sometimes want to do, on the other hand. Once again, Meta inexplicably chose not to prioritize the safety of children and teens,

**Teens delete a lot of DMs from people they don't follow in their first four weeks on Instagram.**

**~53%**

of deleted DM threads & requests are from people the recipient doesn't follow.

**Deletions are a strong indication of unwanted interactions**

- 1 ~13% of new DM threads & requests deleted by the new users result in the recipient/new user blocking the sender (vs. ~6% of all DM threads & requests)
- 2 ~99% of all blocks involving a pair of users (new teen and sender) who had some DM interaction in the new user's first few weeks are associated with a deletion.

Teens also **KEEP** a lot of DMs from people they don't follow in their first four weeks on Instagram.

~53%

of deleted DM threads & requests are from people the recipient doesn't follow.

~55%

of kept DM threads & requests are from people the recipient doesn't follow.

So, defaulting new teens into a restricted setting could eliminate up to half of both wanted and unwanted DM messages. This is a difficult tradeoff to navigate.

## People are unlikely to change their interaction settings on their own.

- In the recent Better Interactions test, only 4% of views of tags and mentions entry points result the user clicking through to view the new settings options. Of these, about 15-20% result in a settings change — ultimately, only about 0.6-0.8% of users encountering these entry points actually make a change.
- Ultimately, ~0.5% of DAP in the six countries involved in the public test of tags and mentions settings adopted the change during the test period.

## Recommendations

- **Don't change the current default interactions model:** doing this would cause people to miss out on too many valuable interactions.
  - The value of DM's in promoting wanted social interactions forms key pieces of a healthy Instagram experience and social graph growth in teens.
  - Future product decisions should respect the value of DM interactions between unconnected users.
- **Restricted reachability in DMs, tags, and mentions can provide value for some people who opt in.**
  - Although, unwanted tags and mentions are a less serious problem for an overwhelming majority of users, we should still be proactive in meeting user needs and mental models of safety. While we feel good about balancing towards value, we can take proactive steps to honor when users desire safety.

FBP 42/16, "How should we default new teens into new interactions settings?: a survey of safety and value," (H1 2020), at p. 10, 13-15, 21, 23.

### Push Notifications and Emails

73. Meta's push notifications and emails encourage addictive behavior and are designed specifically to increase use of its Instagram product. Based on individualized data Meta collects, it then selects content and notification frequency for its users and notifies them via text and email. Instagram's notifications to individual users are specifically designed to, and do, prompt them to open Instagram and view the content Instagram selected, increasing sessions, and resulting in greater profits to Instagram. More to the point, even the format of these notifications has been designed and re-designed with the specific purpose of pulling users back onto the social media platform—irrespective of a user's health or wellbeing. As explained in one Meta report, written in 2019 and published (internally) in December 2020,

We limit the amount of information in notifications because we want people to come onto the site. A few years ago we stopped sending out emails telling you what happened – e.g. telling you what your friend did – instead we just say “someone commented on your post,” in the hope that you'll click through. This is a clear value-engagement tradeoff. We see similar effects on push notifications about friend activity: when we send fewer notifications, that *increases* engagement because people come to the site to check what's happening.

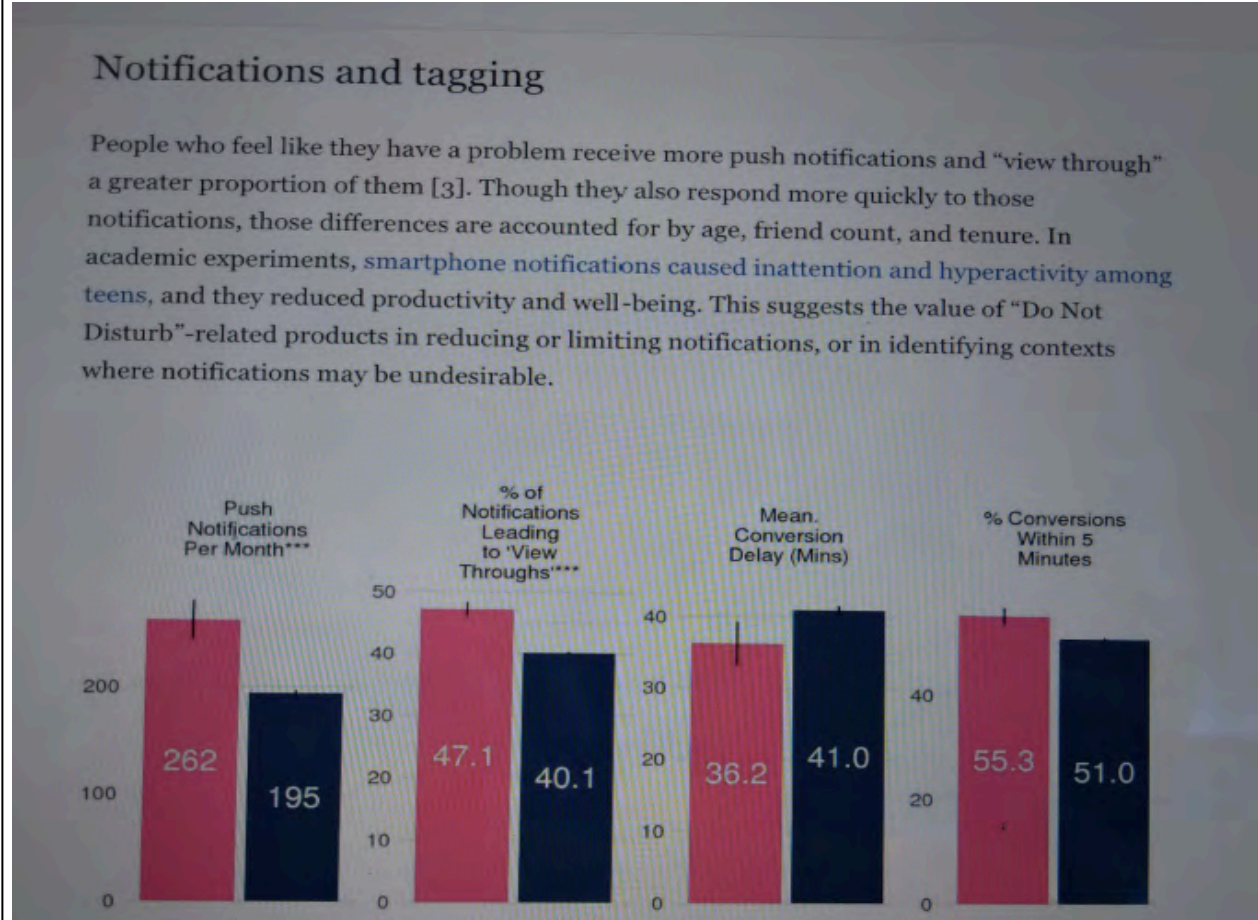

**Stretching value occurs in our products in a few ways.**

- 1. We limit the amount of information in notifications because we want people to come onto the site.** A few years ago we stopped sending out emails telling you what happened – e.g. telling you what your friend did – instead we just say “someone comment on your post,” in the hope that you'll click through. This is a clear value-engagement tradeoff. We see similar effects on push notifications about friend activity: when we send fewer notifications, that *increases* engagement because people come to the site to check what's happening.

FBP 08/25, “When User-Engagement ≠ User-Value” (December 10, 2020), at p. 4.

74. In fact, Meta sends more of these notifications to its most addicted users, knowing

that these users are the ones who have a harder time resisting the allure of this product feature,

FBP 16/07, “Problematic Facebook use - when people feel like Facebook negatively affects their life” (July 31, 2018), at p. 19.

### Reels and Stories

75. Instagram has also added features and promoted the use of short videos and temporary posts. The latter are referred to as “Reels” while the former is referred to as Instagram “Stories.” These products were developed to appeal to teens and Meta knows that these products are addictive, as well as defective. In 2019, Meta “ran an International cross-sectional survey to measure Problematic Use and ... Using behavioral signals from the people who responded to this survey, we arrived at a behavioral heuristic for problematic use.” FBP 16/11, “A Behavioral

1 Heuristic of Problematic Use” (January 6, 2020), at p. 2. The Meta employees charged with well-  
 2 being then recommended further investigation into “problematic use that is simple, intuitive,  
 3 interpretable and explainable.”

4 We propose a behavioral heuristic for problematic use that is simple, intuitive, interpretable  
 5 and explainable.  
 6 The heuristic consists of a combination of 5 behaviors that correlate with problematic use and,  
 7 we believe, should be behaviors we do not want to promote in new product launches.  
 8 We show that targeting the problematic use survey to a group of people who score highest in  
 9 the heuristic almost duplicates the detected prevalence of PU. We also show that CTR for the  
 10 QP promoting next-gen YTOF increases by 60-70% when targeting based on the heuristic. —

11 FBP 16/11 at p. 1. Among its initial findings was the observation that “features related to Stories  
 12 consumption keep being selected as highly predictive [for problematic use].” *Id.* at p. 5.

### 13 **The Story with Stories**

14 When evaluating different models and heuristics, and through the feature selection process,  
 15 we observed that features related to Stories consumption keep being selected as highly  
 16 predictive. While we suspect this is related to a pattern of passive, no-engagement  
 17 consumption that correlates with problematic use, we believe we do not have enough  
 18 research validity to decide that increasing Stories inventory or consumption is  
 19 uncontroversially “bad” and should be part of a health metric. We believe more internal  
 20 research on the relationship between Stories and problematic use is due.

21 FBP 16/11 at p. 5.

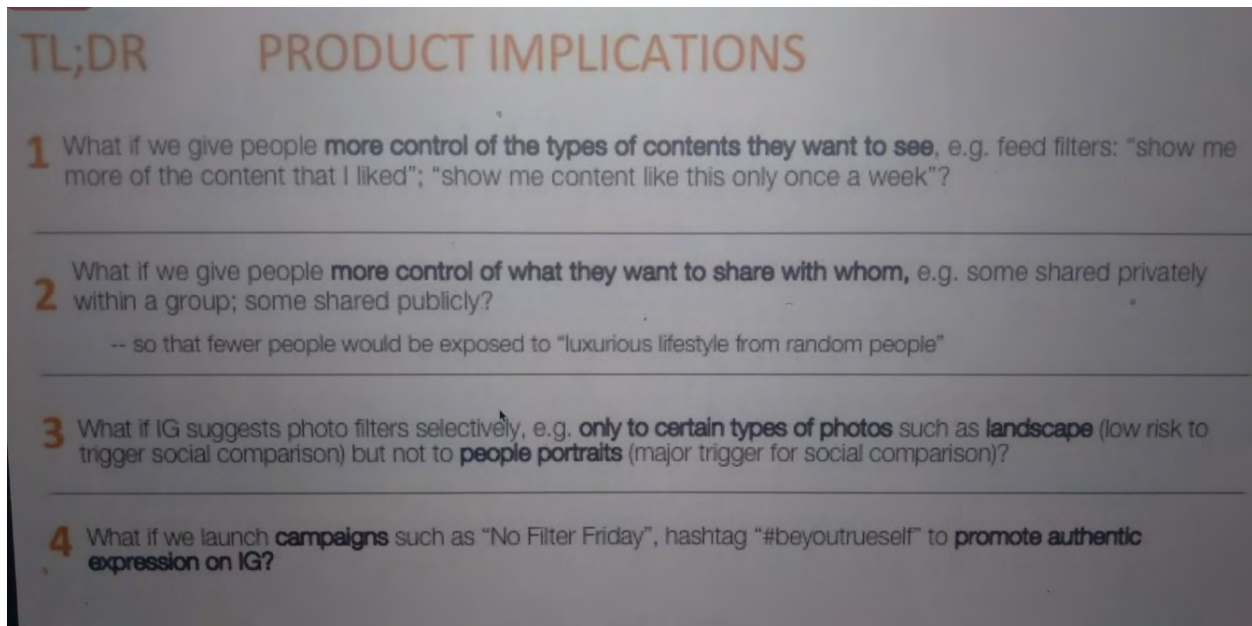

22 76. In other Facebook Papers, Meta explains the connection between its Stories product  
 23 feature and promotion of harmful content, particularly as it relates to teens. For example, “IG  
 stories can be named things that violate our policies for ED [Eating Disorders] ... Users can create  
 and maintain IG Story Highlights that are named violating terms.” FBP 19/21, “Eating Disorders  
 PRI Analysis Document” (March 2021), at p. 11. In other words, Meta has not yet implemented  
 the same content identifying technologies across all product features and continues to recommend

and promote harmful content as a result, including eating disorder content, as it did with Alexis Spence.

### **Marketing to Kids and Social Comparison Product Features**

77. Instagram also incorporates several unique product features that serve no functional purpose, but that do make Meta's product more appealing to children and teens (*i.e.*, "likes" and filters, as well as avatars, emojis, and games) while simultaneously increasing social comparison pressure and resulting harm (*i.e.*, "likes" and filters). Meta knows that these product features disproportionally harm teen girls and young women, yet Meta leadership—singularly focused on its economic bottom line—continued to reject product change recommendations that would have better protected users against these harms. The following is an example of product changes recommended to Meta leadership in 2018,

FBP 24/15, "IG Social Comparison Research Findings" and "Social Comparison on Instagram" (November 2018), at p. 11.

FBP 24/15 at p. 27.

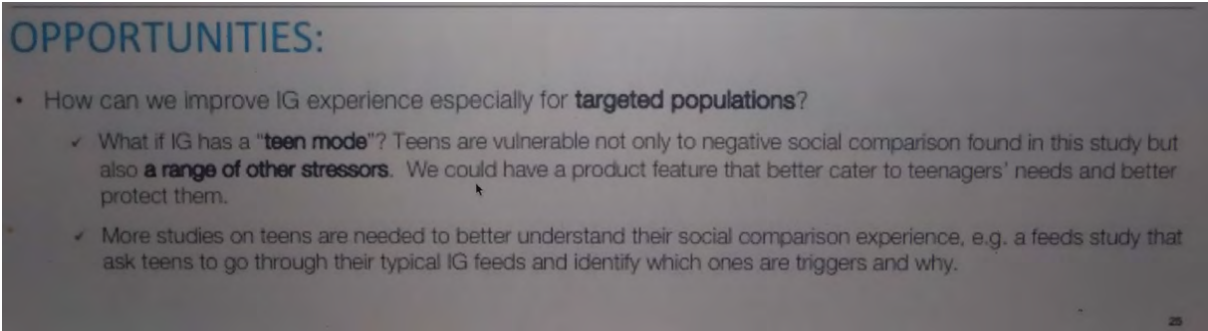

Statistical significance (p<0.05)

Interpretation: All else equal, the odds of experiencing negative social comparison on IG...

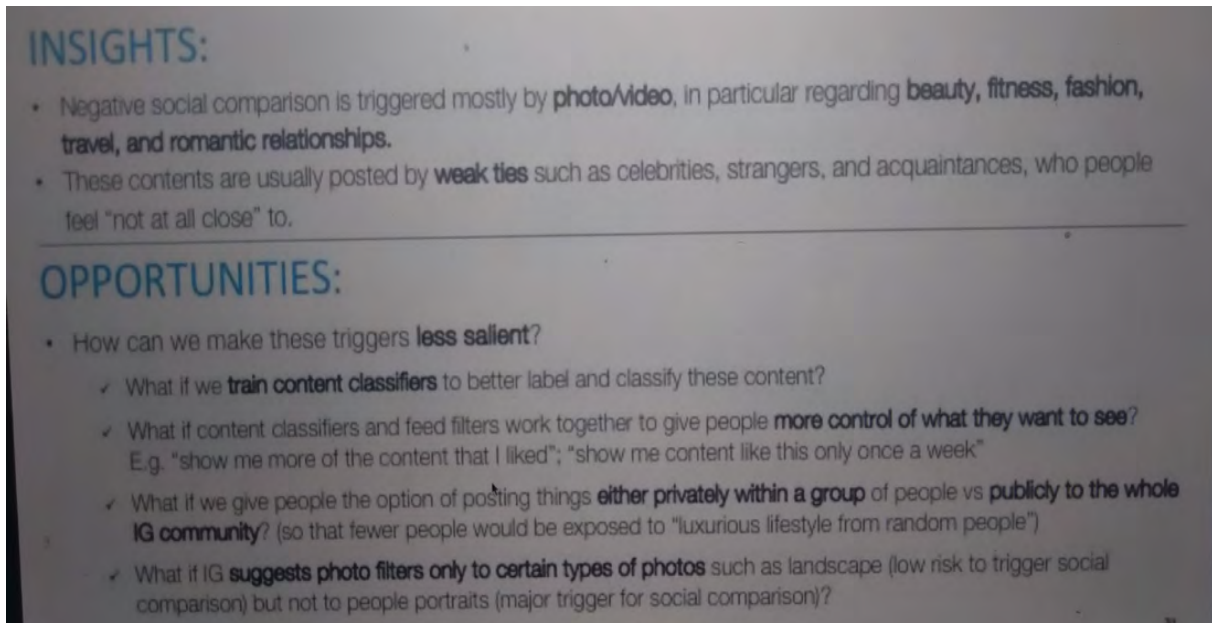

Yes	for 13-17 years old are 4.42 times larger compared to being 25+ years old
Yes	for 18-24 years old are 2.814 times larger compared to being 25+ years old
Yes	for females are 1.84 times larger compared to males
Yes	for people who have been on IG 1,000 days longer is 1.28 larger than people who don't
No	Not statistically significant
Yes	for people who have 1,000 more followers is 1.07 larger than people who don't
No	Not statistically significant
No	Not statistically significant
No	Not statistically significant

Compared to 25+ years old men, the odds for teen girls to do negative SC are 8x; for young women 5x, controlling for tenure, engagement level, no. of follow(er)s, and country.

FBP 24/15 at p. 33.

6 FBP 24/15 at p. 34.

18 FBP 24/15 at p. 46.

19

20

21

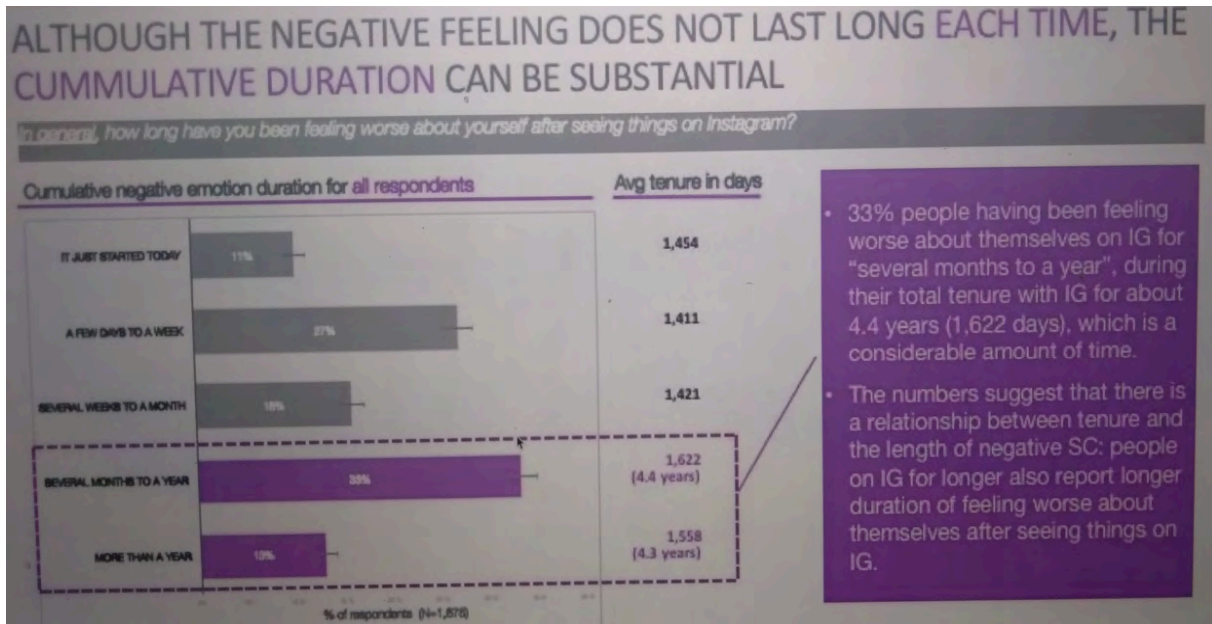

22

23

FBP 24/15 at p. 69.

FBP 24/15 at p. 79; see also FBP 45/32, "What We Know About Body Image (Literature Review)" (March 2020), at p. 1 ("Substantial evidence suggests that experiences in Instagram or Facebook make body dissatisfaction worse, particularly viewing attractive images of others, viewing filtered

1 images, posting selfies, and viewing content with certain hashtags.”). Meta knows that its products  
2 are causing harm, and that these harms disproportionately impact teen girls and young women.

3 78. Another example involves extensive testing Meta performed on its “like” button  
4 feature. Meta determined that its “like” product feature is a source of social comparison harm for  
5 many of its users. This is not surprising given that several of the Meta employees involved in  
6 creating that feature have since left Meta and have spoken publicly about the product’s addictive  
7 nature and harmfulness.<sup>9</sup> What is surprising, however, is that Meta identified the harmful feature  
8 (the “like” button) and ran experiments (called “Project Daisy”) to see whether hiding the feature  
9 completely (called, “Pure Daisy”) would reduce the harms, found that it would in fact reduce the  
10 harms and in statistically significant numbers when it came to teen users, then made the business  
11 decision to not launch Pure Daisy for fear that hiding “likes” would result in lower engagement  
12 and anger advertisers. This is a blatant example of choosing profit over human life and,  
13 specifically, the health and well-being of teens.

14 79. Upon information and belief, Project Daisy documents were provided to Meta  
15 leadership in connection with consideration of the Project Daisy launch recommendation. These  
16 included FBP 37/20 and 37/21, titled “Project Daisy Mark Review 00 Version As Presented to  
17 Mark Deck” and “Project Daisy Mark Review,” respectively.

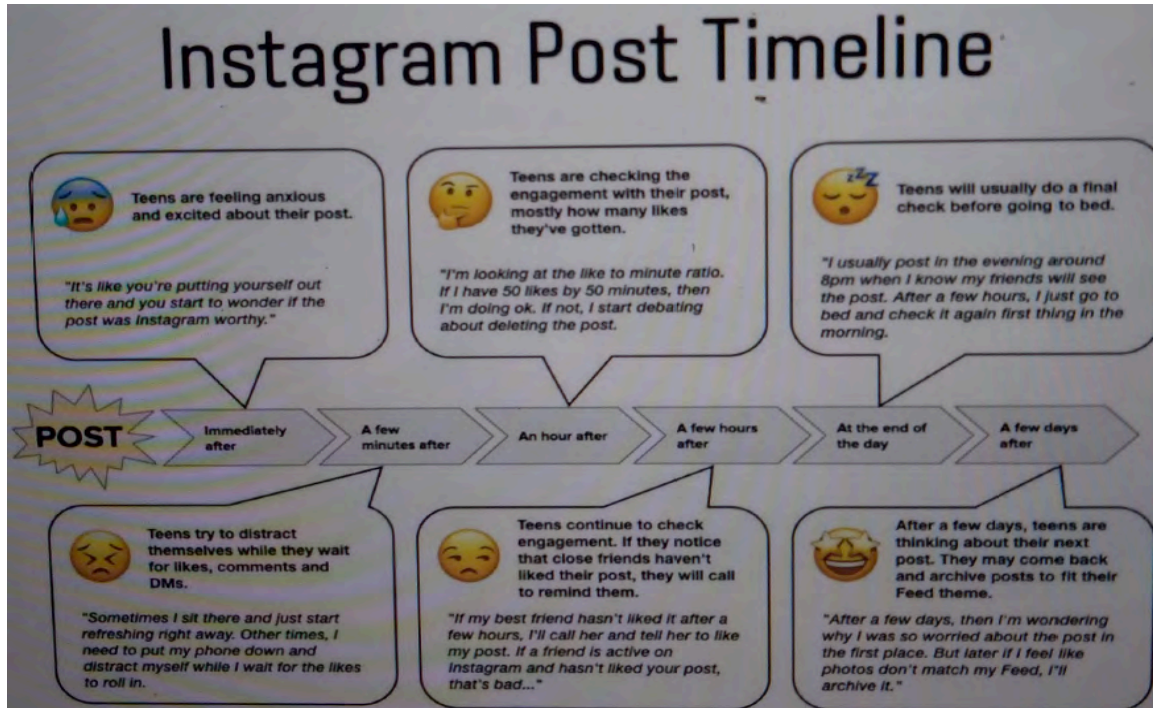

18 80. FBP 37/21, “Project Daisy Mark Review,” was published internally in May of  
19 2018, and it reports on a teen focus group, comparing the Instagram product primarily to Snap  
20 Inc.’s competing social media product. Regarding certain Instagram social comparison features,  
21 Meta identified the emotional harms these caused in teens,  
22  
23

---

<sup>9</sup> See, e.g., <https://www.theguardian.com/technology/2017/oct/05/smartphone-addiction-silicon-valley-dystopia>.

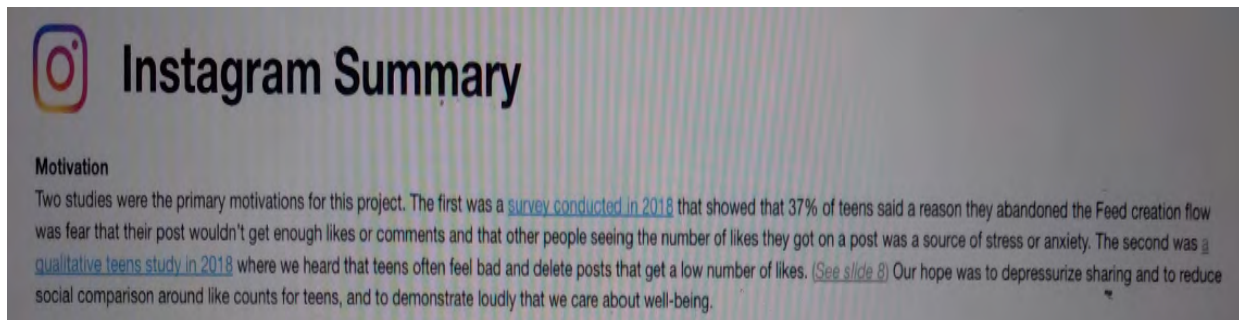

1 Likes, comments and Direct Messages are all **very** important to teens ... Teens  
 2 seem very sensitive to receiving interactions and their emotions are directly  
 correlated to the type and amount of interactions they receive.

3 FBP 37/21, at p. 7. Meta developed an Instagram Post Timeline to illustrate the point,

14 FBP 37/21, at p. 8.

15 81. This study in addition to "a qualitative teens study in 2018" (FBP 37/20, "Project  
 16 Daisy Launch Discussion" (February 6, 2020), at p. 4) led to Meta conducting extensive surveys  
 17 and studies on various user groups to determine whether making the "like" feature private only  
 18 (referred to as "Pure Daisy") could reduce the resulting social comparison harms,

FBP 37/20, at p. 4. And it did. Pure Daisy reduced harms to varying degrees, including “statistically significant differences” with respect to teen users—the use group most harmed by this feature,

		teen

\*r is a measure of effect size that ranges from 0 to 1, and can be interpreted similarly to a correlation coefficient.

Survey questions are all on 5-point scales. Stat. sig. differences between test and control are highlighted in green (positive) and red (negative), with effect sizes in yellow.

FBP 37/20, at p. 27, 29 (teen vs. non-teen results). In addition to these statistically significant results when it came to teens, Meta employees also recommended shipping Pure Daisy (that is, making likes private on all accounts) for Instagram because it was right thing to do. They wrote,

### Value We're Not Measuring

We believe there's value in shipping beyond what we've measured. We think it's important that people feel good about the time they spend on the platform, and so are encouraged that the survey suggested those who have lived with Daisy feel that removing public like counts is better for themselves and others.

### Value We're Not Measuring

We believe there's value in shipping beyond what we've measured. We think it's important that people feel good about the time they spend on the platform, and so are encouraged that the survey suggested those who have lived with Daisy feel that removing public like counts is better for themselves and others. Daisy has received overwhelmingly positive responses from policy makers, press, and academics alike.

### Recommendation

The data alone does not make a strong case for shipping, so this is a judgement call. Our recommendation is to ship on Instagram and leverage the launch as an opportunity to put a stake in the ground about what Instagram stands for, and explain that we're focused on reducing the pressure young people feel to be perfect.

FBP 37/20, at p. 4. They developed communication messaging that reiterated their recommendation for launch of Pure Daisy on the Instagram social media product,

## Comms Messaging & Tactics if IG Launches

### Messaging

- We're making like counts private for everyone on Instagram – they're not going away, just becoming private
- Teens feel a real 'pressure to be perfect' on Instagram
- We hope making like counts private will help reduce that pressure
- The Facebook app is a different experience — we're not planning to roll it out there
- People are not particularly worried about how many likes they get on Facebook
- Facebook gives you a bunch of ways to react which encourages people to share and contribute to diverse content
- And on Facebook, people tell us they are more concerned about having more control over their experience - from seeing more of their close friends, to less annoying alerts. We're cooking up new ways for you to manage your Facebook to get the most out of it.
- Control and pressure to be perfect are just two of the issues we're focused on at FACEBOOK

### Tactics

- Mark op-ed or FB post explaining the decision to ensure credit ladders up to the company
- Good Morning America appearance with Adam explaining the decision
- Fidji post or tweet to reinforce Mark's points
- Consumer-led press outreach focused on teens and gen pop - meme accounts, Ellen

## Comms: Example Headlines & Alternative Approaches

### Best case headlines:

Citing well-being concerns for teens, Zuckerberg hides likes on Instagram; stays the course on Facebook

### Worst case headlines:

Where Instagram leads, Facebook flounders  
Instagram cares about its impact on users, Facebook not so much  
Facebook likes are here to stay, despite well-being concerns

### Alternates to recommended comms approach

**ALT 1:** IG launches Daisy and proactively addresses why pressure around like counts is a bigger issue on IG vs FB (prep people for not launching on FB down the line); FB plans for announcement in following two or three months

**ALT 2:** IG launches Daisy, FB announces we're still testing; defer until 2-3 months later when FB announces we will no longer test  
(NOT RECOMMENDED)

FBP 37/20, at p. 21, 48.

82. At the same time, however, influencers and advertisers did not want “likes” hidden and Meta determined that launching Pure Daisy would have some negative impact on engagement and revenue. Accordingly, once again, Meta leadership declined to implement a product change—the recommended launch of Pure Daisy for IG—which would have reduced and, in some cases, eliminated the harms to Meta’s teen users. As explained by one Meta employee who suggested

1 less emphasis on harms to users and more emphasis on dislikes by “power users,” Meta leadership  
2 “repeatedly” makes clear that teens/influencers/creators “are such an important population for IG  
3 to keep on board and we don’t want to lose [them],”

4 [REDACTED] I think we should be  
5 commenting here that for power users  
6 they are sad in the survey to lose their  
7 likes in public. Am I misunderstanding  
8 the updated survey data? I do think  
9 acknowledging there are some folks  
10 who feel bad and it makes sense who  
11 they are helps the credibility of the work  
and presents the truth. I am repeatedly  
told they are such an important  
population for IG to keep on board and  
we don't want to lose  
teens/influencers/creators

12 FBP 37/20, at p. 5. Meta’s testing confirmed the likelihood of some negative impact,

## 13 Detail: Ads Performance

### 14 Ad Performance is driving revenue effect

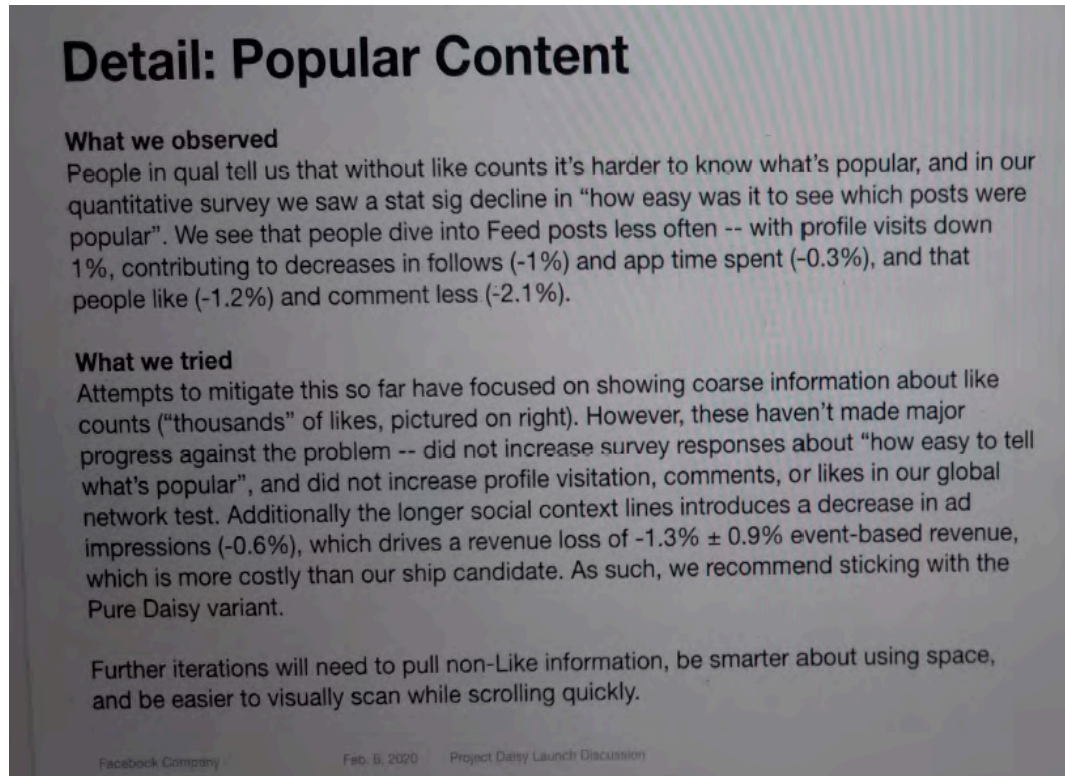

15 Like counts were a visual cue that let people know when to stop scrolling and go  
16 deep. Removing them decreases long dwells (>4s) on Ads, which decreases  
17 clicks on Ads and drives  $-1\% \pm 0.9\%$  overall event-based revenue. This effect is  
driven by  $-0.7\% \pm 0.1\%$  Feed Ad CTR. Ad Impressions are neutral. This negative  
revenue effect was factored into IG’s budget.

### 18 What we’re changing

19 Initial Daisy tests fully removed access to the liker list on Ads to avoid showing  
20 social context. Restoring a privacy-safe access to the liker list trades some ad  
click loss for some ad impression loss, which makes Feed Ads more consistent  
with organic, but is not expected to recover net revenue. See graphic on right.

### 21 Revenue follow-ups

22 We are currently conducting follow-up tests that make visual tweaks to Ad CTAs  
23 to attempt to recover this revenue, and plan to continue making changes to  
recover revenue via performance and other methods led by the Instagram Ads  
team.

FBP 37/20, at p. 45-46. Accordingly, Meta leadership declined to make this recommended product change and suggested more research instead—including to see whether they could find a way to protect users from this known harm without impacting revenue and engagement, while continuing to cause these harms in the meantime.

83. Meta's 2020 research confirmed what it knew back in 2018, if not sooner, which is that removing the visible like count would help teen users by reducing Instagram-caused social comparison harms; but also, Meta confirmed that anything short of hiding likes for everyone (Meta refers to one such hybrid approach as "Popular Daisy") would be far less effective in terms of fixing the harms Instagram was causing. Meta found that,

Social comparison is prevalent, has negative outcomes for people, and is something that people blame Instagram for. Seeing more posts with very high Like counts is associated with feeling more negative social comparison ... and this effect is consistent across different demographic groups ... There is stronger evidence for Pure Daisy reducing negative social comparison ... Pure Daisy reduced negative social comparison overall.

- Social comparison is prevalent, has negative outcomes for people, and is something that people blame Instagram for.
- Seeing more posts with very high Like counts is associated with feeling more negative social comparison and feeling less positive social comparison, and this effect is consistent across different demographic groups. Relatedly, when people were asked to recall an experience that induced negative social comparison on Instagram, they were likely to attribute that negative feeling to Like counts.
- There is stronger evidence for Pure Daisy reducing negative social comparison, and weak evidence for Popular Daisy reducing negative social comparison:
  - Pure Daisy reduced negative social comparison overall, reduced the effect of seeing posts with very high Like counts on negative social comparison, and may have also decreased the likelihood of a post being subsequently deleted.
  - Still, Popular Daisy may be helpful for teen girls, reducing negative social comparison as well as increasing positive social comparison stemming from seeing posts with high Like counts.
  - Both Pure and Popular Daisy had no significant effect on negative social comparison from seeing posts with fewer than 1K likes, so the value of hiding lower Like counts is less clear.

FBP 36/50, *Project Daisy, Likes, and Social Comparison*, “Additional research as of H2 2020” (September 2020), at p. 1.

Daisy and Social Comparison		Pure	Popular
Did Daisy reduce negative social comparison?	-	Yes -0.10 ± 0.08, $p < 0.05$	No -0.01 ± 0.08, $p = 0.76$
• Highly active teens	-	Maybe -0.18 ± 0.20, $p = 0.07$	No 0.09 ± 0.19, $p = 0.37$
• Teen girls	-	Yes -0.24 ± 0.23, $p < 0.05$	No -0.09 ± 0.23, $p = 0.43$

Daisy and Engagement			
Did Daisy decrease post deletions?	Yes (Pure)	Maybe	No
	-2.2% ± 1.8%	-1.54pp ± 1.55pp, $p = 0.05$	0.35pp ± 1.69pp, $p = 0.69$
Did Daisy decrease likes given per impression?	Yes -0.92% ± 0.16%	No 0.0 ± 0.0, $p = 0.96$	No -0.0 ± 0.0, $p = 0.17$
Did Daisy decrease comments given per impression?	Yes -0.93% ± 0.35%	No 0.0 ± 0.0, $p = 0.72$	No -0.0 ± 0.0, $p = 0.98$

1 FBP 36/50, at p. 2, 9. Once again, however, Meta chose profit over the health and well-being of  
 2 its teen users.

### 3 **Meta's Ownership and/or Licensing Rights in all User Content**

4 84. Instagram also creates images and GIFs for users to post on their videos and  
 5 pictures. Meta has also acquired publishing rights to thousands of hours of music, which it provides  
 6 to its users to attach to the videos and pictures that they post on Instagram. The GIFs, images, and  
 7 music are integral to the user's Instagram post and are, in fact, designed to encourage posting.  
 8 Indeed, in many cases, the only content in a user's Instagram post is the image, GIF, or music  
 9 supplied by Meta. When users incorporate images, GIFs, and music supplied by Meta into their  
 10 postings, Meta is functioning as a co-publisher of such content. An Instagram user who  
 11 incorporates images, GIFs, or music supplied by Meta into their post is functionally equivalent to  
 12 a novelist who incorporates illustrations into their story. Instagram can no longer characterize the  
 13 images, GIFs, and music it supplies to its users as third-party content, just as the novelist cannot  
 14 disclaim responsibility for illustrations contained in their book. Meta has made the deliberate  
 15 decision to collaborate with its users in this regard and, as evidenced by Meta's internal documents,  
 16 Meta's decision is motivated by the fact that such collaboration results in increased engagement  
 17 and more profits for Meta itself.

18 85. Meta also has legal rights in all third-party content, such that it is not "third-party  
 19 content" at all. In 2012, Meta revised its Instagram Terms of Service to the following,<sup>10</sup>

20 To help us deliver interesting paid or sponsored content or promotions, you agree that  
 21 a business or other entity may pay us to display your username, likeness, photos  
 22 (along with any associated metadata), and/or actions you take, in connection with  
 23 paid or sponsored content or promotions, without any compensation to you.

<sup>10</sup> <https://www.theverge.com/2012/12/18/3780158/instagrams-new-terms-of-service-what-they-really-mean>

1           86. Its current terms (effective January 4, 2022) are different, but still grant Meta the  
2 right to use all third-party content at Meta’s sole and unilateral discretion,

- 3           • **We do not claim ownership of your content, but you grant us a license to use it.**  
4           Nothing is changing about your rights in your content. We do not claim ownership of  
5           your content that you post on or through the Service and you are free to share your  
6           content with anyone else, wherever you want. However, we need certain legal  
7           permissions from you (known as a “license”) to provide the Service. When you  
8           share, post, or upload content that is covered by intellectual property rights (like  
9           photos or videos) on or in connection with our Service, you hereby grant to us a  
10          non-exclusive, royalty-free, transferable, sub-licensable, worldwide license to host,  
11          use, distribute, modify, run, copy, publicly perform or display, translate, and create  
12          derivative works of your content (consistent with your privacy and application  
13          settings). This license will end when your content is deleted from our systems. You  
14          can delete content individually or all at once by deleting your account. To learn more  
15          about how we use information, and how to control or delete your content, review the  
16          [Data Policy](#) and visit the [Instagram Help Center](#).

17           87. Meta directly profits from the videos and pictures its users create in collaboration  
18 with Meta, as described above.

19           88. Meta knows that it is harming teens yet, when faced with recommendations that  
20 will reduce such harms, Meta’s leadership consistently opts for prioritization of profit over the  
21 health and well-being of its teen users—that is, the millions of teen users who continue to use its  
22 inherently dangerous and defective social media product every single day.

23           89. Meta’s products are used by many millions of children every day.

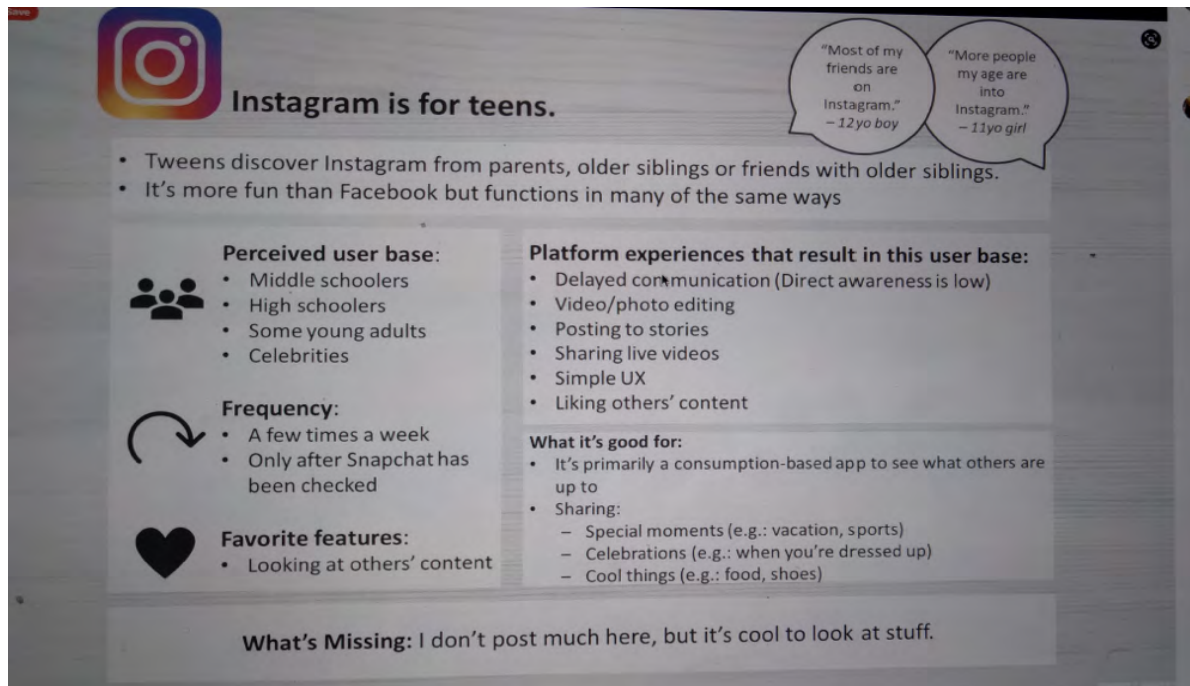

**B. Meta’s Instagram Application is a Product**

          90. There is no dispute that Instagram is a product that is designed and manufactured  
by Meta. Meta refers to its internally and in public facing documents as a “product.”

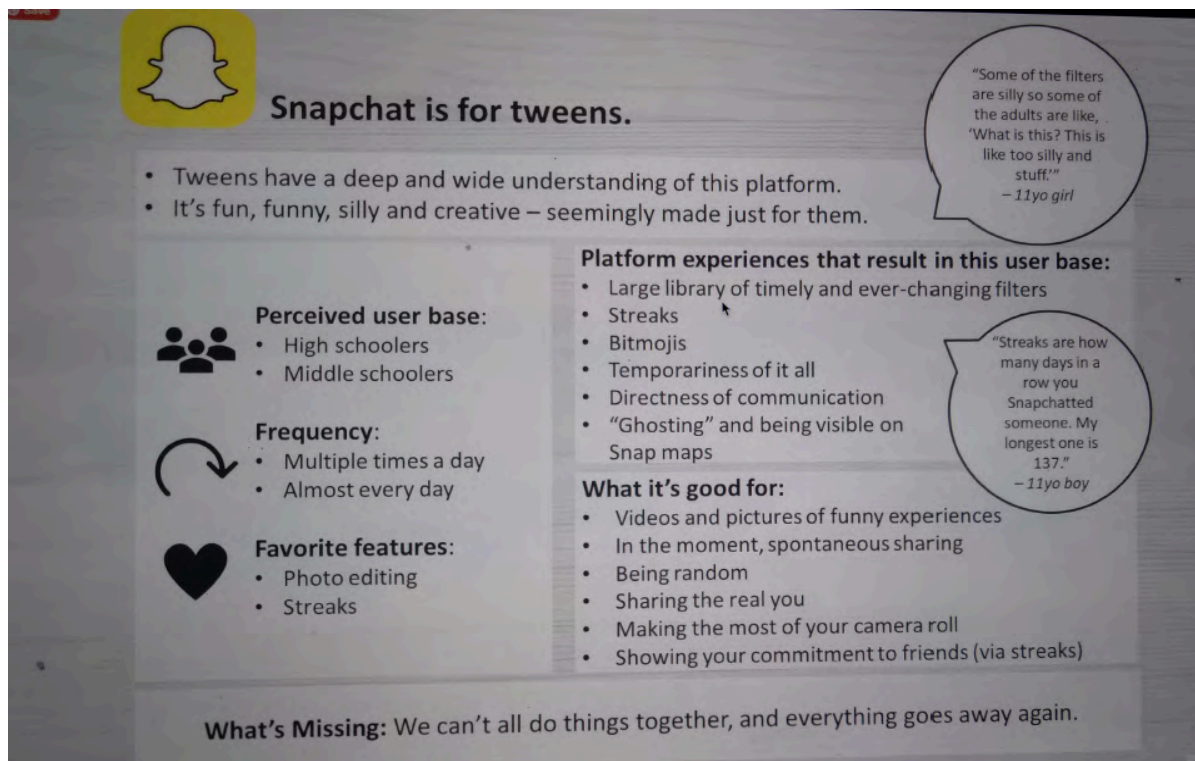

          91. This product is designed to be used by minors and is actively marketed to teens  
across the United States.

          92. Meta’s user terms and federal law prohibit use of Meta’s Instagram social media  
product by any person under the age of 13. Regardless, Meta and its primary competitors know

that children under 13 are using their products, and actively study and market to that population, as do its closest competitors,

FBP 42/03, "Tweens and Social Media" (October 9, 2017), at p. 31.

**YouTube is not seen as social media.**

- Tweens know they can comment on videos, but rarely do anything other than "like".
- Many want to post their own content but aren't allowed to.

**Perceived user base:**

- Literally everyone

**Frequency:**

- Multiple times a day
- Every day of the week

**Favorite features:**

- Watching favorite YouTubers

**Platform experiences that result in this user base:**

- Seemingly endless, constantly growing library
- Every format, genre, topic included
- The only place for short-form video
- Incredibly smart suggested videos algorithm

**What it's good for:**

- Learning about something of interest
- Laughing
- Accessing cross-network content

**What's Missing:** I don't connect with my friends here.

*"I use YouTube because YouTube's like a really fun app to go on and just look around or you can look at stuff that you want to do."*  
- 11yo boy

*"[On YouTube I find new videos by] going to the home page bucket list channels."*  
- 10yo girl

*"On YouTube I'll either watch like lifehacks or DIYs."*  
- 12yo girl

FBP 42/03 at p. 32-33.

**Musical.ly is not seen as social media.**

- Even though tweens can comment and like videos, the platform is more a creative outlet than a mode of connectivity.
- The skew is heavily female but seems to be made with tweens in mind.

**Perceived user base:**

- High school girls
- Middle school girls

**Frequency:**

- A few times a week

**Favorite features:**

- Creating and editing videos

**Platform experiences that result in this user base:**

- Current music
- Youthful editing options
- Rooted in performing

**What it's good for:**

- Discovering new music
- Creating videos
- Scrolling through favorite Musers' posts
- Being creative, silly

**What's Missing:** I don't connect with my friends here.

*"I got Musical.ly when I was 11."*  
- 12yo girl

*"[On Musical.ly] you can post silly videos."*  
- 11yo girl

1 FBP 42/03 at p. 34.

2 93. The Instagram product is designed to be used by minors and is actively marketed  
3 to minors across the United States. Meta markets to minors through its own marketing efforts and  
4 design. In addition, Meta works with and actively encourage advertisers to create ads targeted at  
5 and appealing to teens, and even to children under the age of 13. Meta spends millions of dollars  
6 researching, analyzing, and experimenting with young children to find ways to make its product  
7 more appealing and addictive to these age groups, as these age groups are seen as the key to Meta's  
8 long-term profitability and market dominance.

9 94. Meta also is aware that large numbers of children under the age of 18 use its product  
10 without parental consent. Indeed, Meta designs its social media product in a manner intended to  
11 allow and not prevent such use.

12 95. Meta is likewise aware that large numbers of children under the age of 13 use its  
13 product despite user terms or "community standards" that purport to restrict use to individuals who  
14 are 13 and older. They have designed their product in a manner that allows and/or does not prevent  
15 such use to increase user engagement and, thereby, increase its own profits.

16 **C. Meta Knows That Its Facebook and Instagram Products are Highly Addictive**

17 96. Meta and its leadership have repeatedly represented to the public and governments  
18 around the world that their Instagram and Facebook products are safe and not addictive.

19 97. In September of 2017, Meta CEO Mark Zuckerberg spoke out on the issue of opioid  
20 addiction, making general addiction-related statements, including that "Communities all across the  
21 country have a long road ahead, but as someone told me at the end, 'I'm hopeful because we're  
22 talking about it.' Me too."<sup>11</sup>

23  

---

<sup>11</sup> <https://www.northpointrecovery.com/blog/mark-zuckerberg-discusses-view-addiction-facebook/>

1           98. In April of 2018, Meta CEO Mark Zuckerberg testified under oath to Congress that  
2 Meta does not design its products to be addictive and that he is not concerned with social media  
3 addiction as it relates to teens. He stated,

4           I view our responsibility as not just building services that people like but as building  
5 services that are good for people and good for society as well ... we study a lot of  
6 effects of well-being, of our tools, and broader technology, and like any tool there  
7 are good and bad uses of it. What we find in general is that if you are using social  
8 media to build relationships then that is associated with all the long term measures  
of well-being that you'd intuitively think of ... but if you are using the internet and  
social media to just passively consume content and are not engaging with other  
people then it doesn't have those positive effects and it could be negative.<sup>12</sup>

9           99. In November of 2020, Meta CEO Mark Zuckerberg again testified under oath to  
10 Congress that Meta does not design its products to be addictive and that research on addictiveness  
11 of social media has not been conclusive.<sup>13</sup>

12           100. In March of 2021, Meta CEO Mark Zuckerberg testified under oath to Congress  
13 that Instagram is not addictive and that it does not cause harm to children and teens.

14           He was asked:

15           “So Mr. Zuckerberg, yes or no: Do you agree too much time in front of screens,  
passively consuming content, is harmful to children's mental health? ...”

16           He responded:

17           “I don't think that the research is conclusive on that...”

18           He was asked:

19           “Do you agree that you make money off of creating an addiction to your platforms?”

20           He responded:

21           “Congressman, no. I don't agree with that.”

22           He was asked:

23           “Do you believe that your platform harms children?”

          He responded:

---

<sup>12</sup> <https://www.youtube.com/watch?v=AB4mB-K7-xY>

<sup>13</sup> <https://www.tampafp.com/great-news-facebook-is-not-designed-to-be-addictive-according-to-zuckerberg/>

1 “Congresswoman, I don’t believe so. This is something that we study and we  
2 care a lot about; designing products that peoples’ well-being is very important  
3 to us. And what our products do is help people stay connected to people they  
4 care about, which I think is one of the most fundamental and important human  
5 things that we do, whether that is for teens or for people who are older than that.  
6 And again, our policies on the main apps that we offer generally prohibit people  
7 under the age of 13 from using the services.”<sup>14</sup>

8 101. On September 30, 2021, Meta’s Head of Safety, Antigone Davis, testified under  
9 oath to Congress that Instagram is not addictive. She testified that she “disagree[d] with calling  
10 our product addictive. I also think that’s not how we build products.”<sup>15</sup> She denied Meta’s  
11 marketing to children under 13, repeatedly denied the existence of causal research regarding harms  
12 to teens from Instagram use and testified that Meta’s overreaching goal is child safety: “We work  
13 tirelessly to put in place the right policies, products, and precautions so [young users] have a safe  
14 and positive experience.”<sup>16</sup>

15 102. On December 8, 2021, Instagram’s president Adam Mosseri provided written  
16 testimony and testified under oath to Congress that Instagram is not addictive.<sup>17</sup> He testified that  
17 teens come to Instagram while dealing with difficult things and that Instagram makes things better  
18 for them. Mr. Mosseri downplayed the significance of the documents disclosed by the Facebook  
19 Whistleblower, characterizing Meta’s numerous studies as involving input from small numbers of  
20 teens and not measuring “causal relationships between Instagram and real-world issues.”<sup>18</sup> Indeed,

21 <sup>14</sup> <https://www.congress.gov/117/meeting/house/111407/documents/HHRG-117-IF16-Transcript-20210325.pdf>, at  
22 p. 67, 107, 175.

23 <sup>15</sup> <https://www.rev.com/blog/transcripts/facebook-head-of-safety-testimony-on-mental-health-effects-full-senate-hearing-transcript> (“Sept. 30, 2021, Senate Hearing Transcript”), at 2:06:35; *see also id.* at 02:07:44 and 02:07:59 (Ms. Davis also denied that Meta’s business model includes getting users engaged for longer amounts of time).

<sup>16</sup> *Id.* at 24:58, 01:47:29, 1:48:07, 1:48:20, 2:10:47, 33:46, and 40:41.

<sup>17</sup> <https://www.commerce.senate.gov/2021/12/protecting-kids-online-instagram-and-reforms-for-young-users>,  
recording of December 8, 2021 Senate Hearing.

<sup>18</sup> <https://www.commerce.senate.gov/services/files/3FC55DF6-102F-4571-B6B4-01D2D2C6F0D0>, written  
Testimony of Adam Mosseri, Head of Instagram, dated December 8, 2021.

1 he testified that Meta’s overarching goal is child safety: “But I want to assure you that we do have  
2 the same goal. We want all teens to be safe online.”<sup>19</sup>

3 103. In truth, Meta has been studying its “addicting” product mechanics for years, and  
4 Meta leadership—including and specifically Meta CEO Mark Zuckerberg—has actual knowledge  
5 that these products are addictive and harmful to children and teens. Moreover, Meta’s own  
6 estimates and findings reflect known addiction by a significant number of children and teens. For  
7 example, if we assume an addiction rate among US teen users only of 3%—which is *far lower*  
8 than Meta’s findings—that means that more than *half a million* American teenagers (age 13 to 17)  
9 are currently addicted to Instagram to the point where their addiction is causing sleep deprivation,  
10 actively interfering in their friendships, family relationships, employment, and education, and is  
11 causing other physical and emotional harms. That said, Meta’s numbers put addiction and product-  
12 related harms for teens anywhere between 7% and 33% or higher, depending on the demographic  
13 and harm at issue. This equates to many millions of US teens harmed by Meta’s Instagram social  
14 media product, while Meta makes hundreds of billions of dollars in revenue as a result.

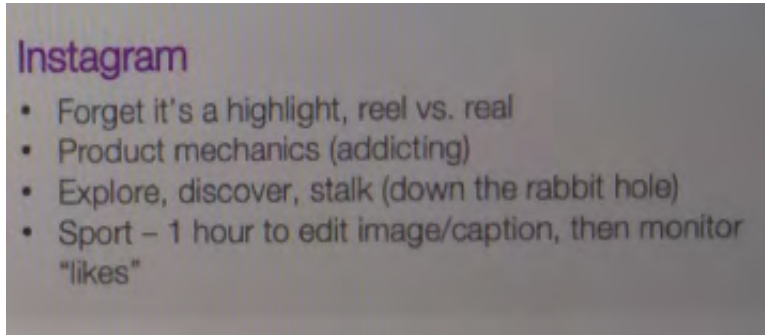

15 104. In March of 2020, Meta published an internal PowerPoint titled “Social  
16 Comparison Exploratory Research,” based on a US Exploratory Study it conducted titled “Teen  
17 Girls Body Image and Social Comparison on Instagram,”

18 **Teen Girls Body Image and Social Comparison on Instagram - An**  
19 **Exploratory Study in the US**  
20 We conducted focus groups and diary study in the US to better understand teen girls'  
21 experience with appearance comparison on social media and how this impacted their body  
22 image and overall mental health.

23 <sup>19</sup> <https://www.npr.org/2021/12/08/1062576576/instagrams-ceo-adam-mosseri-hears-senators-brush-aside-his-promises-to-self-poli>

1 FBP 24/13, “Teen Girls Body Image and Social Comparison on Instagram – An Exploratory Study  
2 in the US,” at p. 1.

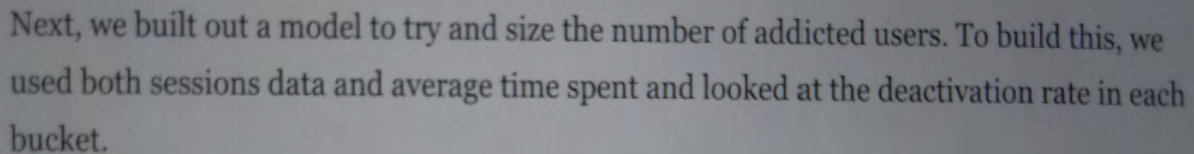

3 105. In that PowerPoint, Meta refers to its Instagram product mechanics as “addicting,”

9 FBP 24/13 at p. 37. The addictiveness of Meta’s products and user addiction has been a theme in  
10 Meta documents for years. The following are just a few more examples from the Facebook Papers.

11 106. In 2017, a Meta intern investigated whether it had “made people addicted to  
12 Facebook,” and his answer was an unequivocal yes,

13

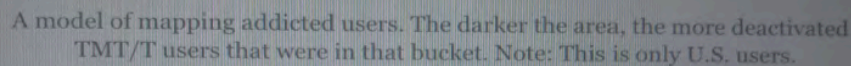

14 Next, we built out a model to try and size the number of addicted users. To build this, we

15 used both sessions data and average time spent and looked at the deactivation rate in each

16 bucket.

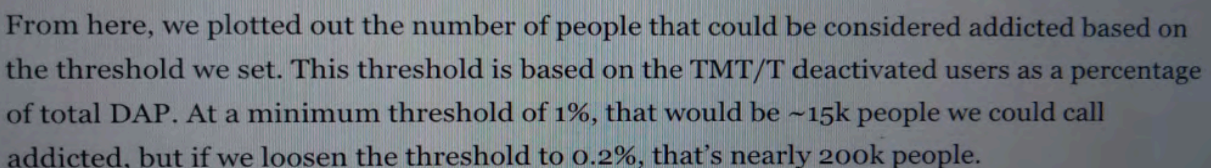

17

18 A model of mapping addicted users. The darker the area, the more deactivated

19 TMT/T users that were in that bucket. Note: This is only U.S. users.

20

21 From here, we plotted out the number of people that could be considered addicted based on

22 the threshold we set. This threshold is based on the TMT/T deactivated users as a percentage

23 of total DAP. At a minimum threshold of 1%, that would be ~15k people we could call

addicted, but if we loosen the threshold to 0.2%, that's nearly 200k people.

1 FBP 16/08, “Have we made people addicted to Facebook?” (August 3, 2017), at p. 13, 15. Once  
2 again, recommendations were provided to Meta leadership, and those recommendations were  
3 ignored,

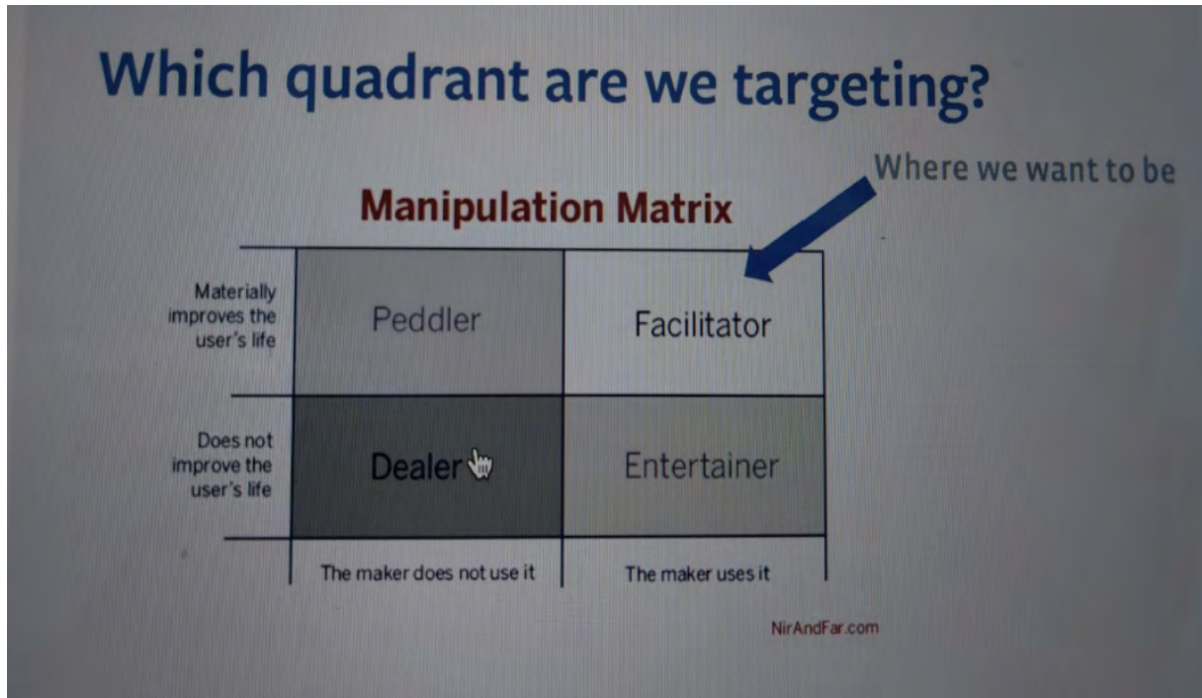

4  
5 In order to help these users, we can create new tools that don’t stop them from using  
6 Facebook, but help them feel more in control of when they choose to visit the app. To this  
7 end, we could leverage the easy to navigate structure of the Take a Break tool by the Protect  
8 and Care team. The tool, designed for breakups, makes it easy for someone to adjust their  
9 settings to see less of a person in their feed, photos, or messages. Rather than digging  
10 through the settings tab, this tool makes it easier to find the relevant settings a person may  
want to change.

11 FBP 16/08 at p. 18.

12  
13 ... and probably change some of our growth  
14 “hacks”  
15 “What shared responsibilities do we so-called growth hackers ... have  
16 to our users, to our future generations, and to ourselves?”

17 Now this is not to say that we should never notify users. But, if people are addicted to our  
18 products, we do have an obligation to help them. Rather than inundating users with excessive  
19 notifications, we should focus on creating experiences that users to willingly want to come  
20 back. As we work towards creating meaningful connections on Facebook, **we should focus**  
21 **more on quality time spent than just time spent.**

FBP 16/08 at p. 22-24. Responding Meta employees thanked the intern for his work and made sure to clarify that Meta does not like to use the word “addiction” when referring to its products. FBP 16/08 at p. 27 (“for posterity, i’ll add here that we had some good conversations as to whether we could actually label these people ‘addicted’ which is a pretty specific term. for instance, the survey items you used were the most tame ones from an existing scale so may not really be picking up on ‘addicting’ but likely picking up on patterns of use that we wouldn’t want to be encouraging.”). The general response from management was then that Meta would need to investigate further, with the intern suggesting use of the word “twitchy” instead of “addicted.” *Id.* (“One good adjective I’ve been thinking about is ‘twitchy’ since it seems that these users just feel jumpy and keep coming into the app.”).

107. By 2019, Meta researchers and employees were more careful about putting terms like “addiction” in quotes but, regardless, they continued to reach the same conclusions as the many studies that came before, including studies specific to the issue of teen users and mental

health,

## Teens want help controlling the time they spend on the app

- Teens talk about the amount of time they spend on Instagram as one of the “worst” aspects of their relationship to the app.
- They have an addicts’ narrative about their use -- it can make them feel good, feel bad. They wish they could spend less time caring about it, but they can’t help themselves.
- Teens recognize the amount of time they spend online isn’t good for them but at the same time know they lack the willpower to control the time spent themselves

Time spent tools

FBP 23/01, “Teen Mental Health Deep Dive” (October 10, 2019), at p. 79.

108. Meta employee reporting on underlying data—which Plaintiffs do not yet have—describes addiction in every sense of the word,

We actually heard a lot about this! In the focus groups teens told us that they do not like the amount of time they spend on the app but feel like they have to be present. They often feel “addicted” and know that what they’re seeing is bad for their mental health but feel unable to stop themselves ... In the survey, about 30% (and even larger proportions of those who are unsatisfied with their lives) said that the amount of time they spend on social media makes them feel worse. About half of teens in both markets want Instagram to encourage them to take a break or to get off the app.”

FBP 23/01 at p. 103.

██████████ We actually heard a lot about this! In the focus groups teens told us that they don't like the amount of time they spend on the app but feel like they have to be present. They often feel "addicted" and know that what they're seeing is bad for their mental health but feel unable to stop themselves. This makes them not feel like they get a break or can't switch off social media.

In the survey, about 30% (and even larger proportions of those who are unsatisfied with their lives) said that the amount of time they spend on social media makes them feel worse. About half of teens in both markets want Instagram to encourage them to take a break or to get off the app (see slide 48).

See also FBP 23/01 at p. 105,

The other big reason that parents aren't a source of support has to do with parents' ability (or really, their inability) to understand what adolescence in the age of social media looks and feels like. The parents of today's teens came of age before social media, so they don't know and \*can't\* know what it's like to live in what feels like a constant spotlight. When today's parents were teens, social comparison was much more limited both in terms of scope and scale. Teens today compare themselves to many more people, much more often, and about more parts of life than their parents did during their adolescence. In addition, today's parents were able to turn it off when they went home, while teens feel compelled to be on social media all the time.

109. Then there's Meta's detailed findings published internally in January 2020,

## Behaviors

After feature selection and removing behavioral and too-general features, we arrived at these top 5 behaviors for our heuristic metric:

- **No-engagement late night sessions:** number of sessions between 9pm and 3am with no likes, posts, comments, etc. (no content produced), over a 7-day period.
- **No-engagement sessions within 10 minutes of last:** number of sessions within 10 minutes of a previous session, with no engagement (likes, posts, comments, etc), over a 7-day period.
- **Average late night product switches:** average number of times a person switches between surfaces on FB App during a session occurring between 9pm and 3am, over a 7-day period.
- **Total 15-sec sessions:** total number of sessions lasting 15 seconds or less in a day.
- **Jewel Mark As Seen:** number of notifications marked as seen, over a 7-day period.

The proposed heuristic is a logistic regression that uses these 5 features to predict whether a survey respondent experiences problematic use. See below for the predictive power of the heuristic as compared to a model that uses all the features.

FBP 16/11, "A Behavioral Heuristic of Problematic Use" (January 6, 2020), at p. 4.

1 [REDACTED] think the philosophical question can be put this way: we want to avoid making our products  
2 addictive and have people addicted to them, we are not trying to cure addiction.

3 Like · Reply · 1y

4 [REDACTED] this make sense, I'm just worried that there are worse options than mindlessly surfing f  
5 there.

6 Like · Reply · 1y

7 [REDACTED] I know, but just addicting them to FB is not the solution. By the way, please accept my  
8 Farmville invitation, I have cows for sale!

9 Like · Reply · 1y

10 FBP 16/11 at p. 13.

11 110. And Meta's internal findings published in March of 2020, and countless other times  
12 over the last several years,

13 In Q4 2019, our Well-being Product Team conducted global qualitative research to better  
14 understand "problematic" use (sometimes called "social media addiction" externally),  
15 specifically:

- 16 • **The current PU experience:** What are people's current issues related to  
17 excessive/problematic FB use? What is journey of problematic use? (Triggers, Attitudes,  
18 Impacts, Remediation Tactics)
- 19 • **PU personas:** Who is experiencing problematic Facebook use?
- 20 • **Opportunity mapping:** What solutions could we develop to mitigate PU? Gathered  
21 feedback on PU-related concepts.

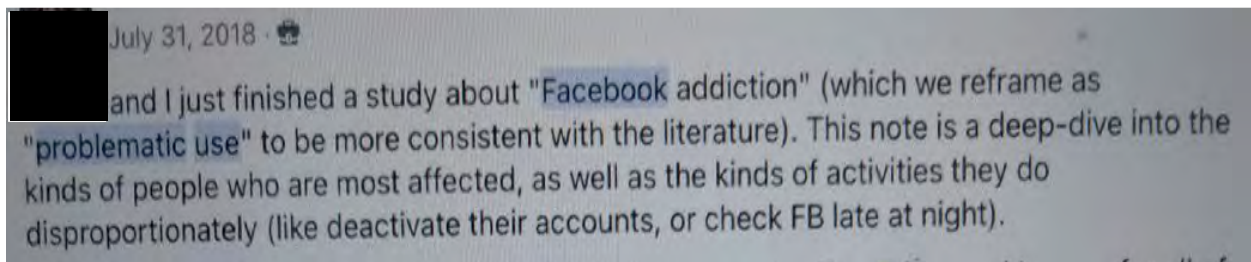

#### 22 TL;DR

- 23 • **Over 10 triggers contribute to the potential for problematic use (PU) but only 3 user  
attitudes associated with PU:** Lack of guilt, low self- control, and high pressure for giving  
timely replies.
- **We removed 2 PU impact areas and added 2 more.** This research uncovered 2 new PU  
impact areas, Safety Risks and Regretful Spending, to add to Productivity, Sleep,  
Relationships, and Parenting. Fear of Missing Out (FOMO) and Loss of Control Over Time  
Spent (LCOTS) are not impacts. FOMO is one of the 10 triggers. LCOTS is PU, not a  
trigger nor an impact.
- **Most selected Productivity as their top PU priority area for FB to pursue.** A loss of  
productivity (delayed work/chores, being late to appointments) affects sleep and  
relationships. Sleep and Parenting were the next most voted areas.
- **6 of 13 concepts were highly rated for reducing PU across multiple impact areas.** Two  
concepts (Time-to-Complete, You're All Caught Up) posed a risk of exacerbating PU for  
those with FOMO. Highly rated concepts provided situational awareness, sense of control,  
customization, transparency and a sense of completion.

FBP 19/17, "Problematic User of Facebook: User Journey, Personas & Opportunity Mapping"  
(March 9, 2020), at p. 1.

FBP 19/17 at p. 11.

## Age, gender, and major life events

Problematic use is highest among teens and people in their 20s, consistent with previous findings that younger people generally have more problems with self-regulation. This is also consistent with [REDACTED] research on time control.

Problematic use is highest among teens and people in their 20s.

FBP 16/07, “Problematic Facebook use: When people feel like Facebook negatively affects their life” (July 31, 2018), at p. 1, 9.

- **Profile hopping:** People reporting problematic use spend a greater proportion of their time hopping between profiles. Is it to find more content because they've run out of novel inventory in their News Feeds, social comparison (wanting to see how they “measure up” to other people), or something else?

- **Teens and FOMO:** FOMO was highest among teens. Are there special considerations for teens to ensure that FOMO doesn't lead to problems with sleep, relationships, or school?

- **Correlation vs. causation:** These results are all correlational; we need more research to unpack the causal direction. For example, people with problematic use spend a greater proportion of their time online late at night. Are they bored? Lonely? They report that Facebook causes problems with sleep; does lack of sleep further add to feelings of stress or pressure to keep up during the day?

FBP 16/07 at p. 35-36.

- 1 **1. Higher Facebook use is correlated with worse psychological states**  
 2 (wellbeing, loneliness, etc.), although *changes* in Facebook use are uncorrelated with  
 3 changes in wellbeing measures. [8,5]
- 4 **2. An experiment found that a 1-month break from Facebook improved self-**  
 5 **reported wellbeing.** [6]
- 6 **3. A large fraction of users struggle with their Facebook/Instagram use.** Among  
 7 US teens “84% had taken a break from social media, and 74% have taken a break from  
 8 Instagram.” [2] “More than a third of the survey respondents feel they have spent more  
 9 time than they would have liked on Instagram. About one in five respondents think they  
 10 have a problem controlling their time.” [5]
- 11 **4. A significant minority report serious difficulties.** 3.1% of Facebook users in the  
 12 U.S. report “serious problems with sleep, work, or relationships that they attribute to  
 13 Facebook AND concerns or preoccupations about how they use Facebook.” [1]

14 FBP 08/25, “When User-Engagement  $\neq$  User-Value” (December 10, 2020), at p. 7. In response to  
 15 these findings, one Meta employee aptly responded,

16 A lot of (3) sounds like addiction. Addiction (as I was taught!) is characterized by  
 17 a disassociation between “liking” and “wanting.” The addict self-reports that they  
 18 do drugs because they like it, but generally it can be revealed that addicts don’t like  
 19 the drug as much as they used to, before they were addicted. However they want it  
 20 more, and compulsively seek it, despite suffering harm ... Addiction is challenging  
 21 to define, and usually refers to behavior that persists despite adverse consequences.  
 22 **It seems clear from what’s presented here that some of our users are addicted**  
 23 **to our products. And I worry that that driving sessions incentivizes us to make**  
**our product more addictive, without providing much more value. How to keep**  
**someone returning over and over to the same behavior each day? Intermittent**  
**rewards are most effective (think slot machines), reinforcing behaviors that**  
**become especially hard to extinguish** – even when they provide little reward, or  
 cease providing reward at all.

1 [REDACTED] A lot of (3) sounds like addiction. Addiction (as I was taught!) is characterized by a dissociation between  
2 "liking" and "wanting." The addict self-reports that they do drugs because they like it, but generally it can be revealed that  
3 addicts don't like the drug as much as they used to, before they were addicted. However they want it more, and  
compulsively seek it, despite suffering harm. Mapping to [REDACTED] thinking here, wanting can be proxied by engagement, but  
liking is more like the value we're after. These dissociate all the time, and it can happen to anyone.

4 Addiction is challenging to define, and usually refers to behavior that persists despite adverse consequences. It seems  
5 clear from what's presented here that some of our users are addicted to our products. And I worry that driving sessions  
incentivizes us to make our product more addictive, without providing much more value. How to keep someone returning  
6 over and over to the same behavior each day? Intermittent rewards are most effective (think slot machines), reinforcing  
behaviors that become especially hard to extinguish -- even when they provide little reward, or cease providing reward at  
all.

7 FBP 08/25 at p. 14 (emphasis added).

8 111. In short, Meta employees and Meta leadership know that Facebook and Instagram  
9 are addictive and harmful, in part, because it was designed that way (addictive design) and, also,  
10 because the billions of dollars Meta has spent researching user addiction has said so. Meta has  
11 never released this information on addiction and/or problematic use to the public; instead, its  
12 leadership lied repeatedly to Congress and the parents of its tens of millions of child and teen users.

13 112. Meta advertises its product as "free," because they do not charge its users for  
14 downloading or using its product. What many users do not know is that, in fact, Meta makes a  
15 profit by finding unique and increasingly dangerous ways to capture user attention and target  
16 advertisements to its users. Meta receives revenue from advertisers who pay a premium to target  
17 advertisements to specific demographic groups of users in the applications including, and  
18 specifically, users under the age of 18. Meta also receives revenue from selling its users' data to  
19 third parties.

20 113. The amount of revenue Meta receives is based upon the amount of time and user  
21 engagement on its platforms, which directly correlates with the number of advertisements that can  
22 be shown to each user. In short, Meta opted for user engagement over the truth and user safety.

23 114. Instagram is built around a series of design features that do not add to the

1 communication and communication utility of the application, but instead seek to exploit users'  
2 susceptibility to persuasive design and unlimited accumulation of unpredictable and uncertain  
3 rewards (including things like “likes” and “followers” and “views” in Stories). This design is  
4 unreasonably dangerous to the mental well-being of underage users’ developing minds.

5 115. Meta has also employed thousands of engineers to help make its products  
6 maximally addicting. One example is Instagram’s “pull to refresh” feature, which is based on how  
7 slot machines operate. It creates an endless feed, designed to manipulate brain chemistry, and  
8 prevent natural end points that would otherwise encourage users to move on to other activities.

9 116. Meta knows that its product is addictive, and it knows that millions of teen users  
10 want to stop using Instagram but cannot.

11 117. Meta does not warn users of the addictive design of its product. On the contrary,  
12 Meta actively conceals the dangerous and addictive nature of its product, lulling users and parents  
13 into a false sense of security. This includes consistently playing down its products’ negative effects  
14 on teens in public statements and advertising, making false or materially misleading statements  
15 concerning product safety, and refusing to make its research public or available to academics or  
16 lawmakers who have asked for it.

17 118. For example, in or around July 2018, Meta told BBC News that “at no stage does  
18 wanting something to be addictive factor into” its product design process. Similarly, Meta told  
19 U.S. Senators in November of 2020 that “We certainly do not want our products to be addictive.”  
20 Yet, Meta product managers and designers attended and even presented at an annual conference  
21 held in Silicon Valley called the Habit Summit, which started in 2014 and ran until recently, and  
22 the primary purpose of the Summit was to learn how to make products more habit forming.

23 119. Meta’s Terms of Use also state that Meta is “Fostering a positive, inclusive, and

1 safe environment,” and represent that Meta uses its “teams and systems ... to combat abuse and  
2 violations of our Terms and policies, as well as harmful and deceptive behavior. We use all the  
3 information we have—including our information—to try to keep our platform secure.” Yet, as  
4 seen in FBP 09/15 (“Exposure to integrity harms is a worse experience than ‘Over-enforcement’”  
5 (March 31, 2020), at p. 2), and elsewhere, this is not the truth. Meta *does* have the technology  
6 needed to protect its users, but only employs that technology when and to the extent it can do so  
7 without decreasing user engagement and its own profits (or unless a “press fire” forces them to  
8 act).

9 120. Meta also engineers its product to keep users, and particularly young users, engaged  
10 longer and coming back for more. This is referred to as “engineered addiction,” and examples  
11 include features like bottomless scrolling, tagging, notifications, and live stories.

12 121. Meta spends billions of dollars marketing its products to minors, and has  
13 deliberately traded in user harm for the sake of its already astronomical revenue stream.

14 **D. Meta Has Designed Complex Algorithms to Addict Teen Users and Its Business**  
15 **Model is Based on Maximizing User Screen Time**

16 122. Meta has intentionally designed its product to maximize users’ screen time, using  
17 complex algorithms designed to exploit human psychology and driven by the most advanced  
18 computer algorithms and artificial intelligence available to the largest technology companies in  
19 the world.

20 123. Meta has designed and progressively modified its product to promote problematic  
21 and excessive use that they know is indicative of addictive and self-destructive use. More  
22 specifically, Meta knows that many teens feel as though they cannot stop their use of Meta’s  
23 product, even though they want to stop. *See*, Section B, *supra*.

124. One of these features, present in Instagram, is the use of complex algorithms to select and promote content that is provided to users in an unlimited and never ending “feed.” Meta is well-aware that algorithm-controlled feeds promote unlimited “scrolling”—a type of use those studies have identified as detrimental to users’ mental health. However, this type of use allows Meta to display more advertisements and obtain more revenue.

125. Meta has also designed algorithm-controlled feeds to promote content most likely to increase user engagement, which often means content that Meta knows to be harmful to its users. This is content that users might otherwise never see but for Meta’s affirmative pushing of such content to their accounts, a fact often acknowledged by Meta’s employees in Meta research reports and internal message boards,

We have age limits and suggestive filters, but obviously those are only so effective and not countering this phenomenon, which I do believe we are at least partially responsible for. But the more interesting thing I took from this is that our systems seem to encourage a desire for popularity.

FBP 25/22, “IG Reels Ranking Working Group” (September 17, 2020), at p. 1.

they are using Facebook. For instance, whenever we rank feed we affect what people see and the social interactions that they have. And those experiences impact what they do offline and society as a whole. If we're both (at least partly) right, then decisions based on this POV are likely poor.

view. But I don't think it's all about data. A lot of the arguments are deductive rather than inductive: e.g. we act on all posts in the course of feed ranking, which makes us (at least partly) responsible for their impacts. We also have data that FB is making lots of money with its current approach, which might press us not to worry. So I think there has to be some uptake from leadership to really care about understanding and getting the principles right.

The feed controlling a big portion of the user experience is an interesting point. The feed needs to maximize utility. I suspect that the problem is that we're learning that maximizing user utility (a positive obligation) of the feed may actually have negative impacts at the macro level. How to weigh that into the utility function is a hard question.

FBP 47/26, "On disagreeing about Facebook's obligations" (December 23, 2020), at p. 16-18.

126. In the words of another, high-level departing Meta employee,

1 In September 2006, Facebook launched News Feed. In October 2009, Facebook switched  
2 from chronological sorting to an algorithmic ranking. 10 years later, in July 2019, Sen. Josh  
3 Hawley introduced a bill to the US Senate that would ban features in app feeds, such as  
4 infinite scroll.

5 The response in 2006 was largely positive; the response in 2009 was negative from a vocal  
6 minority, but still largely positive; the response in 2019 was largely “lol, wut?” If I had to  
7 guess, the response to government regulation around engagement centric information feeds  
8 in 2026 will be “Omg finally”.

8 FBP 47/27, “Why We Build Feeds” (October 4, 2019), at p. 1.

9 127. The addictive nature of Meta’s product and the complex and psychologically  
10 manipulative design of its algorithms is unknown to ordinary users.

11 128. Meta goes to significant lengths to prevent transparency, including posing as a  
12 “free” social media platform, burying advertisements in personalized content, and making  
13 knowingly false public statements about the safety of its product.

14 129. Meta also has developed unique product features that are designed to limit, and that  
15 do limit, parents’ ability to monitor and prevent problematic use by their children.

16 130. Meta’s addiction-driven algorithms are designed to be content neutral. They adapt  
17 to the social media activity of individual users to promote *whatever* content will trigger a particular  
18 user’s interest and maximize their screen time. That is, prior to the point when Meta has addicted  
19 its user and is then able to influence user preferences, its algorithm designs do not distinguish,  
20 rank, discriminate, or prioritize between types of content. For example, if the algorithm can  
21 increase User One engagement with elephants and User Two engagement with moonbeams, then  
22 Meta’s algorithm design will promote elephant content to User One and moonbeam content to  
23 User Two. Meta’s above-described algorithms are solely quantitative devices and make no

1 qualitative distinctions between the nature and type of content they promote to users—as long as  
2 those promotions increase user engagement.

3 **E. Minor Users’ Incomplete Brain Development Renders Them Particularly Susceptible**  
4 **to Manipulative Algorithms with Diminished Capacity to Eschew Self-Destructive**  
5 **Behaviors and Less Resiliency to Overcome Negative Social Media Influences**

6 131. The human brain is still developing during adolescence in ways consistent with  
7 adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet  
8 fully developed in regions related to risk evaluation, emotional regulation, and impulse control.

9 132. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an  
10 essential part in higher-order cognitive functions, impulse control, and executive decision-making.  
11 These regions of the brain are central to the process of planning and decision-making, including  
12 the evaluation of future consequences and the weighing of risk and reward. They are also essential  
13 to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal  
14 cortex is one of the last regions of the brain to mature.

15 133. During childhood and adolescence, the brain is maturing in at least two major ways.  
16 First, the brain undergoes myelination, the process through which the neural pathways connecting  
17 different parts of the brain become insulated with white fatty tissue called myelin. Second, during  
18 childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused  
19 synapses, leading to more efficient neural connections. Through myelination and pruning, the  
20 brain’s frontal lobes change to help the brain work faster and more efficiently, improving the  
21 “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift  
22 in the brain’s composition continues throughout adolescence and into young adulthood.

23 134. In late adolescence, important aspects of brain maturation remain incomplete,  
particularly those involving the brain’s executive functions and the coordinated activity of regions

involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and for mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

135. The algorithms in Meta’s social media products exploit minor users’ diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users’ incomplete brain development. Meta knows that because its minor users’ frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Meta has failed to design its product with any protections to account for and ameliorate the psychosocial immaturity of its minor users. On the contrary, Meta specifically designs its product with these vulnerabilities in mind.

**F. Meta Misrepresents the Addictive Design and Effects of its Social Media Product**

136. At all times relevant, Meta has advertised and represented that its product is appropriate for use by teens and has stated in public comments that its product is not addictive and was not designed to be addictive. Meta knows that those statements are untrue.

137. Meta did not warn users or their parents of the addictive and mentally harmful effects that the use of its product was known to cause amongst minor users, like Alexis Spence. On the contrary, Meta has gone to significant lengths to conceal and/or avoid disclosure of the true nature of its product.

**G. Plaintiffs Expressly Disclaim Any and All Claims Seeking to Hold Meta Liable as the Publisher or Speaker of Any Content Provided, Posted or Created by Third Parties**

138. Plaintiffs seeks to hold Meta accountable for its own alleged acts and omissions. Plaintiffs’ claims arise from Meta’s status as the designer and marketer of dangerously defective

1 social media products, as well as Meta’s own statements and actions, not as the speaker or  
2 publisher of third-party content.

3 139. Meta has designed its product to be addictive. For example, Meta has developed  
4 and modified product features like the continuous loop feed and push notifications, to incentivize  
5 users to stay on the product as long as possible and to convince users to log back on. Meta’s  
6 algorithm even calculates the most effective time to send such notifications, which in the case of  
7 teen and tween users often means in the middle of the night and/or during school hours. Essentially,  
8 the times they are least likely to have access to Meta’s social media product, which also—as Meta  
9 knows—are the times that their health and well-being necessitate them not being on Meta’s social  
10 media product. Meta’s product is designed to and does addict users on a content neutral basis.

11 140. Meta’s algorithm structure is by itself harmful to users, again, irrespective of  
12 content. For example, a primary purpose of Meta’s algorithm design is to determine individual  
13 user preferences first so that Meta can then influence user behavior and choices second—which is  
14 particularly dangerous in the case of teens.

15 141. It is clear from Meta’s records that Meta uses its product both to “experiment” on  
16 and test its users in ways heretofore unimagined, but also, it seeks to control user behavior through  
17 product features and capabilities and for the specific purpose of acquiring and retaining users.

18 142. On a content neutral basis, the manipulation and control Meta knowingly wields  
19 over its users daily is profoundly dangerous.

20 143. Meta’s Integrity Team employees regularly provide Meta leadership with warnings  
21 and recommendations, which Meta leadership regularly ignores. As explained in the employee  
22 departure memos previously discussed, Meta imposes insurmountable hurdles when it comes to  
23 making their existing and in-development products safer, while it imposes no user safety

requirements when it comes to making its products more engaging.

144. Meta is responsible for these harms. These harms are caused by Meta's designs and design-decisions, and not any single incident of third-party content. Meta's Integrity Team employees flagged these issues for Meta leadership countless times and were consistently ignored. For example, in 2019, Meta recognized a number of harms it is causing to its users via,

- a. Recommendations: "When we ... affirmatively recommend things to people, we have heightened responsibility."
- b. Design features in Meta's control: "When features (or entire products) are widely abused for harms, we have heightened responsibility."
- c. Ranking: "We should fix 'perverse incentives' in connected ranking that have the effect of disproportionately amplifying harms relative to positive value."
- d. Monetization: "When we may be directly profiting off harms or are helping facilitate a financial ecosystem that enables this, we have heightened responsibility."

*Success is addressing all places where our products are disproportionately amplifying harms relative to a world where they did not exist, starting with the places where we have the highest responsibility.*

1 This breaks down into the following **highest responsibility areas**:

- 1) **Recommendations**: When we (as Facebook) affirmatively recommend things to people, we have heightened responsibility. We should not recommend things that promulgate harms in "push" experiences or in places where people seek out information on a topic. Goal: get these to 0. Examples of "push" are In-Feed Recommendations, PYML, GYSJ, IG Suggestions, Ads. An example of seeking out info is searches for "vaccines".
- 2) **Abuse**: When features (or entire products) are **widely abused for harms**, we have heightened responsibility. We should fix rate limits around inviting, forwarding, or entity size that are disproportionately abused to amplify harms relative to positive value, including considering removing some features or products. An example would be **unrestricted message forwarding** in Messenger or WhatsApp.
- 3) **Perverse Incentives**: When connected ranking is **widely abused or otherwise amplifies harms**, we have heightened responsibility. We should fix "perverse incentives" in connected ranking that have the effect of disproportionately amplifying harms relative to positive value. Examples are **manufactured virality** or **reshare downstream boosts** in FB App News Feed.
- 4) **Monetization**: When we may be directly profiting off of harms or are helping facilitate a financial ecosystem that enables this, we have heightened responsibility. This means we need to have higher standards around Recommendations, Abuse, and Perverse Incentives in areas related to monetization. Examples are Ads, Partner Monetization and Marketplace.

Note that by this definition, we do not in general have heightened responsibility to reduce the prevalence of problematic content that **people want to see** in connected distribution surfaces (e.g. FB App News Feed), as long as we have fulfilled our other heightened responsibilities above.

clearly our responsibility to solve.

**B) Simplicity of Execution.** Recommendations are the places where we have the most control (and fewest constraints), so it's much easier to take more "extreme" measures in favor of mitigating harms. Also, while unconnected Recommendation systems do drive nontrivial positive product value, even if they \*all\* went away, the vast majority of positive product value still remains (for example, WhatsApp has succeeded despite not having PYMK). The same likely applies around Abuse and Perverse Incentives. Additionally, many of the solutions to these three areas can be achieved in content-agnostic ways, which significantly simplifies policy, execution, and operational costs.

**C) Impact.** It's likely that some of the highest impact changes to prevalence in general actually will come from moving "upstream" of downranking problematic content in surfaces like FB App News Feed and addressing issues around Recommendations, Abuse and Perverse Incentives (see examples later in this note). For example, removing health as a topic from downstream reshare boosts reduces health link misinfo prevalence by 48% (compared to 17% of health link overall), with no top-line effect on sessions or MSI. So we can have our cake and eat it too.

FBP 21/13, "Defining success in addressing Integrity harms, starting with defining our responsibilities" (2019), at p. 2-3.

145. Meta failed to warn minor users and their parents of known dangers arising from anticipated use of its Instagram product. These dangers are unknown to ordinary consumers but are known to Meta and its employees. Moreover, these dangers do not arise from third-party content contained on Meta's social media platform. This lawsuit does not involve a suit against a web browser provider for making available third-party content. To the contrary, Meta,

- a. Designed and constantly redesigns its Instagram product to attract and addict teens and children, its "priority" user group.
- b. Designed and continues to operate its Instagram product to ensure that teens and children can obtain unfettered access, even over parental objection.
- c. Knows when teens and children are opening multiple accounts and when they are accessing its product excessively and in the middle of the night—which Meta considers to be a "value add proposition."
- d. Works with advertisers and influencers to create and approve harmful content and

1 provides direct access to its “acquired” teens and children—a user population Meta  
2 itself recognizes as being “vulnerable.”

- 3 e. Operates and provides the above Instagram product with the single-minded goal of  
4 increasing user engagement, including but not limited to things like maintaining  
5 harmful social comparison features and approving algorithm programming that  
6 promotes harmful content over clear dangers to user safety.

7 146. While it may be a third-party creates a particular piece of harmful content, the teens  
8 and children harmed by Instagram are not being harmed by a single piece of harmful content. They  
9 are being harmed by Instagram’s algorithmic programming and business decisions to show teens  
10 and children a constant barrage of harmful content to obtain more advertising revenue and increase  
11 engagement.

12 147. Alexis Spence and children like her do not open Instagram accounts in the hopes  
13 of becoming addicted. Nonetheless, such children *do* become addicted, leading them to engage in  
14 foreseeable addict behaviors, such as lying to their parents, hiding their use of Instagram, losing  
15 control and becoming irritable, even violent, when access is denied, and hyper-vigilance to avoid  
16 detection. These and other behaviors can and do result in serious harm to Instagram’s minor users.

17 148. Alexis Spence and children like her do not start using Instagram in the hopes of  
18 being exposed to product features that cause harm to them. Yet Instagram use involves harmful  
19 forms of social comparison and inevitably pushes such children towards harmful “rabbit holes,”  
20 causing anxiety, depression, eating disorders, and self-harm—harms Meta itself has acknowledged  
21 repeatedly in internal documents.

22 149. The harms at issue in this case do not relate to or arise from third-party content, but  
23 rather, Meta’s product features and designs, including algorithms that (a) addict minor users to

Meta's product; (b) amplify and promote harmful social comparison through Instagram product features; (c) affirmatively select and promote harmful content to vulnerable users based on its individualized demographic data and social media activity; and (d) put minor users in contact with dangerous adult predators. Indeed, the foregoing are merely examples of the kinds of harms at issue in this case.

150. Meta's product is addictive on a content neutral basis. Meta designs and operates its algorithms in a manner intended to and that does change behavior and addict users, including through a natural selection process that does not depend on or require any specific type of third-party content.

151. Meta has designed other product features for the purpose of encouraging and assisting children in evasion of parental oversight, protection, and consent, which features are wholly unnecessary to the operation of Meta's product. This includes, but is not limited to, Meta's failure to check identification or verify validity of user-provided email credentials, while simultaneously implementing product design features (such as easier ability to switch between accounts) meant to ensure easy access by children and teens, irrespective of parental consent.

152. Meta also promotes, encourages, and/or otherwise contributes to the development of harmful content. This Complaint quotes from just a few of the thousands of Meta documents disclosed by the Facebook Whistleblower, which establish this.

153. Meta also approves ads that contain harmful content, for example, and as discussed at the Senate hearing held on October 5, 2021,<sup>20</sup>

---

<sup>20</sup> <https://www.rev.com/blog/transcripts/facebook-whistleblower-frances-haugen-testifies-on-children-social-media-use-full-senate-hearing-transcript>

**Senator Mike Lee: (01:21:34)**

Now, since that exchange happened last week, there are a number of individuals and groups, including a group called the Technology Transparency Project or TTP, that have indicated that that part of her testimony was inaccurate. That it was false. TTP noted that TTP had conducted an experiment just last month, and their goal was to run a series of ads that would be targeted to children ages 13 to 17, to users in the United States. Now, I want to emphasize that TTP didn't end up running these ads. They stopped them from being distributed to users, but Facebook did in fact approve them. As I understand it, Facebook approved them for an audience of up to 9.1 million users, all of whom were teens.

**Senator Mike Lee: (01:22:31)**

I brought a few of these to show you today. This is the first one I wanted to showcase. This first one has a colorful graphic encouraging kids to, "Throw a Skittles party like no other," which as the graphic indicates, and as the slang jargon also independently suggests, this involves kids getting together randomly to abuse prescription drugs. The second graphic displays an ana tip. That is a tip specifically designed to encourage and promote anorexia. It's on there. Now the language, the ana tip itself independently promotes that. The ad also promotes it in so far as it was suggesting. These are images you ought to look at when you need motivation to be more anorexic, I guess you could say. Now the third one invites children to find their partner online and to make a love connection. "You look lonely. Find your partner now to make a love connection."

154. In other words, Meta approves advertisements "designed to encourage and promote anorexia" and encouraging children to abuse prescription or illegal drugs, which ads Meta then targets specifically at children in exchange for payment from the advertisers.

155. Meta utilizes private information of its minor users to "precisely target [them] with content and recommendations, assessing what will provoke a reaction," including encouragement of "destructive and dangerous behaviors."<sup>21</sup> Again, Meta specifically selects and pushes this

<sup>21</sup> See <https://www.rev.com/blog/transcripts/facebook-whistleblower-frances-haugen-testifies-on-children-social-media-use-full-senate-hearing-transcript>. ("October 5, 2021, Senate Hearing Transcript"), Mr. Chairman Blumenthal at 00:09:02.

harmful content, for which it is then paid, and does so both for that direct profit and also to increase user engagement, resulting in more profits down the road. “That’s how [Meta] can push teens into darker and darker places.”<sup>22</sup> Meta “knows that its amplification algorithms, things like engagement based ranking ... can lead children ... all the way from just something innocent like healthy recipes to anorexia promoting content over a very short period of time.”<sup>23</sup> Meta has knowledge that its product and the content they are encouraging and helping to create is harmful to young users and chooses “profits over safety.”<sup>24</sup>

156. Meta has information and knowledge that can determine with reasonably certainty each user’s age, habits, and other personal information, regardless of what information the user provides at the time of account setup. Meta can also determine on a mass scale and with reasonably certainty which of its users are teens, regardless of what information they provide at the time of account setup. Meta has used this capability for its own economic gain. The following are some of the Facebook Paper references to the various technologies Meta has developed for this precise purpose over the last several years,

## Weakness among the youngest

While we can tell that Messenger is doing far worse with teens than adults throughout the West, we can examine this at a finer grain in the United States, thanks to the age affinity model (3).

FBP 37/14, “The State of Teens & Messenger” (June 2, 2017), at p.5.

---

<sup>22</sup> *Id.*

<sup>23</sup> October 5, 2021, Senate Hearing Transcript, Ms. Francis Haugen at 00:37:34.

<sup>24</sup> *Id.* at 02:47:07.

## How do we identify teens?

- We have hitherto been using the Age Affinity (AA) model to identify teens (13-17y), but are switching to the Adult Classifier (AC) model, as it is more accurate and comprehensive for IG.
- However AC only predicts teen vs. adult label and not the exact age, which limits our ability to do age-specific analyses

	Adult Classifier	Age Affinity
Coverage	All IG users	IG users with 5+ friends who have a stated age on FB
Accuracy*	Higher for IG users (F1 score = 0.83)	Marginally lower (F1 score = 0.74)
Granularity	Teen vs. Adult only	Actual Age

FBP 24/04, “How are Teens doing on IG” (July 2019), at p. 6.

## Use of teen\_non\_teen to target different product experiences

My team has recently discussed using the teen\_non\_teen in dim\_ig\_users to target a product experience in Explore (e.g. teen s see a certain placement experience and non\_teen s see a different placement experience).

Has there been any similar production use of teen\_non\_teen ? Is this even condoned use of teen\_non\_teen ?

12 Comments Seen by 340

FBP 24/07, “Use of teen\_non\_teen to target different product experiences” (September 18, 2019), at p. 1.

## Signal Boosting New Teen Model

TL:DR

- New IG teen/non-teen predictions for analytics are now available for US accounts. Additional markets coming in H2 (targeting more FCI, with priority on IN, UK, JP).
- Legacy Teen Model is not accurate we should not use it, core dimension team is planning to deprecate the legacy model by end of the year.

### WHEN WE CAN USE IT ?

- Teen/Non-Teen Analyses, Experimentation analysis (teen user attribute, teen metrics once built) , and Integrity use-cases.
- Not yet: Goaling & Trends, Experimentation targeting/GKs, Product use-cases not about Integrity. For product use cases we would need PXFN approval. More details [here](#)

## IG Panorama (Navigation Overhaul) US Teens test

We want to use the new US Teen model to target a Teens-specific test of our new experimental navigational variants. We need to start this test in the next 1-2 weeks.

One Pager: <https://fb.quip.com/azhkAem6OseX>

Let me know if this seems reasonable!

FBP 24/05, *How do we know who's a teen* (September 22, 2020), at p. 1-2.

157. None of Plaintiffs' claims rely on treating Meta as the publisher or speaker of any third-party's words or content. Plaintiffs' claims seek to hold Meta accountable for its own allegedly wrongful acts and omissions, not for the speech of others or for Meta's good faith attempts to restrict access to objectionable content.

158. Plaintiffs are not alleging that Meta is liable for what the third parties said, but for what Meta did.

159. None of Plaintiffs' Claims for Relief set forth herein treat Meta as a speaker or

1 publisher of content posted by third parties. Rather, Plaintiffs seek to hold Meta liable for its own  
2 speech and its own silence in failing to warn of foreseeable dangers arising from anticipated use  
3 of its product. Meta could manifestly fulfill its legal duty to design a reasonably safe social media  
4 product and furnish adequate warnings of foreseeable dangers arising out of the use of its products  
5 without altering, deleting, or modifying the content of a single third- party post or communication.  
6 Some examples include,

- 7 a. Not using its addictive and inherently dangerous algorithm in connection with any  
8 account held by a user under the age of 18.
- 9 b. Not permitting any targeted advertisements to any user under the age of 18.
- 10 c. Fixing or removing all features that currently do not implement the tools Meta uses  
11 to identify and remove harmful content (particularly since Meta knows that its  
12 algorithms and other systems are pushing these higher risk features  
13 disproportionately to protected classes).
- 14 d. Prioritizing internally its removal of harmful content over the risk of losing some  
15 user engagement—*i.e.* users who might be offended when Meta takes down what  
16 it believes to be harmful content.
- 17 e. Requiring identification upon opening of a new account, and restricting users under  
18 the age of 18 to a single account. This is something teens have even asked Meta to  
19 do *for their safety*, “Teens in the UK suggested individuals only be allowed to have  
20 one account ... some went so far as to recommend the account be verified by a  
21 password ...” FBP 23/01, “Teen Mental Health Deep Dive” (October 10, 2019), at  
22 p. 81.
- 23 f. Requiring verification by email when a user opens a new account. Not requiring

1 verification allows underage users to access Instagram and does not stop bad actors.  
2 Meta employees have recognized this shortcoming and have recommended change.  
3 *See*, FBP 08/10, “Over Enforcement Update” (March 2020), at p. 44, 48 (“It is  
4 much easier to create an account without needing to use a valid contact point of  
5 contact,” and recommending “Ship confirmation on email registrations.”).

6 g. Immediate suspension of accounts where Meta has reason to know that the user is  
7 under the age of 13, including when the user declares that they are under the age of  
8 13 in their bio or comments and where Meta determines an “estimated” age of under  
9 13 based on other information it collects; and not allowing the account to resume  
10 until the user provides proof of age and identity and/or parental consent.

11 h. Suspension of accounts where Meta has reason to know that the user is over the age  
12 of 18, but where they are providing information to suggest that they are minors  
13 and/or are representing themselves as minors to other Instagram users; and not  
14 allowing the account to resume until the user provides proof of age and identity.

15 i. Launching Project Daisy and Pure Daisy, meaning that each user could see their  
16 own likes but would be unable to see the likes on any other user’s posts and  
17 comments.

18 j. Instituting advertising safeguards to ensure that Meta is not profiting directly from  
19 or otherwise pushing or endorsing harmful advertising content.

20 k. Requiring that all teen user accounts be set to private and not allowing any user  
21 under the age of 18 to change user settings to public.

22 l. Not permitting direct messaging with any user under the age of 18 if that minor  
23 user is not already on a user’s friend list.

m. Requiring parental consent and restricting account access for users under the age of 18 to prevent usage at night and during regular school hours.

160. These are just some examples, all of which could be accomplished easily and/or at commercially reasonable cost. Meta itself has discussed and considered many of these, but its leadership ultimately declined to make such product changes because such changes—while better for the health and wellbeing of Instagram users—could result in a relatively small decrease to Meta’s more than \$200 billion in annual revenue.

## V. PLAINTIFF-SPECIFIC ALLEGATIONS

161. Alexis Spence was born on June 22, 2002, and grew up in Yaphank, New York.

162. Alexis was a confident and happy child, who loved reading, writing, and helping people and animals. She dreamed about becoming a veterinarian. She was active in singing competitions and theater, enjoyed being in the spotlight, and looked for opportunities to shine.

163. Alexis’s 2012 journals are filled with photos of her family and happy memories.

164. Alexis got her first internet-enabled tablet device for Christmas in 2012, when she was 10 years old. She did not have access to social media, however, as her parents regularly checked her device and took other steps to make sure that she was not accessing inappropriate

1 content. They also had a house rule that all devices were to be kept in the hallway at night. Alexis  
2 did not initially mind these restrictions because she used her tablet primarily to play Webkinz and  
3 make Webkinz videos. Webkinz are stuffed animals that come with a code you can use to play  
4 Webkinz games electronically. But in 2013, everything changed.

5 165. Meta purchased Instagram in 2012 for \$1 billion dollars and, by the time Alexis  
6 started fifth grade, the Instagram social media product was rapidly increasing in popularity and  
7 rapidly evolving in terms of its design and product features. Meta made some of the most  
8 significant, and harmful, changes to its Instagram product from 2012 to 2016, including targeted  
9 advertising features, Explore, algorithmic changes promoting engagement over integrity, Reels,  
10 Stories, Live, the “like” button, view counters, easier access to multiple accounts, and direct  
11 messaging, to name a few. Alexis was exposed to and harmed by those changes without her  
12 parents’ knowledge or consent.

13 166. As Alexis approached fifth grade, it seemed like all her friends had Instagram  
14 accounts. She started getting teased for not having one and her friends told her that she needed to  
15 open an account and could open one even if her parents said no. Instagram designed its product to  
16 provide access to as many people as possible, without regard to age or safety, and this was well  
17 known among children her age.

18 167. It was also understood that Instagram wouldn’t close your account for being under  
19 13, you just had to say you were 13 when opening an account and could then put your real age in  
20 your bio. In fact, this is something many kids do even to this day. It was also understood that  
21 Instagram did not object to kids using more than one account, which made it easier to hide more  
22 personal content and the existence of secondary accounts from parents and family—which  
23 accounts Instagram and its young users refer to as FINSTAs (short for “fake Instagram”).

1           168. In 2013, Alexis was 11 years old and in the fifth grade. She opened her first  
2 Instagram account, without her parents' knowledge or consent. She could not access the account  
3 often since her parents monitored her tablet and did not allow social media. Nonetheless, on  
4 November 6, 2013, she wrote in her private journal,

5           book. On Instagram I reach 187  
6 followers. Ya! Lets put it this way,  
7 if I was happy and excited for  
8 10 followers then this is just  
9 AMAZING!!!  
10

11           169. Instagram had actual knowledge that Alexis was under the age of 13. Alexis' first  
12 bio (which was often publicly viewable) read "11 years young" and when Alexis turned 12, she  
13 changed it to "12 years young." She also regularly published her real age including, for example,  
14 in comments she left on other users' posts and/or pages,

15           "Hello, I'm 12 years old and love webkinz ..."

16           "I'm 12 and love them ..."

17           "I'm almost 13"

18           170. Alexis's secret use of and developing addiction to Instagram coincided with a  
19 steady, but severe, decline in her mental health. As Alexis became more dependent on Meta's  
20 addictive-design social media product, she began to resent her parents for not allowing her to have  
21 an Instagram account and her inability to access that account at home. She also began engaging in  
22 harmful social comparisons, of the types identified by Meta in its studies. In November of 2013,  
23 she was starting to show signs of depression and her parents sought mental health treatment—they

started her in counseling. They did not know that Alexis was using social media, and Alexis refused to continue seeing the counselor after a couple sessions.

171. In May of 2014, Instagram provided Alexis with a solution to her access problem. Instagram featured user content advising Alexis, and other children like Alexis, on how to bypass parental controls. Alexis saw content from other users explaining how to obtain your parents' passcode as well as applications you would need to download to hide Instagram once you were able to get it onto your device. Alexis did just that. She used the information obtained from Instagram to get an application that enabled to her to make the Instagram application icon look like a calculator, which she then moved next to other utilities applications. Alexis's parents continued with their periodic checks of her electronic devices but never realized that what appeared to be a calculator was really the Instagram social media product.

172. As a proximate result of Instagram's addictive design and Alexis's addiction to the Instagram social media product, she lied to and tricked her parents. She felt guilty for her actions, but also felt like Instagram was something she needed and that her parents were being unreasonable in denying her access.

173. On May 23, 2014, Alexis opened her second Instagram account. She was still only 11 years old. Meta provided Alexis with access to this second account through a school-issued email address, to which Alexis did not even have inbox access. That is, Meta has designed its product to not require identification or age verification and, also, Meta purposefully does not verify or check email account authenticity, at least in part, so that it can claim plausible deniability as to the millions of young children using its application that are below the age of thirteen and/or lack parental consent. In fact, when opening one of her later FINSTAs, Alexis got tired of creating fake accounts so she hit the keyboard randomly and used [fhdjenfjsodndjd@hotmail.com](mailto:fhdjenfjsodndjd@hotmail.com) as her account

6-9-14

I'm a little annoyed  
at mommy. She yelled at me  
because I had my tablet on to  
look up rain to see if Apple Jack  
Honest truck. Cross my heart  
hope to fly stick a cupcake in  
my eye.

176. Meta also had knowledge that Alexis began accessing her multiple Instagram accounts in the middle of the night and for several hours at time, which addictive and unhealthy behavior foreseeably compounded the harms to Alexis and her family and caused additional harms. Once again, Instagram did not notify Alexis's parents or take any other step to restrict her access to its social media product. On the contrary, Instagram is aware of FINSTAs and considers the opening of multiple accounts by its teen users as a primary source of engagement and growth.

## Unlike FINSTAs, There Isn't Strong Signal that SUMAs Increase Engagement for Teens

SUMAs have caught the Youth team's attention because their Instagram counterpart, FINSTAs, are popular amongst teens. In the US, teens post **2x more on their FINSTAs**.

FBP 20/13, "SUMAs as Account Reset: Increasing Engagement through Creating a Better Account" (December 20, 2017), at p. 5.

### Strategies for this group:

We should talk to these teens to better understand why they created multiple accounts and how they use multiple accounts. These teens likely overcame several hurdles in creating a multi-account experience that works for them. Knowing and clearing some of these hurdles could lead to large growth and sharing increases.

FBP 20/17, *Teen SUMA usage* (January 12, 2018), at p. 10.

177. In Meta's words, this is a "unique value prop[osition]" and Meta goes so far as to engage in outreach educating teens on their ability to open multiple accounts,

## Efforts are underway to increase awareness of unique value props such as multiple accounts.

Approximately **20% of teens are unaware of multiple accounts**. To increase awareness, UXR is working on understanding the barriers and needs around multiple accounts (e.g. [mimicry work](#))

1 FBP 42/15, “The Power of Identities: Why Teens and Young Adults Choose Instagram - A UXR,  
2 Market Research and Data Perspective,” at p. 34.

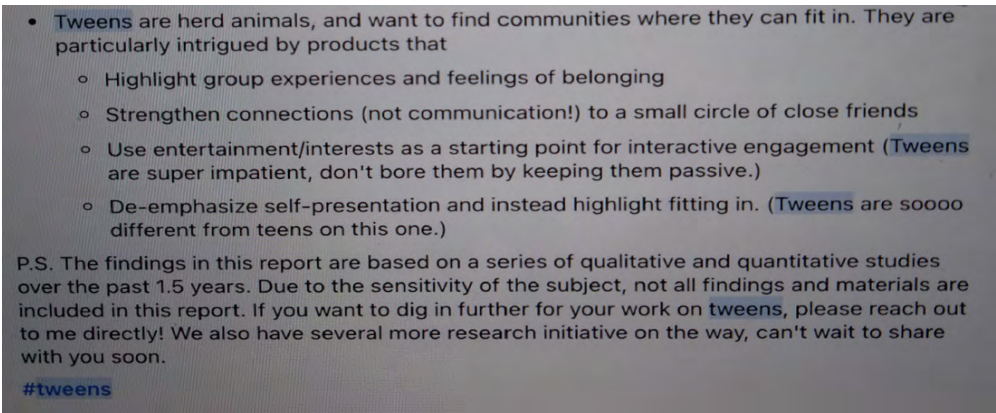

3 178. For every minute Alexis spent on Instagram in the middle of the night, Meta earned  
4 more money. In fact, Meta is fully aware as to the times of day when users are on Instagram, how  
5 long they are on Instagram, and even that middle of the night usage is a significant indicator of  
6 addiction (which Meta prefers to call “problematic use”). Meta simply doesn’t care enough to do  
7 anything about it and Meta’s leadership has taken the position internally that engagement and  
8 retention are the top priorities, with user safety coming in distant third.

9 179. Through her use of Instagram Alexis also received explicit sexual communications  
10 and images from adult users and was messaged and solicited for sexual exploitive content and acts  
11 on numerous occasions by adult users of Instagram. These adult users are encouraged to use  
12 Instagram to sexually solicit and abuse minors due to Meta’s refusal to verify identity and age for  
13 new users or implement feasible safeguards to protect minor users from receiving inappropriate  
14 sexual content.

15 180. At all times relevant, Meta knew that some of its Instagram users would become  
16 addicted to Instagram (or, in Meta’s words, would engage in “problematic use”). Meta also knew  
17 that children and teenagers would be particularly susceptible, and Meta knew or should have  
18 known what an addiction like this would do those children and teenagers and their families. To  
19 name only a few examples, Alexis spent increasing amounts of time consuming the unhealthy  
20 content and product features Instagram served up to her. This meant waiting up and sneaking her  
21 device from the hallway after her parents went to sleep. It meant lying about what she was doing  
22 on her devices. It meant accessing Instagram even where her parents were in the same room, by  
23 pretending that she was playing Webkinz or similar, age-appropriate games—which required her

1 to always be on high-alert to not get caught. The harm proximately caused by this Meta-engineered  
2 addiction was made worse by the fact that Alexis was only 11 years old when she was first exposed  
3 to Meta's inherently harmful and addictive product.

4 181. Once again, however, Meta didn't care. For years, Meta has been conducting  
5 studies meant to help increase usage and dependency by children under 13, like Alexis. In Meta's  
6 own words,

- 
- Tweens are herd animals, and want to find communities where they can fit in. They are particularly intrigued by products that
    - Highlight group experiences and feelings of belonging
    - Strengthen connections (not communication!) to a small circle of close friends
    - Use entertainment/interests as a starting point for interactive engagement (Tweens are super impatient, don't bore them by keeping them passive.)
    - De-emphasize self-presentation and instead highlight fitting in. (Tweens are soooo different from teens on this one.)

P.S. The findings in this report are based on a series of qualitative and quantitative studies over the past 1.5 years. Due to the sensitivity of the subject, not all findings and materials are included in this report. If you want to dig in further for your work on tweens, please reach out to me directly! We also have several more research initiative on the way, can't wait to share with you soon.

#tweens

13 FBP 42/03, "Tweens and Social Media" (October 2017), at p. 1.

14 182. As a proximate result of the social media addiction Meta fostered and encouraged,  
15 Alexis spent increasing and unhealthy amounts of time on social media, became sleep deprived,  
16 became anxious, and felt guilty about what she was doing to her family. Her mental health and  
17 relationship with her parents suffered greatly as a result.

18 183. For example, any attempt by her parents to restrict device usage was met with  
19 extreme anger, including one time when Alexis punched a hole in the wall. And what had always  
20 been a close relationship with her mother rapidly evolved into one where Alexis began to see her  
21 mother as overprotective, irrational, and wrong.

22 184. Instagram's addictive design and product features led to Alexis feeling like it was  
23 her and her devices against her parents, which only worsened her depression and anxiety.

1           185. But also, and as Meta knows, the amount of time a user spends on Meta’s social  
2 media products can correlate to worsening depression and other harms.

3           186. In December 2013, Alexis got her first cell phone, but her parents got her a slide  
4 phone and not a smartphone. She had a lead part in the school play, which required her to stay late  
5 after school, so her parents wanted to make sure she could contact them if needed. Then in  
6 December 2014, Alexis begged her parents for a smartphone because her friends had one. They  
7 were able to get one cheap or for free through their phone carrier, so they agreed. But they took  
8 steps to install parental controls and did not allow her to take the phone in her room at night.  
9 Plaintiffs Kathleen and Jeffrey Spence also put parental controls on their home computer, again to  
10 make sure that Alexis was only using age-appropriate applications and features. Alexis used what  
11 she learned on Instagram to bypass those protections too and obtained even more access to  
12 Instagram because now she could use Instagram all day while at school on her cell phone.

13           187. In April of 2015—just four months after getting her first smart phone—12-year-old  
14 Alexis drew an image of herself next to her phone with the words “stupid ugly fat” on its screen.  
15 She had a similar image on her computer, and these same types of words reflected in her thoughts,

188. Alexis' social media use coincided with a steady, but severe, decline in her mental health. She was addicted to Meta's product and spent increasing amounts of time on social media, specifically, perusing content recommended and/or made available to her by Meta, which increasingly included underweight models, unhealthy eating, and eating disorder content.

189. From 2012 through 2015, Meta developed and implemented technologies and features designed to increase engagement (and its own profits) but which were harmful to users, including Alexis Spence. This included but is not limited to things like new advertising features, which allowed advertisers to target Alexis based on her age, location, gender, and other characteristics. Meta failed to exercise reasonable care to ensure that the advertisements were safe. Meta profited from its advertising practices and product features, while Alexis was exposed to and

harmed by harmful advertising content. For example,

- d. Alexis was only 11 years old when she opened her first Instagram account and, as such, was particularly vulnerable and the impact of her developing addiction to Instagram was made worse as a result.
- e. Meta designed its Instagram product to default minors to public profiles, exposing 11-year-old Alexis to inappropriate sexual content and serving her up for access to complete strangers who Meta knew posed the risk of bullying and exploitation.
- f. Instagram's product design, including things like search and explore and photo editing and filtering features, and Instagram's emphasis on advertiser content, caused Alexis to question her appearance and worth, and made her increasingly anxious and depressed.
- g. Because Meta does not limit the time young users spend on Instagram, Alexis began stealing her tablet out of the hallway at night to access her Instagram account, resulting in severe sleep deprivation, which only made things worse.

190. In 2016, Meta added several additional product features that Meta knew or should have known would be harmful to minor users of its Instagram product. For example,

- a. In February 2016, Instagram started enabling users to easily switch between multiple accounts. Alexis opened at least three more FINSTAs (secret Instagram accounts) in 2016 alone and Meta exposed Alexis to addictive design, harmful advertising, and other, Meta-backed content through those accounts too.
- b. In February 2016, Instagram added view counters to videos, increasing the social comparison harms already caused to Alexis by Instagram.
- c. In March 2016, Meta switched its feed from chronological to algorithm-driven

ordering. Alexis no longer simply saw posts made by “friends” in the order they were made but, instead, Meta prioritized and escalated certain posts and content in Alexis’s Instagram feed. More specifically, it promoted and prioritized harmful content based on the determination that such content was more likely to keep Alexis’s attention, thereby increasing her use of its product and its resulting revenue. While Meta’s prior product design was pushing constant social comparison and eating disorder content to Alexis, the new design bombarded her with it and Alexis’s exposure to super thin models and eating disorder content increased exponentially.

d. In August and November 2016, Instagram implemented Stories and Live product features, respectively, which again increased Alexis's exposure to harmful content, as well as her social pressure to participate and engage with Instagram.

e. In December 2016, Instagram implemented the ability to mark comments as “liked,” which was initially available only on the mobile application, which is how Alexis accessed Instagram most of the time by 2016—via her cell phone. The “like” feature was particularly harmful to young users, as Meta discovered, and this product feature resulted in increased feelings of depression, anxiety, and low self-worth.

191. The more Alexis accessed and used the Instagram social media product, the worse her mental and physical health became, which eventually included a life-threatening eating disorder and suicidal ideation.

192. Alexis had always been slender, but after Instagram’s algorithm and design started pushing extreme weight loss content and bulimia purging instructions, and recommending pages

featuring excessively thin models, Alexis became obsessed with her weight. From the outset, Alexis' Explore page was filled with nothing but overly thin models and thigh gaps.

193. Alexis started looking into diets and healthy eating, which led to more harmful content. Eventually, Instagram’s algorithms led her to the terms “ana” and “pro-ana” in hashtags Meta permitted in its Instagram user Stories. Pro-ana refers to the promotion of behaviors related to the eating disorder anorexia nervosa. As made clear through internal Meta documents, Instagram’s provision of that material to Alexis was both harmful and the result of a design defect.

194. Meta amplified and pushed Alexis toward harmful content through various recommendation mechanisms built into its Instagram product. For example, Meta sent Alexis recommendations to eating disorder and self-harm themed pages and groups. Meta also sent Alexis recommendations for “friends” who were, in fact, adult Instagram users either suffering from these mental health issues themselves or using the Instagram product to find and exploit young girls; and, likewise, Meta recommended Alexis to these same types of adult users, who then sought to connect with her. As made clear through internal Meta documents, these product features are harmful to a significant percentage of Instagram users, particularly teens and young women.

195. Meta also harmed Alexis through specific product features like direct messaging and group chat. For example, Instagram’s Direct Message and group chat features allowed adult users to message Alexis directly, and to create eating disorder and self-harm themed group chats, exposing Alexis (a child) to several of these adult users at one time. As made clear through internal Meta documents, these product features are harmful to a significant number of underage users. They also are not necessary to Instagram’s operation and are features Meta can restrict and/or disable—but Meta makes calculated and economic-based decisions to keep them in place because Meta knows that restricting or disabling them would negatively impact engagement and revenue.

1 196. Meta documents discuss how the Instagram social media product causes these exact  
 2 harms. For example, Meta conducted testing on harmful eating disorder content and Instagram  
 3 features Suggestions for You and IG Explore. Test 1 showed Instagram amplifying and pushing  
 4 harmful eating disorder content to the user,

#### 5 Test 1

- 6 • **Hypothesis:** If you are seeking out eating disorder type content, you will be served more of it over time through discover/explore/accounts you may know. This content could be considered for our borderline ED policy.
- 7 • **Risk Area:** *Harmful Content Risk, Operational Risk, Regulatory Risk*
- 8 • **Evidence:** Based on the way our algorithms are designed to work, the content you seek is the content you will be served. Based on accounts you currently follow, you will be served more of those.
- 9 • **Test:** By using a test account I followed authentic content dealing with but not limited to dieting, weight loss, content tagged with #skinny, #skinnywoman, #thin etc. I will follow those hashtags and accounts as well. I did not follow private accounts, like or comment on any content. I recorded the way the content served to me changes over time, and documented content served that appears violating or borderline.
- 10 • **Results:** My test user was served violating content and accounts through IG explore surface and Accounts Suggested For You after following other ed-related accounts.
- 11 • **Problem:** Violating accounts and content for eating disorders were recommended through Suggestions For You and IG Explore.
- 12 • **Root Cause(s):**
  - 13 ○ At the time the accounts were recommended, we had not launched account level proactive detection.
  - 14 ○ There are legal limitations to proactively detecting content and accounts in the EU.
  - 15 ○ It was not user reported.
  - 16 ○ The content shown in IG Explore is not tagged with any known ED hashtags.

#### 17 Test 2

- 18 • **Hypothesis:** IG stories can be named things that violate our policies for ED, making it appear that we allow users to spotlight violating content within their profiles.
- 19 • **Risk Area:** *Operational risk, Governance risk*
- 20 • **Evidence:** Using my test account I was able to create story highlights and name them anything I chose, including words that we have blocked or downranked. This is a violation agnostic issue found.
- 21 • **Test:** Use a test account to post stories, highlight them and then name them "Thinspo" or "Ana" or "nazi"
- 22 • **Problem:** Users can create and maintain IG Story Highlights that are named violating terms.
- 23 • **Root Cause:**
  - We currently don't have mechanisms for preventing users from titling their stories to anything they choose.
  - Story Highlights are not reviewed differently than stories that are only on the platform for 24 hours (without a title).
  - We currently don't show stories in any IGPR review queues.

FBP 19/21, “Eating Disorders [Risk Assessment] [Proactive Risk Investigation Request]” (March 2021), at p. 9, 11, 15.

197. Meta documents also discuss how the Instagram social media product causes harms to teens through Meta’s recommendation systems and product features like direct messaging. To name only a few examples, *see, e.g., supra*, FBP 42/16, “How should we default new teens into new interactions settings?: a survey of safety and value” (H1 2020); FBP 36/38, “Growth, Friending + PYMK, and downstream integrity problems”; FBP 09/21, “Giving People What They Want to See?” (September 16, 2019); FBP 20/08, “Replacing Downstream MSI for Civic and Health - Phase 1.”

198. At some point Alexis’s mother also discovered that she had an Instagram account, which resulted in more fighting and separation between Alexis and her parents. Ultimately, it was clear that Instagram would provide Alexis with means to access their product no matter what

1 Alexis's parents did and, by then, Alexis was already over the age of 12. There was nothing  
2 Alexis's parents could do, other than to keep an eye on her account usage and to remind her that  
3 she still had to abide by the house rules relating to electronic devices.

4 199. However, Alexis only disclosed the existence of one account—the account she  
5 considered to be her “personal” account—and none of her secret accounts. Instagram's provision  
6 of multiple accounts ensured that Alexis was able to continue hiding her most harmful Instagram  
7 activities from her parents. This is precisely what she did, and Alexis's continued addiction and  
8 sneaking around led to even more arguments and even greater anxiety and depression.

9 200. At one point, Kathleen Spence started trying to catch her daughter so she could find  
10 out what was wrong and why her daughter's mental health was not improving. On one occasion  
11 she thought she saw Alexis sign out of her one Instagram account and onto another. But again,  
12 Alexis vehemently denied it,

Dear mom,

I am truly sorry for my behavior. I was rude and it was unacceptable. I felt that you were wrong for falsely accusing me of signing out of account however now that I have had time to reflect I understand that I was wrong and should've gone about it in a different way. I don't try to lose my patients and I'm going to try even harder to keep calm and not lose my patients. I promise I will tell you more because I understand it hurts you.

that ~~you don't~~ ~~understand~~ ~~me~~ ~~and~~ ~~it~~ ~~hurts~~ ~~me~~

I don't tell you things and it hurts me that you think I hate you because I don't. You don't understand how much I love and appreciate you and that hurts me.

201. Meta was providing Alexis with constant, harmful access to multiple Instagram accounts, and had designed and was operating Instagram in a manner that ensured that there was nothing Alexis's parents could do to stop it. But also, Meta was concealing from the public what it knew about addictive design and its own efforts to addict young children and what it was learning about the harm its specific product features were causing to children and teens—the precise types

1 of harms that were now happening to Alexis because of Instagram.

2       202. Alexis's parents had no way to even determine Instagram's role in Alexis's ongoing  
3 battle with severe depression, anxiety, self-harm, and eating disorders and as a direct result, could  
4 not obtain the information that they needed to enlist professional help.

5       203. By early 2018, Alexis's parents were aware of the self-harm and had just started to  
6 become aware of the eating disorder. They were getting medical treatment for Alexis and  
7 rearranging their schedules to make sure they could help her in any way she needed. To help Alexis  
8 further, they purchased her a therapy dog, Draco, and got him trained—at considerable expense—  
9 so that he would alert Alexis and her family if Alexis engaged in harmful behavior. Draco has  
10 helped Alexis in so many ways and saved her life on more than one occasion.

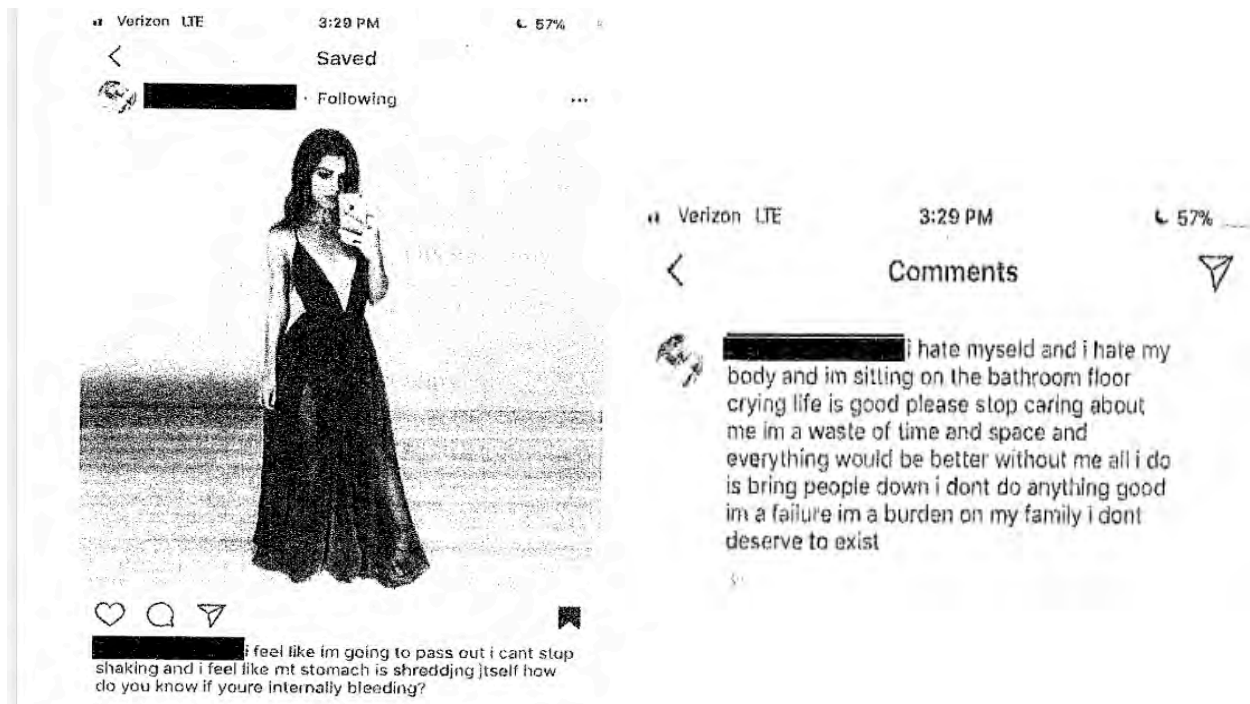

11       204. Then, on May 8, 2018, Alexis's school contacted Kathleen Spence and told her to  
12 come to school immediately. Kathleen was on her way to work, turned around, and called her  
13 mother and asked her to meet her at the school. Kathleen and her mother met with someone in the  
14 school guidance department, who told them that another student had sent some photos of messages  
15 Alexis sent and Instagram posts expressing a desire to commit self-harm and suicidal ideation. The  
16 guidance department employee showed Kathleen some of the documents but not all, and she still  
17 did not have the usernames on Alexis's secondary Instagram accounts. Moreover, at that time,  
18 Kathleen's only priority was to keep her daughter alive, so she contacted Stony Brook Children's  
19 Hospital for a referral and took Alexis to Mather Hospital.

20       205. Mather did not have an available bed but was the only viable option for the  
21 treatment Alexis required. As such, Plaintiffs Alexis Spence and her parents, Kathleen and Jeffrey  
22 Spence, stayed in the psychiatric wing of Mather for five days, while waiting for an available bed.

23       206. As documented in hospital records, Alexis was hospitalized for a total of ten days

in connection with “Anorexia Nervosa and associated habits of purging, as well as major depressive disorder and anxiety. Since outpatient treatment has begun, Alexis has continued to struggle. Over the past weeks these struggles have intensified including suicidal ideation. She was seen today after school alerted parents of various social media posts, including suicidality.” (Referral letter from Stony Brook Children’s Hospital, dated May 8, 2018).

207. The following are just some examples of information that had been provided to the school. To the best of Kathleen Spence’s recollection, these specific examples were not provided in 2018 but were obtained from the school years later (in 2022),

208. In May 2018, Alexis’s parents did not have access to Alexis’s “personal” Instagram account and did not know of the several other accounts to which Instagram provided her with access—or the harmful content contained in those accounts. Alexis’s parents were still struggling to understand what was happening and how they could help their daughter.

209. After Alexis’s release from Mather Hospital, on May 18, 2018, she received home

teaching for the remainder of her 10<sup>th</sup> grade year. Alexis had always done well in school and wanted to go to college and have a career, so her parents did everything they possibly could to prevent these events from derailing her education. They worked with teachers to get her assignments and tutoring, and enlisted family to help with home schooling. Alexis was able to finish 10<sup>th</sup> grade and keep her grades up only because of the incredible support and resources her family was able to provide.

210. Alexis graduated from high school in June of 2020 and started St Joseph's University in September of 2020. Shortly after the start of the school year, however, Alexis relapsed and engaged in extensive outpatient treatment. Alexis is aware of the challenges ahead and works hard every day to not slip back into her eating disorder.

211. Alexis's addiction and resulting mental health disorders were the proximate result of the unreasonably dangerous Instagram product Meta made accessible to her and that she used. As set forth in detail below, Meta's products were not reasonably safe due to their defective design and inadequate warnings.

212. To this day, Meta has actively concealed the fact and has “sought to stonewall and block this information [information about the dangerousness of their products, especially to young users] from becoming public.”<sup>25</sup> Meta “intentionally”<sup>26</sup> hid vital information in its possession from the public, the US government, and governments, including information relating to the safety of children and the role of its algorithms and other Instagram product features in causing addiction, depression, anxiety, eating disorders, and other harms.

213. Meta made false statements to the press and public, designed to cover up the

<sup>25</sup> October 5, 2021, Senate Hearing Transcript, Mr. Chairman Blumenthal at 00:05:21.

<sup>26</sup> *Id.* at 00:29:25.

1 inherent dangers of their products and, even when asked direct questions as to how those products  
2 “impact the health and safety of our children, they choose to mislead and misdirect.”<sup>27</sup>

3       214. Plaintiffs did not discover, or in the exercise of reasonable diligence could not have  
4 discovered, that Alexis’s addiction, depression, anxiety, eating disorders, and other harms were  
5 caused by Meta’s unreasonably dangerous products until September or October of 2021.

6       215. In April 2022, Alexis disaffirmed all contracts Instagram may purport to have with  
7 her and stopped using all Instagram accounts. She has not accessed those accounts since (and any  
8 access to those accounts was undertaken by legal counsel and counsel’s vendors for purposes of  
9 this lawsuit). Nor does she intend to access those accounts in the future.

10       216. As a result of Alexis Spence’s social media addiction and the harmful content and  
11 features Instagram relentlessly promoted and provided to her in its effort to increase engagement,  
12 she had to undergo professional counseling, in-patient programs, outpatient programs, and eating  
13 disorder programs, and she will likely require help in the form of a service dog for the rest of her  
14 life. She must stay in constant contact with her doctors, and fights to stay in recovery every day.  
15 Alexis will suffer permanent mental and emotional damages because of what Instagram has done.

16       217. Alexis’s doctors have also advised that long term physical damage is likely.

17       218. Alexis also requires the support of her parents and her service dog, Draco, and  
18 cannot live the independent and successful life she planned for herself. This situation is a direct  
19 and proximate result of the social media addiction Instagram fostered and encouraged for its own  
20 financial gain and harms that resulted therefrom.

21  
22  
23

## VI. PLAINTIFFS' CLAIMS

### COUNT I - STRICT PRODUCT LIABILITY (Design Defect)

219. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 218 as if fully stated herein.

220. Meta's product is defective because the foreseeable risks of harm posed by the product's design could have been reduced or avoided by the adoption of a reasonable alternative design by Meta and the omission of the alternative design renders the product not reasonably safe. This defective condition rendered the product unreasonably dangerous to persons or property and existed at the time the product left the Meta's control, reached the user or consumer without substantial change in the condition and its defective condition was a cause of Plaintiffs' injury.

221. Meta designed, manufactured, marketed, and sold a social media product that was unreasonably dangerous because it was designed to be addictive to the minor users to whom Meta actively marketed and because the foreseeable use of Meta's product causes mental and physical harm to minor users.

222. Meta's product was unreasonably dangerous because it contained numerous design characteristics that are not necessary for the utility provided to the user but are unreasonably dangerous and implemented by Meta solely to increase the profits they derived from each additional user and the length of time they could keep each user dependent on its product.

### A. Inadequate Safeguards From Harmful and Exploitative Content

223. As designed, Instagram algorithms and other product features are not reasonably safe because they affirmatively direct minor users to harmful and exploitative content while failing to deploy feasible safeguards to protect vulnerable teens from such harmful exposures. It is feasible to design an algorithm that substantially distinguishes between harmful and innocuous content and

1 protects minor users from being exposed to harmful content without altering, modifying, or  
2 deleting any third-party content posted on Meta's social media product. The cost of designing  
3 Meta's algorithms to incorporate this safeguard would be negligible while benefit would be high  
4 in terms of reducing the quantum of mental and physical harm sustained by minor users and their  
5 families.

6 224. Meta also engages in conduct, outside of the algorithms themselves, that is designed  
7 to promote harmful and exploitative content as a means of increasing its revenue from  
8 advertisements. This includes but is not limited to efforts to encourage advertisers to design ads  
9 that appeal to minors, including children under the age of 13; and product design features intended  
10 to attract and engage minor users to these virtual spaces where harmful ad content is then pushed  
11 to those users in a manner intended to increase user engagement, thereby increasing revenue to  
12 Meta at the direct cost of user wellbeing.

13 225. Reasonable users (and their parents) would not expect that Meta's product would  
14 knowingly expose them to such harmful content and/or that Meta's product would direct them to  
15 harmful content at all, much less in the manipulative and coercive manner that they do. Meta has  
16 and continues to knowingly use its algorithms on users in a manner designed to affirmatively  
17 change their behavior, which methods are particularly effective on (and harmful to) Meta's  
18 youngest users, like Alexis Spence.

## 19 **B. Failure to Verify Minor Users' Age and Identity**

20 226. As designed, Meta's product is not reasonably safe because they do not provide for  
21 adequate age verification by requiring users to document and verify their age and identity.

22 227. Adults frequently set up user accounts on Meta's social media product posing as  
23 minors to groom unsuspecting minors to exchange sexually explicit content and images, which

frequently progresses to sexual exploitation and trafficking.

228. Minor users of social media and their parents do not reasonably expect that prurient adults set up fraudulent accounts on Meta’s social media product and pose as minors for malign purposes.

229. Likewise, minor users who are under the age of 13 and/or whose parents have taken affirmative steps to keep them away from Meta’s product often open multiple accounts, such that Meta knows or has reason to know that the user is underage and/or does not have parental permission to use its product. Meta already has the information and means it needs to ascertain with reasonable certainty each user’s actual age and, at least in some cases, Meta utilizes these tools to investigate, assess, and report on percentages and totals of underage users for internal assessment purposes. They simply choose to do nothing about that information as it relates to the specific, underaged users themselves.

230. Moreover, reasonably accurate age and identity verification is not only feasible but widely deployed by online retailers and internet service providers.

231. The cost of incorporating age and identify verification into Meta’s product would be negligible, whereas the benefit of age and identity verification would be a substantial reduction in severe mental health harms, sexual exploitation, and abuse among minor users of Meta’s product.

### **C. Inadequate Parental Control and Monitoring**

232. Meta’s product is also defective for lack of parental controls, permission, and monitoring capability available on many other devices and applications.

233. Meta’s product is designed with specific product features intended to prevent and/or interfere with parents’ reasonable and lawful exercise of parental control, permission, and

1 rewards through Meta's integrated design features.

## 2 **F. Design of Addictive Social Media Products**

3       240. As designed, Meta's social media product is addictive to minor users as follows:  
4 When minors use design features such as "likes" it cause their brains release dopamine which  
5 creates short term euphoria. However, as soon as dopamine is released, minor users' brains adapt  
6 by reducing or "downregulating" the number of dopamine receptors that are stimulated and their  
7 euphoria is countered by dejection. In normal stimulatory environments, this dejection abates, and  
8 neutrality is restored. However, Meta's algorithms are designed to exploit users' natural tendency  
9 to counteract dejection by going back to the source of pleasure for another dose of euphoria. As  
10 this pattern continues over a period of months and the neurological baseline to trigger minor users'  
11 dopamine responses increases, they continue to use Instagram, not for enjoyment, but simply to  
12 feel normal. Once they stop using Instagram, minor users experience the universal symptoms of  
13 withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

14       241. Addictive use of social media by minors is psychologically and neurologically  
15 analogous to addiction to internet gaming disorder as described in the American Psychiatric  
16 Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5), which is used  
17 by mental health professionals to diagnose mental disorders. Gaming addiction is a recognized  
18 mental health disorder by the World Health Organization and International Classification of  
19 Diseases and is functionally and psychologically equivalent to social media addiction. The  
20 diagnostic symptoms of social media addiction among minors are the same as the symptoms of  
21 addictive gaming promulgated in DSM 5 and include:

22       242. Preoccupation with social media and withdrawal symptoms (sadness, anxiety,  
23 irritability) when the device is taken away or access is not possible (sadness, anxiety, irritability),

including,

- a. Tolerance, the need to spend more time using social media to satisfy the urge.
- b. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- c. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- d. Continuing to use social media despite problems.
- e. Deceiving family members or others about the amount of time spent on social media.
- f. The use of social media to relieve negative moods, such as guilt or hopelessness.
- g. Jeopardized school or work performance or relationships due to social media usage.

243. Meta's advertising profit is directly tied to the amount of time that its users spend online, and its algorithms and other product features are designed to maximize the time users spend using the product by directing them to content that is progressively more and more stimulative. Meta enhances advertising revenue by maximizing users' time online through a product design that addicts them to the platform. However, reasonable minor users and their parents do not expect that on-line social media platforms are psychologically and neurologically addictive.

244. It is feasible to make Meta's product less addictive to minor users by limiting the frequency and duration of access and suspending service during sleeping hours.

245. At negligible cost, Meta could design software that limits the frequency and duration of minor users' screen use and suspends service during sleeping hours; the benefit of minor users maintaining healthy sleep patterns would be a significant reduction in depression, attempted and completed suicide and other forms self-harm among this vulnerable age cohort.

**G. Inadequate Notification of Parents of Dangerous and Problematic Social Media Usage by Minor Users**

246. Meta's product is not reasonably safe as designed because it does not include any safeguards to notify users and their parents of usage that Meta knows to be problematic and likely to cause negative mental health effects to users, including excessive passive use and use disruptive of normal sleep patterns. This design is defective and unreasonable because:

247. It is reasonable for parents to expect that social media companies that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive or occurs during sleep time. It is feasible for Meta to design a product that identifies a significant percentage of its minor users who are using the product more than three hours per day or using it during sleeping hours at negligible cost.

248. Meta's product is not reasonably safe as designed because, despite numerous reported instances of child sexual solicitation and exploitation by adult users, Meta has not undertaken reasonable design changes to protect underage users from this abuse, including notifying parents of underage users when they have been messaged or solicited by an adult user or when a user has sent inappropriate content to minor users. Meta is aware of these harms,

FBP 47/23, “USI Revived” (May 1, 2020), at p. 17.

249. Meta’s entire business is premised upon collecting and analyzing user data and it is feasible to use Meta’s data and algorithms to identify and restrict improper sexual solicitation, exploitation, and abuse by adult users.

250. Moreover, it is reasonable for parents to expect that platforms such as Instagram, which actively promote its services to minors, will undertake reasonable efforts to identify users suffering from mental injury, self-harm, or sexual abuse and implement technological safeguards to notify parents by text, email, or other reasonable means that their child is in danger.

251. As a proximate result of these dangerous and defective design attributes of Meta’s product, Alexis Spence suffered severe mental harm. Plaintiffs did not know, and in the exercise of reasonable diligence could not have known, of these defective design in Meta’s product until 2021.

1           252. As a result of these dangerous and defective design attributes of Meta’s product,  
2 Plaintiffs Kathleen and Jeffery Spence, have suffered emotional distress and pecuniary hardship  
3 due to their daughter’s mental harm resulting from her social media addiction.

4           253. Meta is further liable to Plaintiffs for punitive damages based upon the willful and  
5 wanton design of its product that was intentionally marketed and sold to underage users, whom  
6 they knew would be seriously harmed through their use of Instagram.

7                   **COUNT II – STRICT PRODUCT LIABILITY (Failure to Warn)**

8           254. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 253  
9 as if fully stated herein.

10           255. Meta’s product is defective because of inadequate instructions or warnings because  
11 the foreseeable risks of harm posed by the product could have been reduced or avoided by the  
12 provision of reasonable instructions or warnings by the manufacturer and the omission of the  
13 instructions or warnings renders the product not reasonably safe. This defective condition rendered  
14 the product unreasonably dangerous to persons or property, existed at the time the product left  
15 Meta’s control, reached the user or consumer without substantial change in the condition in which  
16 it was sold, and was a cause of Plaintiffs’ injury.

17           256. Meta’s product is unreasonably dangerous and defective because it contains no  
18 warning to users or parents regarding the addictive design and effects of Instagram.

19           257. Meta’s social media product relies on highly complex and proprietary algorithms  
20 that are both undisclosed and unfathomable to ordinary consumers, who do not expect that social  
21 media platforms are physically and/or psychologically addictive.

22           258. The magnitude of harm from addiction to Meta’s product is horrific, ranging from  
23 simple diversion from academic, athletic, and face-to-face socialization to sleep loss, severe

depression, anxiety, self-harm, and suicide.

259. The harms resulting from minors' addictive use of social media platforms have been not only well-documented in the professional and scientific literature, but Meta had actual knowledge of such harms.

260. Meta's product is unreasonably dangerous because it lacks any warnings that foreseeable product use can disrupt healthy sleep patterns or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours. Excessive screen time is harmful to adolescents' mental health and sleep patterns and emotional well-being. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

261. It is feasible for Meta's product to report the frequency and duration of their minor users' screen time to their parents without disclosing the content of communications at negligible cost, whereas parents' ability to track the frequency, time and duration of their minor child's social media use are better situated to identify and address problems arising from such use and to better exercise their rights and responsibilities as parents.

262. Meta knew about these harms, knew that users and parents would not be able to safely use its product without warnings, and failed to provide warnings that were adequate to make the product reasonably safe during ordinary and foreseeable use by children.

263. As a result of Meta's failure to warn, Alexis Spence suffered severe mental harm, leading to physical injury from her use of Instagram.

264. As a result of Meta's failure to warn, Plaintiffs Jeffery and Kathleen Spence, have suffered emotional distress and pecuniary hardship due to their daughter's mental harm resulting

Instagram product.

272. Meta was negligent in failing to conduct adequate testing and failing to allow independent academic researchers to adequately study the effects of its product and levels of problematic use amongst teenage users. Meta has extensive internal research indicating that its product is harmful, causes extensive mental harm and that minor users are engaging in problematic and addictive use that their parents are helpless to monitor and prevent.

273. Meta is negligent in failing to provide adequate warnings about the dangers associated with the use of social media products and in failing to advise users and their parents about how and when to safely use its social media platform and features.

274. Meta is negligent in failing to fully assess, investigate, and restrict the use of Instagram by adults to sexually solicit, abuse, manipulate, and exploit minor users of its Instagram product.

275. Meta is negligent in failing to provide users and parents the tools to ensure its social media product is used in a limited and safe manner by underage users.

276. As a result of Meta's negligence, Alexis Spence suffered severe mental harm from her use of Instagram.

277. As a result of Meta's negligence, Plaintiffs Jeffery and Kathleen Spence have suffered emotional distress and pecuniary hardship due to their daughter's mental harm resulting from social media addiction.

278. Meta is further liable to Plaintiffs for punitive damages based upon its willful and wanton conduct toward underage users, including Alexis Spence, whom they knew would be seriously harmed through the use of its social media product.

**COUNT IV - VIOLATIONS OF CALIFORNIA’S UNFAIR COMPETITION LAW**

**(Cal. Bus. & Prof. Code §§ 17200, *et seq.*)**

279. Plaintiff realleges each and every allegation contained in paragraphs 1 through 278 as if fully stated herein.

280. Defendant Meta is a corporation, and thus a “person,” as defined by California Business & Professions Code § 17201.

281. The UCL prohibits all conduct that is unlawful, unfair, or fraudulent.

282. Defendant’s conduct is unlawful as set forth in Counts I–III, above.

283. Defendant engaged in fraudulent and deceptive business practices in violation of the UCL by promoting products to underage users, including Alexis Spence, while concealing critical information regarding the addictive nature and risk of harm these products pose. Defendant knew and should have known that its statements and omissions regarding the addictive and harmful nature of its product were misleading and therefore likely to deceive the members of the public who use Defendant’s product and who permit their underage children to use Defendant’s product. Had Kathleen Spence known of the dangerous nature of Defendant’s product, she would have taken early and aggressive steps to stop or limit her daughter’s use of Defendant’s product.

284. Defendant’s practices are unfair and violate the UCL because they offend established public policy, and because the harm these practices cause to consumers greatly outweighs any benefits associated with them.

285. Defendant’s conduct has resulted in substantial injuries that Plaintiffs could not reasonably have avoided because of Defendant’s deceptive conduct. This substantial harm is not outweighed by any countervailing benefits to consumers or competition.

286. As a direct and proximate result of the foregoing acts and practices, Defendant has

received, or will receive, income, profits, and other benefits, which it would not have received if it had not engaged in the violations of the UCL described herein. As a direct and proximate result of the foregoing acts and practices, Defendant has also obtained an unfair advantage over similar businesses that have not engaged in such practices.

287. As a result of Defendant's UCL violations, Plaintiffs have suffered injury in fact and lost money as set forth herein.

288. Accordingly, Plaintiffs seek injunctive and equitable relief to halt and remedy Defendant's unlawful, fraudulent, and unfair conduct.

#### **COUNT V – UNJUST ENRICHMENT**

289. Plaintiff realleges each and every allegation contained in paragraphs 1 through 288 as if fully stated herein.

290. As a result of Defendant's conduct detailed herein, Defendant received a benefit. Because Defendant's advertising profits are directly tied to the number of user accounts and the amount of time those users spend on Instagram, Defendant benefited directly from Alexis Spence's problematic use of its product, both from the amount of time she spent on Instagram and from her creation of multiple Instagram accounts.

291. It would be unjust and inequitable for Defendant to retain the ill-gotten benefits at Plaintiffs' expense, in light of Defendant's acts and omissions described herein.

292. Accordingly, Plaintiffs seek damages in an amount to be proven at trial.

#### **COUNT VI – INVASION OF PRIVACY**

##### **(California Constitutional Right to Privacy, Cal. Const. Art. 1, § 1)**

293. Plaintiff realleges each and every allegation contained in paragraphs 1 through 292 as if fully stated herein.

7. For the reasonable costs and attorney and expert/consultant fees incurred in this action.
8. For injunctive relief.
9. For such other and further relief as this Court deems just and equitable.

DATED this 6<sup>th</sup> day of June 2022.

*Attorneys for Plaintiffs*

UNITED STATES DISTRICT COURT  
 NORTHERN DISTRICT OF CALIFORNIA  
 SAN FRANCISCO DIVISION

CN and CANDACE WUEST,

Plaintiffs,

v.

META PLATFORMS, INC., formerly  
 known as FACEBOOK, INC.,

Defendant.

Case No. \_\_\_\_\_

COMPLAINT FOR PERSONAL  
 INJURIES

JURY DEMAND

“In these digital public spaces, which are privately owned and tend to be run for profit, there can be tension between what’s best for the technology company and what’s best for the individual user or for society. Business models are often built around maximizing user engagement as opposed to safeguarding users’ health and ensuring that users engage with one another in safe and healthy ways. . . .”

*Protecting Youth Mental Health*, The U.S. Surgeon General’s Advisory (December 7, 2021)

Plaintiffs CN and her mother, Candace Wuest, bring this action for personal injury and loss of consortium against Meta Platforms, Inc., formerly known as Facebook, Inc. (“Facebook”), doing business as Instagram (“Instagram”) (collectively, “Meta”), and allege as follows:

**I. INTRODUCTION**

**A. Plaintiffs’ Claims**

1. This product liability action seeks to hold Defendant Meta’s Instagram product responsible for causing and contributing to burgeoning mental health crisis perpetrated upon the

1 children and teenagers of the United States by Meta and, specifically for the injuries it caused CN  
2 beginning in 2016, when CN was only twelve years old. Those injuries, proximately caused by  
3 Meta’s unreasonably dangerous Instagram social media product, include but are not limited to  
4 addiction, anxiety, depression, eating disorders, suicide attempts, and long-term mental and  
5 physical harms that will forever impact CN’s life.

6         2. Meta’s Instagram social media product likewise caused foreseeable harms to  
7 Plaintiff Candace Wuest. Candace took affirmative steps to protect her daughter and was unaware  
8 that Meta’s Instagram product was addictive and harmful. Candace was emotionally, financially,  
9 and physically harmed by Meta’s addictive design and its continued development and distribution  
10 of inherently harmful and dangerous social media products to her child. Moreover, the harms  
11 suffered by Candace Wuest—and millions of other parents across the U.S.—were not just  
12 foreseeable but, in many cases, Meta anticipated that these precise harms would happen to some  
13 portion Instagram users and their families because of Meta’s product design and decisions.

14         3. Plaintiffs’ harms were all caused by CN’s exposure to and use of Meta’s  
15 unreasonably dangerous and defective social media product, Instagram. CN was 12 years old when  
16 she opened her first Instagram account, which was initially used for safety and communication  
17 purposes. However, Meta’s addictive design, harmful social comparison product features, and  
18 engagement-based recommendation systems led CN down a deadly rabbit hole. In Meta’s own  
19 words, it created a “perfect storm” of addiction, social comparison, and exposure to incredibly  
20 harmful content and product features, then operated its algorithms to push and promote harmful  
21 content via CN’s Feed, Explore, Stories, and Reels features.

22         4. At all times relevant to this complaint, Meta programmed and operated its product  
23 to prioritize engagement over user safety. Meta put its profits ahead of human life in a deliberate  
24 and systematic manner, pushing forward with its engagement-first business model even when  
25 Meta’s own research confirmed that its product design and selected system settings were exposing  
26 children like CN to incredible harms, to the point of causing and/or contributing to suicide in a  
27 profoundly significant number of young Instagram users.

28         5. Plaintiffs suffered several emotional, physical, and financial harms as a result—all

of which are a symptom of the current health crisis among American youth caused by certain harmful social media products, specifically in this case, Instagram.

**B. Meta's Internal Documents Targeting Children**

6. In late 2021, a Facebook whistleblower disclosed thousands of internal Meta documents to the United States Securities Exchange Commission (the "SEC") and Congress. The Facebook Papers prove known dangerous designs and design defects as well as operational decisions and calculations, and a causal relationship between use of Defendants' various social media products in their current form and resulting addiction, anxiety, depression, eating disorders, exploitation and grooming, and what Meta internally refers to as "SSI" (Suicide and Self Injury). The Facebook Papers prove known dangerous designs and design defects.

7. The Facebook Papers prove that Meta was aware of the harms its Instagram product was causing and made calculated business decisions to reject reasonable safety recommendations, based on Meta's determination that making its product safer for children and teens would result in decreased engagement and advertising revenue. At all times relevant to this case, Meta knew that children like CN and parents like Candace Wuest would be harmed because of its Instagram product and in the precise manner CN and Candace Wuest were harmed. Meta leadership repeatedly made the deliberate decision to stay the course with their addictive and inherently dangerous and defective products, to the detriment of millions of American teens and families.

8. The Facebook Papers have been referred to in published articles and there are many examples of the Facebook Papers themselves being published, with more being published every day. The following are just two examples,

9. The Wall Street Journal and Digital Wellbeing published several of the Facebook Papers in November 2021,<sup>1</sup> including but not limited to,

- a. Social Comparison: Topics, celebrities, Like counts, selfies [Jan 2021 internal document reporting findings from a 9-country user survey (n=100,000) in Australia, Brazil, France, Germany, Great Britain, India, Japan, Korea, USA].

---

<sup>1</sup> <https://digitalwellbeing.org/the-facebook-files-on-instagram-harms-all-leaked-slides-on-a-single-page/>

- b. Appearance-based Social Comparison on Instagram [Feb 2021 internal document reporting finding from a 10-country user survey (n=50,590) across Australia, Brazil, France, Germany, Great Britain, India, Japan, Korea, Mexico, USA].
- c. Mental Health Findings: Deep dive into the reach, intensity, Instagram impact, self-reported usage and support of mental health issues [2019 internal document reporting findings from a 6-country user survey (n=22,410) across Brazil, India, Indonesia, Japan, Turkey, USA].
- d. Teen Mental Health Deep Dive [2019 internal document reporting findings from a 2-country (UK and US) qualitative research study (n = 40 in-person interviews, with follow-up video calls (n = 8) with young Instagram users (aged 13-17), supplemented by online survey (n = 2,503)].
- e. Teens and Young Adults on Instagram and Facebook [2021 internal document reporting findings from a five-country study (Australia, France, Great Britain, Japan, USA) with user data].

10. Gizmodo has been publishing the Facebook Papers, several at a time, also starting in November 2021,<sup>2</sup> including but not limited to,

- a. Why We Build Feeds
- b. Is Ranking Good
- c. Big Levers Ranking Experiment
- d. [LAUNCH] Civic Ranking: Engagement-Based Worth Your Time
- e. MSI Metric Note Series

1 These documents and all other Facebook Papers that come to light after the filing of this Complaint  
2 are incorporated by reference into this Complaint. The sole reason Plaintiffs do not attach all such  
3 documents is length and file size. However, the contents of these documents and other Facebook  
4 Papers are material to Plaintiffs' claims and Plaintiffs believe that the public has a right to know.

5 11. On information and belief, Meta has knowledge about the harms its products cause  
6 users, particularly teen, child, and other vulnerable user populations, and continues to operate those  
7 products in a harmful and dangerous manner anyway and in the interest of competitive advantage  
8 and increasing its already astronomical profits. Moreover, only a small fraction of relevant Meta  
9 documents has been disclosed. Plaintiffs anticipate literal truckloads of additional evidence that  
10 will support these claims and show precisely what Meta done in the name of corporate greed.

11 12. Meta has actual knowledge that children under the age of 13 are using its social  
12 media products; that its social media products are highly addictive and harmful to a significant  
13 population of all users, but especially teens and children; that certain design features that serve no  
14 functional, informational, societal, or educational purpose (for example, "likes") are causing harm  
15 to users, but especially teens and children; and that algorithms and algorithm-driven product  
16 features are dangerous and harmful by design and as designed. Meta knew about these harms,  
17 could have made its Instagram product safer at minimal expense, and opted to stay the course  
18 instead and to increase user engagement and already astronomical revenue.

19 13. Despite knowledge of the dangerous and harmful characteristics of its product,  
20 Meta has made and continues to make calculated cost-benefit business decisions and is consistently  
21 prioritizing their already astronomical profits over human life.

22 14. The harms at issue in this case all arise from Defendants' product designs and/or  
23 inadequate warnings.

### 24 **C. The Social Media Epidemic Among Children**

25 15. On December 7, 2021, the United States Surgeon General issued an advisory  
26 cataloging a dramatic increase in teen mental health crises including suicides, attempted suicides,  
27 eating disorders, anxiety, depression, self-harm, and inpatient admissions. Between 2007 and  
28 2018, for example, suicide rates among youth ages 12 to 16 in the U.S. increased a staggering 146

1 percent. Several cities across the United States have been experiencing teen suicide rates in the  
2 range of 1 every year or other year, which is an absolute crisis for our country—the death by  
3 suicide of a child is something that should be an exception and not a rule. The incidence of serious  
4 depression and dissatisfaction with life in this age group has likewise increased dramatically, and  
5 there is no question that these harms relate in no small part to companies like Meta.

6 16. The most significant and far-reaching change to the lives of young people in the  
7 last ten years has been the widespread adoption of social media platforms and prominently, for  
8 purposes of this lawsuit, the Instagram product which launched in 2010 and was acquired by  
9 Facebook (now Meta) in 2012, and which is designed and distributed by Meta.

10 17. By 2018, an estimated 63% of all children in the United States aged 13 to 14 and  
11 78% of all children in the United States aged 15 to 17 used Instagram specifically. Current  
12 estimates put the total number of all US teens using Instagram at 76%.

13 18. Current estimates put the number of teen Instagram users in the US over 20 million  
14 – in other words, there are more than 20 million at-risk teen Instagram users in the U.S. alone.

15 **D. Disparities Between Meta’s Public Statements and Internal Research on Harm to**  
16 **Children**

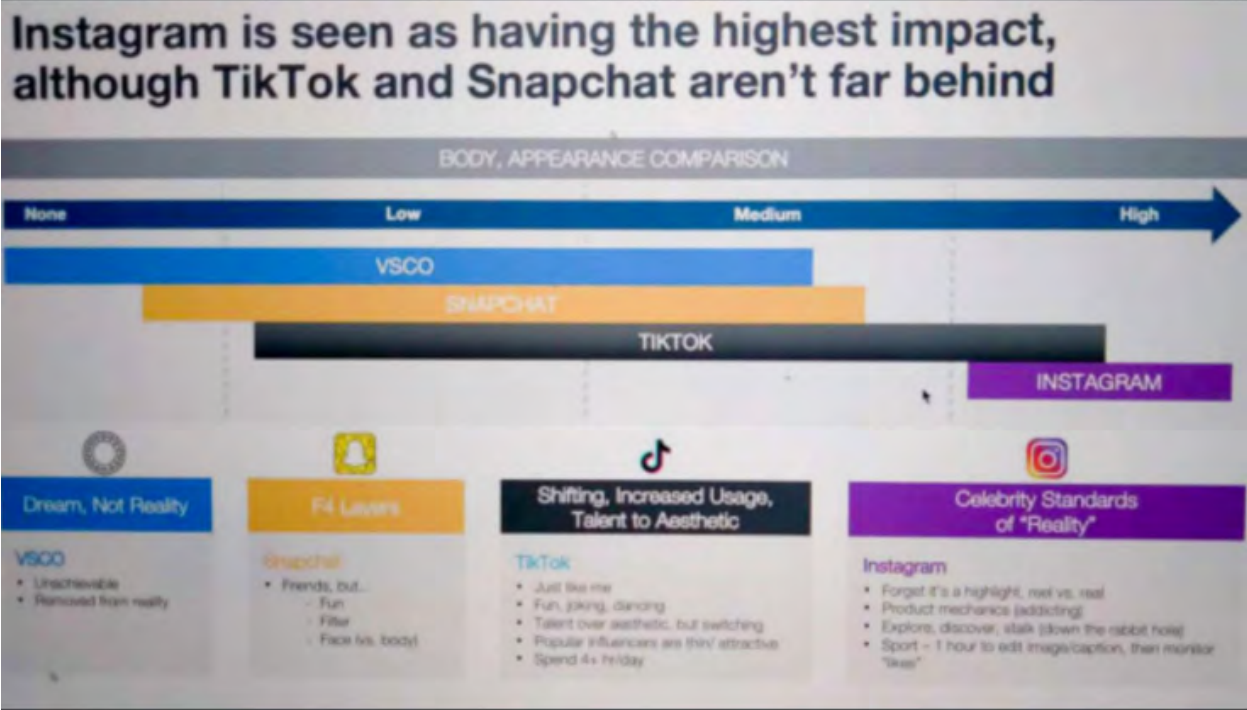

17 19. Peer reviewed studies and available medical science have also identified a  
18 particular type of social media and electronic device use associated with major mental health  
19 injuries, including depression, self-harm, eating disorders, suicide attempts and ideation,  
20 dissatisfaction with life, depression, and sleep deprivation. Large observational studies and  
21 experimental results also point to heavy use of certain social media products as the cause of  
22 increased depression, suicidal ideation, and sleep deprivation among teenagers, particularly  
23 teenage girls. Again, Meta has spent years publicly denying these findings—while internally  
24 confirming them.

25 20. Specifically, Meta leadership has vehemently denied that its products are harmful  
26 or addictive. Meta has gone to great lengths to assure the world that its social media products are  
27 safe. Even its Terms of Use (effective January 4, 2022) represent that Meta is “Fostering a positive,  
28 inclusive, and safe environment,” and that Meta uses its “teams and systems ... to combat abuse

1 and violations of our Terms and policies, as well as harmful and deceptive behavior. We use all  
2 the information we have—including our information—to try to keep our platform secure.”  
3 (Effective January 4, 2022). However, Meta’s own internal research and “experiments” show the  
4 opposite. The Facebook Papers include years’ worth of studies and reports, often referred to by  
5 Meta as “experiments,” discussing the fact that Meta’s social media products are addictive and  
6 harmful, and that use of those products can and does lead to serious mental health issues in a  
7 significant number of users, including things like anxiety, depression, eating disorders, and what  
8 Meta refers to as Suicide and Self Injury (or, SSI). The following are just a few examples.

9       21. The Facebook Papers, however, include years’ worth of studies and reports  
10 discussing the fact that Meta’s social media products are addictive and harmful, and that use of  
11 those products can and does lead to serious mental health issues in a significant number of users,  
12 including things like anxiety, depression, eating disorders, and SSI. This includes research  
13 confirming that higher engagement (*i.e.* more sessions and/or time spent over a certain threshold)  
14 causes higher negative effect for users, and other hallmarks of addiction (referred to by Meta as  
15 “problematic use”). In late 2019, Meta conducted an “exploratory study” in the United States,  
16 aimed at examining “Teen Girls Body Image and Social Comparison on Instagram.”<sup>3</sup> The resulting  
17 Power Point found that use of Defendants’ social media products made certain social comparison-  
18 based harms worse for a significant percentage of teen girls. *See, supra*, “Teen Girls Body Image  
19 and Social Comparison on Instagram – An Exploratory Study in the US,” p. 29 (referring to its  
20 own product mechanics as “addicting.”

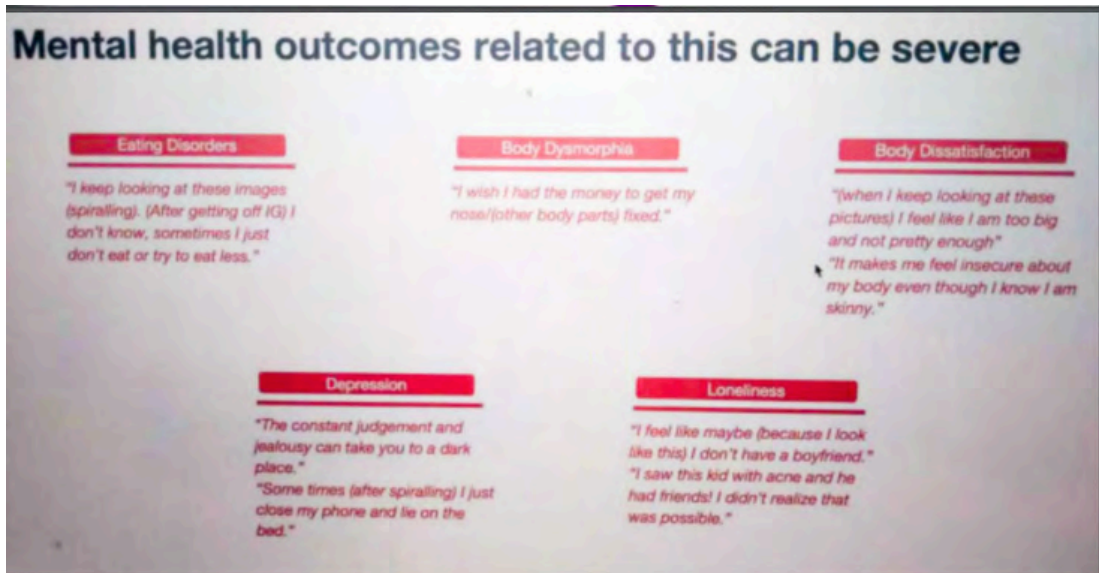

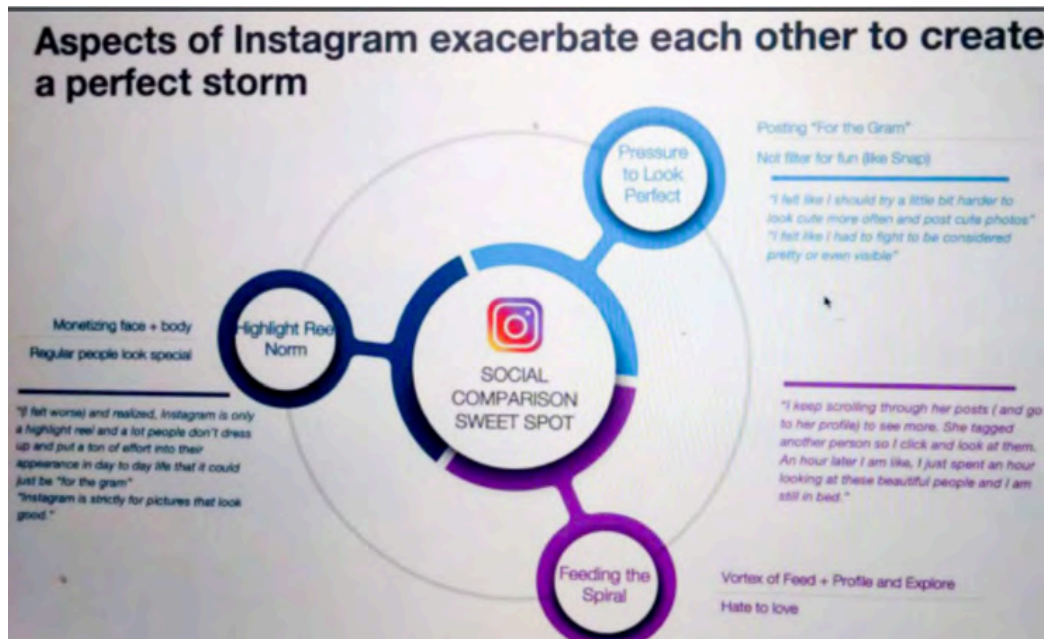

21  
22  
23  
24  
25  
26  
27  
28 <sup>3</sup> See <https://digitalwellbeing.org/wp-content/uploads/2021/10/Facebook-Files-Teen-Girls-Body-Image-and-Social-Comparison-on-Instagram.pdf>

*Id.* at p. 29, 30. More to the point, Meta knows that “Aspects of Instagram exacerbate each other to create a perfect storm.” *Id.* at p. 33 and 34. According to Meta, the “social comparison sweet

spot” (*id.*)—a place of considerable harm to users, particularly teens and teen girls—lies at the center of Meta’s product model and product features,

*Id.* at p. 33 and 34.

22. The user harms acknowledged in these slides relate, ultimately, to Meta product features like “Feed + Profile and Explore” (*id.*), filters, and teen-targeted marketing and accessibility. Meta refers to its “product mechanics” as “addicting” and recognizes that it is not certain body-focused celebrity content shown on Instagram causing harm, but rather, the sheer volume at which Meta’s social media product identifies and targets individual users (in particular,

1 teen girls) with that body-focused content. Indeed, this is not even content these users have  
2 searched for or, in many cases, want to see – but rather, it is content (including advertisements)  
3 Meta itself has programmed its product, algorithms, and other technologies to target at individual  
4 users as a means of increasing engagement and addiction; and, in turn, Meta’s revenue and  
5 competitive positioning. Meta knows exactly the harms that its products are causing to its teen  
6 users, yet Meta leadership has made the decision to stay focused on engagement and growth, at  
7 the expense of safety (aptly referred to by Meta as “Integrity”).

8       23. Meta also knows that its recommendations and other product features, like Feed  
9 and Explore, result in disproportionate harms to vulnerable users including children, teens, teen  
10 girls, and women (known as “algorithmic bias” and/or “algorithmic discrimination”)/ Yet Meta  
11 continues to reap astronomical profits at the expense of these users.

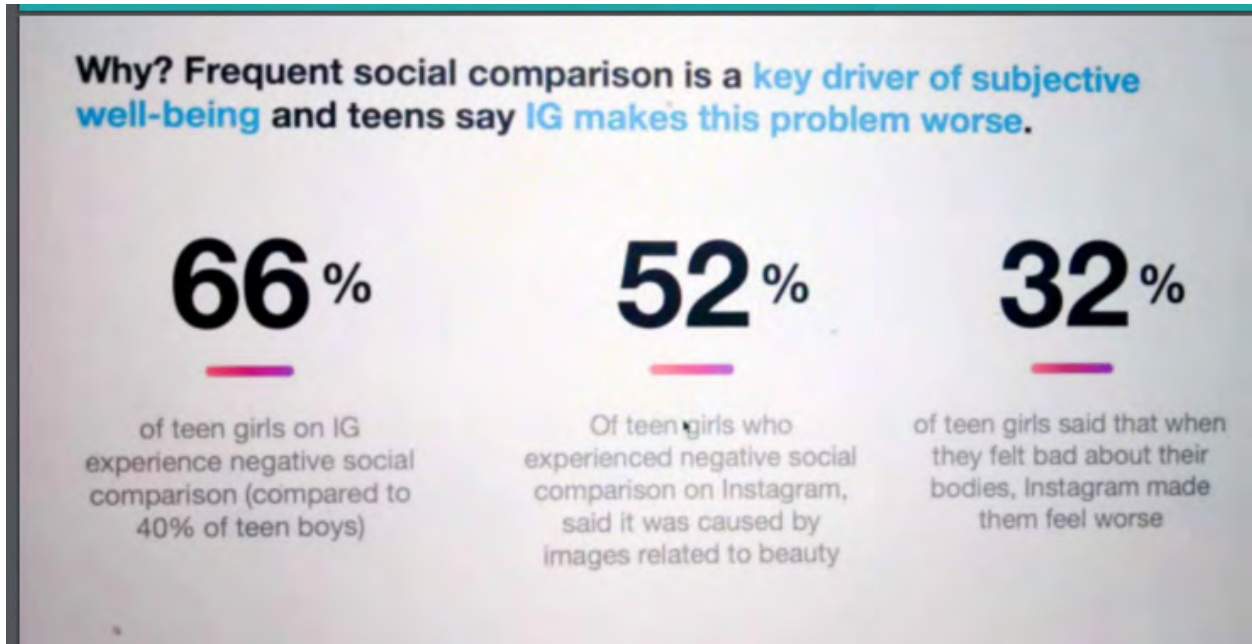

12       24. To name only one example, Meta knows that its algorithm is identifying and  
13 pushing harmful social comparison content to teen girls at significantly higher rates than what it is  
14 identifying and pushing to teen boys. Meta’s algorithm is discriminating in a manner that  
15 disproportionally targets girls between the ages of 13 and 17, as compared to similarly situated  
16 boys between the ages of 13 and 17. And Meta has no intention of stopping, because this  
17 discrimination has proven lucrative and until it is more expense for Meta to keep discriminating  
18 against young women it will continue to do so.

19       25. In the words of the Facebook Whistleblower, Meta is “morally bankrupt.”

20       26. Meta knows of several other product features that are harming its users, and which  
21 Meta could reasonably make safer – but where Meta has chosen engagement and growth over  
22 integrity every time. Another example is the “friend” recommendation product feature, which is a  
23 feature Meta has in both its Facebook and Instagram social media products. Meta knows that this  
24 feature is harmful to children in that it contributes to a significant amount of the grooming and  
25 exploitation that occurs on and because of Meta’s platforms. In other words, Meta affirmatively  
26 directs and connects predatory adult users who do not know and would not be able to find minors  
27 otherwise to Meta’s minor users via its recommendation algorithms, and vice versa (directing  
28 minors to adult users). Meta is aware of the harm this product is causing to a substantial number

of its minor users. However, Meta has refused to simply turn this function off for minor users – which it can easily do – because of other and more general findings that the more connections Meta can make for new users, the more likely those users are to keep using its product.

27. Meta’s own research has also been quite conclusive in determining that its teen, female users are disproportionately impacted by these products features and resulting harms,

*Id.* at p. 9.

28. According to an article published by the Wall Street Journal,<sup>4</sup>

For the past three years, Facebook has been conducting studies into [how its photo-sharing app affects its millions of young users](#).

Repeatedly, the company’s researchers found that Instagram is harmful for a sizable percentage of them, most notably teenage girls.

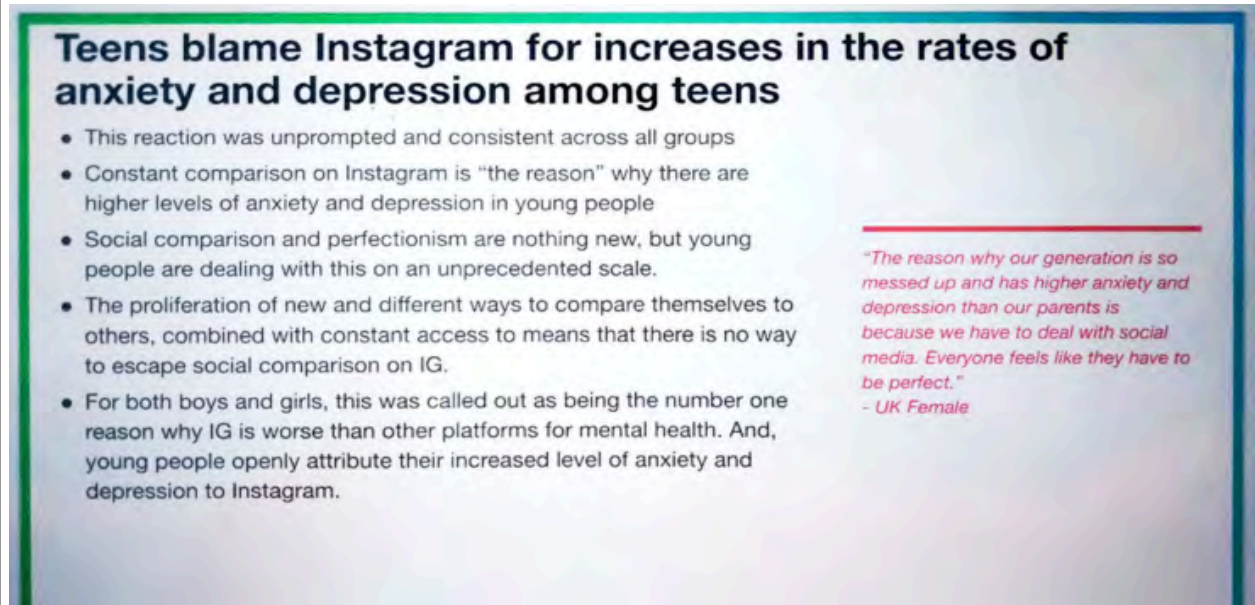

“We make body image issues worse for one in three teen girls,” said one slide from 2019, summarizing research about teen girls who experience the issues.

“Teens blame Instagram for increases in the rate of anxiety and depression,” said another slide. “This reaction was unprompted and consistent across all groups.”

Among teens who reported suicidal thoughts, 13% of British users and 6% of American users traced the desire to kill themselves to Instagram, one presentation showed.

<sup>4</sup> <https://www.wsj.com/articles/facebook-knows-instagram-is-toxic-for-teen-girls-company-documents-show-11631620739>

29. Meta documents also discuss the fact that “Constant comparison on Instagram is ‘the reason’ why there are higher levels of anxiety and depression in young people,”

*See, supra*, “Teen Mental Health Deep Dive,” p. 27. (October 10, 2019), at p. 53. As illustrated in the Facebook Papers, this constant and harmful social comparison is the result of social media’s design and operation, and not any one piece of content or interaction on its platform

30. Meta documents also report that 13.5% of teen girls on Instagram say that the platform makes thoughts of Suicide and Self Injury (SSI) worse; while 17% of teen girls on Instagram say that the platform makes “Eating Issues” (e.g. anorexia and bulimia) worse,

See, <https://digitalwellbeing.org/the-facebook-files-on-instagram-harms-all-leaked-slides-on-a-single-page/>, Slide 14 of “Hard life moment – mental health deep dive.”

31. Meta knows that its product is contributing to teen depression, anxiety, even suicide and self-harm. Why doesn't it change these harmful product features and stop utilizing algorithms in connection, at least, with teen accounts? Because Meta's priority is growth and competition concerns, and it sees “acquiring and retaining” teens as essential to its survival. As made clear in the Facebook Papers, teenagers spend significantly more time on social media than adults (both total time and user sessions—which are usage patterns Meta links to addiction), represent Meta's greatest (if not only) growth opportunity in the US, and can be used by Meta to recruit older and younger family members and friends.

32. Meta also knows that its Instagram product is widely used by pre-teens under the age of 13. Despite it being illegal for Meta to knowingly permit persons under the age of 13 to use its platform, Meta has spent millions (if not billions) of dollars over the last decade studying “tweens” to determine how to make its product more appealing to and increase engagement among them. Meta sees children under 13 as a tappable and valuable market, which it must capture and use to increase revenue and ensure competitive positioning in the long-term.

33. For Meta, young users are a priority demographic, and Meta leadership will do anything to increase and maintain engagement. Indeed, on October 26, 2021, the New York Times reported on a 2018 internal Meta marketing report lamenting loss of teenage users to competitors’ platforms as “an existential threat.”<sup>5</sup>

34. Meta spends billions on these efforts, going so far as to identify vulnerabilities and other areas where it can adjust its products and approach to appeal more to the teen demographic. For example, in December of 2021, Insider reported on an internal Meta document titled “The Power of Identities: Why Teens and Young Adults Choose Instagram.” It is clear from this document that Meta, and its competitors, are marketing to children and teens – including in ways meant to exploit the differences between teens and adults.

35. Identified among Meta’s internal documents are other product features that cause harm to teen users, which product features are relatively standard among Defendants’ products. For example, product features that enable users to like or love other user’s content results in increased addiction and social comparison harms, which Meta considered hiding for the benefit of its users (referred to as “Project Daisy”) but ultimately did not.<sup>6</sup>

36. In May 2022, Instagram head Adam Mosseri told reporters that that research he had seen suggests the app’s effects on teen well-being is likely “quite small.”<sup>7</sup> Upon information and belief, Mr. Mosseri’s statement was false and Meta leadership, including Mr. Mosseri, has been made aware of the significant and far-reaching effects of Instagram on teen well-being.

---

<sup>5</sup> <https://www.nytimes.com/2021/10/16/technology/instagram-teens.html>

<sup>6</sup> See <https://www.nytimes.com/2020/01/17/business/instagram-likes.html>

<sup>7</sup> <https://www.wsj.com/articles/facebook-knows-instagram-is-toxic-for-teen-girls-company-documents-show-11631620739>

The features that Instagram identifies as most harmful to teens appear to be at the platform's core.

The tendency to share only the best moments, a pressure to look perfect and an addictive product can send teens spiraling toward eating disorders, an unhealthy sense of their own bodies and depression, March 2020 internal research states. It warns that the Explore page, which serves users photos and videos curated by an algorithm, can send users deep into content that can be harmful.

"Aspects of Instagram exacerbate each other to create a perfect storm," the research states.

The research has been reviewed by top Facebook executives, and was cited in a 2020 presentation given to Mr. Zuckerberg, according to the documents.

See <https://www.wsj.com/articles/facebook-knows-instagram-is-toxic-for-teen-girls-company-documents-show-11631620739> (to name only one example).

37. In a more recent interview, Mr. Mosseri said that some features of Instagram could be harmful to some users, and they aren't easily addressed.<sup>8</sup> This statement was also false, as Meta's leadership, including Mr. Mosseri, have been presented with numerous recommendations from Meta's employees and even teens themselves as to how they could easily make the Instagram product safer for children and teens. Examples of this include but are not limited to things such as,

- a. Verification of age and identify for all users.
- b. Email verification for all users.
- c. Not allowing multiple accounts.
- d. Not allowing public profiles for minors, or defaulting minors to private ones.
- e. Not allowing direct messaging with minors, or not allowing direct messaging with minors and persons not on their “friends” list.
- f. Turning off recommendation algorithms for minor accounts.
- g. Turning off content algorithms for minor accounts.
- h. Reducing amount of certain content categories Meta’s algorithms identify and direct to minor users (where Meta has determined that even a small reduction to quantity would have a large impact for users, and where Meta can make such a change essentially by turning a level on its current settings).
- i. Not creating, approving, and directing harmful advertisements to minors.

<sup>8</sup> *Id.*

- j. Adoption of SSI (Suicide and Self-Injury) tools Meta employees have recommended and, again, that Meta could implement on a unilateral basis and that would reduce the incidence of SSI caused by Instagram.

38. Meta knows that teens are more vulnerable and suffer harms from use of the Instagram social media product at higher rates than adult Instagram users. At the same time, however, teens access social media longer and more often than adults. Advertisers are willing to pay a premium for unfettered access to child and teens so Meta, in turn, works hard to make its Instagram social media product as appealing to teens as possible, even though it is harmful to teens.

#### **E. Meta’s Singular Focus on Profits Over Safety**

39. Meta knows the harmful impact its products have. Instead of warning users and/or re-designing its product to make it safer, however, Meta senior leadership conducts extensive economic calculations and chooses enhancing profits over protecting human life.

40. Meta knows that large numbers of its users are “addicted” to its social media products. Indeed, the problematic use identified in medical literature is precisely the type of use Meta has designed its product to encourage through psychological manipulation techniques—sometimes referred to as persuasive design—that is well-recognized to cause all the hallmarks of clinical addiction.

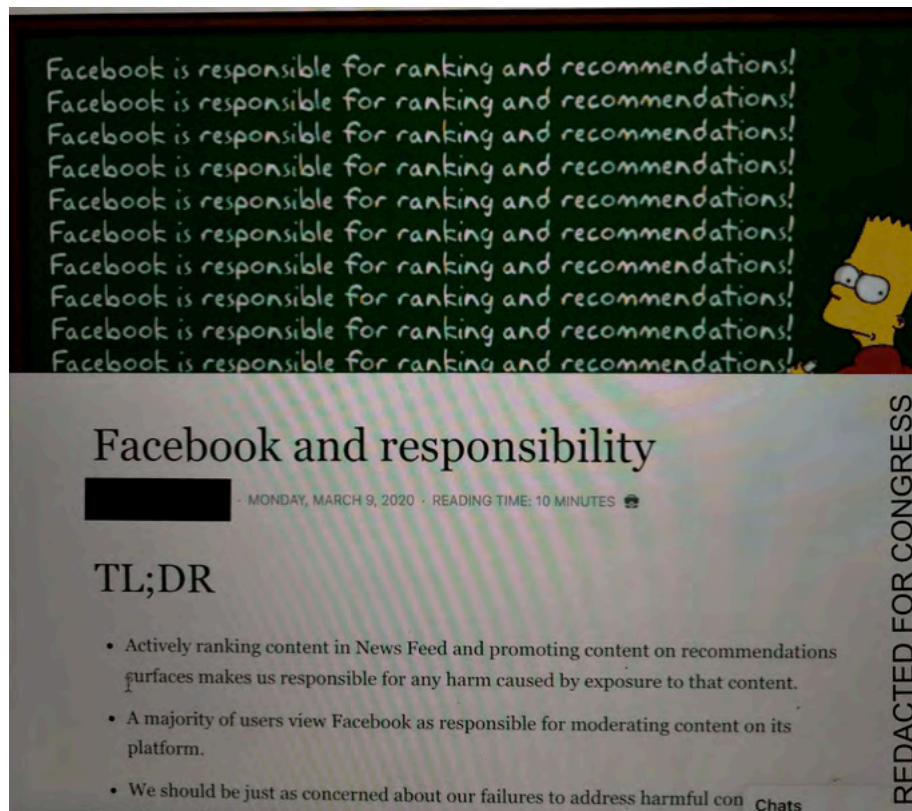

41. Meta also slowly switched its News Feed (in its Facebook and Instagram products) from maximizing time-spent to maximizing sessions, even though it knew that maximizing sessions is harmful to its users.

42. Meta likewise knows that its “like” button causes harmful social comparison, and results in anxiety and depression in teens. Meta has tested and proved these theories and is aware of product fixes that would cost Meta virtually nothing but that, in turn, would reduce the harms to Meta’s teen users – users like CN. But Meta leadership refused such changes due to the potential for decreased revenues from advertisers and influencers. In other words, Meta made a calculated business decision and chose profits over human life.

43. Meta likewise engages in a constant cost-benefit analysis when it comes to user safety vs. engagement—with engagement winning every time. For example, Meta does not

incorporate reasonable and necessary safety protocols and checks into its design and development processes. It also then fails to make its product and product features safer after concerns are voiced and/or actual harms are known. It opts instead for profits and engagement, consistent with its well-known motto, “Move fast and break things.” On information and belief, there will be multiple examples of this once discovery is had in this case.

44. One example of this is document titled “Facebook and Responsibility,” in which a Meta employee writes “Actively ranking content in News Feed and promoting content on recommendations surfaces makes us responsible for any harm caused by exposure to that content,” and “We should be just as concerned about our failures to address harmful content as we are about collateral damage from false positives ...”—i.e. the degree to which users are harmed by having their content mistakenly identified as violating and taken down. *See, supra*, published at [https://www.documentcloud.org/documents/21594152-tier2\\_rank\\_other\\_0320](https://www.documentcloud.org/documents/21594152-tier2_rank_other_0320).

## TL;DR

- Actively ranking content in News Feed and promoting content on recommendations surfaces makes us responsible for any harm caused by exposure to that content.
- A majority of users view Facebook as responsible for moderating content on its platform.
- We should be just as concerned about our failures to address harmful content as we are about collateral damage from false positives and demotion policies should be set according to cost/benefit tradeoffs for users.
- There is room for additional and/or stronger integrity enforcements to reduce viewership of harmful content.

## What responsibility does Facebook bear for the content users see on Facebook?

The main keys to responsibility are the **actions that we choose to take** and the **actions that we are capable of taking**. This note is a review of internal and external research addressing Facebook's perceived responsibility for moderating content on its platform. Two perspectives are worth considering: the **responsibility Facebook actually bears** and **users' perceptions of Facebook's responsibility**.

## Responsibility from the ethicists' point of view

Facebook is most active in delivering content to users on recommendation surfaces like "Pages you may like," "Groups you should join," and suggested videos on Watch. These are surfaces where Facebook delivers unconnected content. Users don't opt-in to these experiences by following other users or Pages. Instead, Facebook is actively presenting these experiences, and according to ethicists, is therefore entirely responsible if these experiences are harmful. Here, many ethicists would advocate a policy of "first, do no harm." With millions of positive and valuable Pages, Groups, and videos on Facebook, there's really no excuse for recommending harmful content. In this spirit, Facebook's new non-recommendable content policies aim to more-aggressively remove harmful content from recommendation surfaces, including the removal of "borderline" content from these surfaces (wiki, post).

News Feed ranking is another way Facebook becomes actively involved in these harmful experiences. Of course users also play an active role in determining the content they are connected to through feed, by choosing who to friend and follow. Still, when and whether a user sees a piece of content is also partly determined by the ranking scores our algorithms assign, which are ultimately under our control. This means, according to ethicists, **Facebook is always at least partially responsible for any harmful experiences on News Feed.**

**We are just as responsible for our failures to address harmful content as we are for false positives.** To minimize our responsibility for harm caused to users by content on Facebook, demotion thresholds and strengths should be based on a cost-benefit analysis of user value that weights false negative rates against false positive rates, and the harms experienced by users from exposures and integrity actions. Generally, we should be as aggressive as possible in enforcing against harmful content without depriving people of valuable or important content.

Currently, there are places where it appears we could be doing more to prevent users from being exposed to harmful content, yet don't. For instance, the Feed Enforcement team recently launched a new class of "p(violating)" demotions. These are demotions where the strength of the demotion is designed to be proportional to the probability that a content violates a Community Standard: a post with a 10% probability is demoted 10%, another with a 50% probability of violating is demoted at 50%, and so forth. A 50% demotion cuts a posts' ranking score in half, so in order to appear before another, a post with 50% demotion would have to have originally had twice its score. And a post with a 99% demotion would have to have originally had 100 times its ranking score. However, we currently cap p(violating) demotions at 50% strength. This is because we are not transparent with the posters of demoted content, so the worry is that a 99% demotion might be equivalent to a "shadow ban," reducing viewership nearly as much as a removal, but without any transparency or recourse for the poster. These transparency concerns are clearly legitimate, but it means there will be cases where we are 99% certain a post is violating, yet we nevertheless continue showing it in users' Feeds because we are only demoting it at 50%. One solution might be to complement p(violating) demotions with warning screen treatments for highly-probable violations.

45. In other words, Meta is perfectly capable of enforcing its own Terms of Service, Community Standards, and other guidelines. It can adjust controls in a manner that would better protect its users, especially children and teens, from certain, significant harms caused by Meta's user setting options, recommendations, and other algorithmic-driven product features. Yet, Meta repeatedly conducts its engagement-driven, cost-benefit analysis and repeatedly chooses profit over human life. That is not a choice Meta has the right to make.

46. Nor does Meta intend to make the changes necessary to protect young users. For example, after the Facebook Whistleblower came forward and the first products liability lawsuits were filed, Meta began making small product changes, in an effort to minimize the impact of the truth about the harmfulness of its products. But Meta's new claims of prioritizing user safety are as false as the prior ones. The following are just some examples.

47. Meta now claims that it requires age verification, which claim is misleading. Meta simply asks its users to input their birthdate, as it did upon opening of the account. This form of "verification" is no more effective than it was the first time. Meta is unwilling to actually verify age and identification, however, as this would prevent anyone under the age of 16 from opening

an account without parental consent and would stop those same users from opening multiple accounts – which would have significant impact on Meta’s engagement numbers and resulting revenue. It would also decrease engagement among predatory users, as many would not sign up for fear of getting caught and those who did would be easier to identify.

48. Meta also claims that it has parental controls in place, which “parental controls” Meta knows to be ineffective. For example,

- a. Parental controls do not work when users open accounts without their parents’ knowledge or consent (which is many if not most teen users);
- b. Parental controls do not work when users open FINSTAS (or secret, secondary accounts) which their parents do not know about, which again, refers to more than half of all teens using Meta’s Instagram product.
- c. Parental controls do not work because, as Meta also knows, most parents do not understand how to use Meta’s social media products in the first place, and cannot or do not use what they do not understand. *See, supra*, “Teen Mental Health Deep Dive” (p. 50),

### **At the same time, parents can’t understand and don’t know how to help**

- Today’s parents came of age in a time before smartphones and social media, but social media has fundamentally changed the landscape of adolescence.
- Social media amplifies many of the age-old challenges of being a teenager.
- The always-on nature of social media means that teens’ social lives have infiltrated into every part of life without a break.
- Sharing more parts of life means more points of comparison.

“Talking to your family doesn’t help because they can’t understand and don’t get what you need. How are you going to tell the people who **literally gave you life** that you don’t want it anymore?”  
– UK Female

That is, actual user safety requires implementing more than just a tool aimed at putting safety in the hands of parents, since most do not understand the tool or know it exists in the first place.

- d. Whatever the reason for parents not using parental controls, that misses the point entirely – which is that Meta does not have the right to distribute inherently dangerous and defective products to children in the first place, and parental controls do not address harmful product features like algorithms and social comparison content, to name a few.

## **F. Overview of Claims**

49. Plaintiffs bring claims of strict liability based upon Meta’s defective design of its Instagram social media product that renders such product not reasonably safe for ordinary consumers or minor users. It is technologically feasible to design social media products that substantially decrease both the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Meta’s product with a negligible increase in production cost. In fact, Meta’s employees have made proposals for product changes time and time again, as is also proven by Meta’s internal documents, only for Meta controlling shareholder and CEO Mark Zuckerberg to refuse such changes based solely on the potential impact they might have to Meta’s engagement and revenue numbers. The following is from a Wall Street Journal article published September 15, 2021,<sup>9</sup>

Anna Stepanov, who led a team addressing those issues, presented Mr. Zuckerberg with several proposed changes meant to address the proliferation of false and divisive content on the platform, according to an April 2020 internal memo she wrote about the briefing. One such change would have taken away a boost the algorithm gave to content most likely to be reshared by long chains of users.

“Mark doesn’t think we could go broad” with the change, she wrote to colleagues after the meeting. Mr. Zuckerberg said he was open to testing the approach, she said, but “We wouldn’t launch if there was a material tradeoff with MSI impact.”

50. What’s clear from all of these reports and documents is that Meta and its

<sup>9</sup> <https://www.wsj.com/articles/facebook-algorithm-change-zuckerberg-11631654215>

competitors in the social media space *could* provide social media products that do not promote or amplify harmful content to teens and children – these companies simply choose to not do so as that would mean not relying on harmful algorithms and fewer billions of dollars in revenue.

51. Meta has consistently and knowingly placed its own profit over the health and welfare of its teen and child users, recognizing astronomical gains at their expense.

52. Plaintiffs also bring claims for strict liability based on Meta’s failure to provide adequate warnings to minor users and their parents of danger of mental, physical, and emotional harms arising from foreseeable use of its Instagram social media product. The addictive quality of Instagram and its harmful algorithms are unknown to minor users and their parents.

53. Plaintiffs also bring claims for common law negligence arising from Meta’s unreasonably dangerous Instagram social media product and its failure to warn of such dangers. Meta knew, or in the exercise of ordinary care should have known, that its social media product was harmful to a significant percentage of its minor users and failed to redesign its product to ameliorate these harms. Meta also failed to warn minor users and their parents of foreseeable dangers arising out of use of its Instagram product.

54. Meta’s own former and/or current developers often do not allow their own children and teenagers to use the Instagram product.<sup>10</sup> For many years, Meta has had actual knowledge that its Instagram social media product is dangerous and harmful to children but actively concealed these facts from the public and government regulators and failed to warn parents about this known harm for continued economic gain.

55. Plaintiffs also bring claims under California’s Unfair Competition Law (“UCL”), Cal. Bus. & Prof. Code, §§17200, et seq. The conduct and omissions alleged herein constitute unlawful, unfair, and/or fraudulent business practices prohibited by the UCL.

56. Plaintiffs also bring a claim for unjust enrichment. Defendant received a direct benefit from CN’s problematic and harmful use of its product, both from the amount of time she spent on Instagram and from her creation of multiple accounts. Under the circumstances stated

---

<sup>10</sup> See, e.g., <https://www.foxnews.com/tech/former-facebook-exec-wont-let-own-kids-use-social-media-says-its-destroying-how-society-works>

herein, it would be unjust and inequitable for Defendant to retain those ill-gotten benefits.

57. Plaintiffs bring a claim for invasion of privacy under California law. Defendant's conduct detailed herein frustrated and intruded upon Candace Wuest's fundamental parental rights to protect her child and to monitor and control her child's use of social media, and this intrusion occurred in a manner that was highly offensive to a reasonable person.

58. Finally, Plaintiffs bring claims for fraud and fraudulent concealment. Meta spent years lying to Congress and the public about the nature of its products and harms they cause. Meta made affirmative statements and material omissions of fact designed to lull potential users into trusting that their social media products were safe, and that Meta was prioritizing user safety over its own profits. Meta not only knew that these statements were false but was actively concealing the truth by creating a corporate culture of fear—conscientious Meta employees were made to believe that they would be ruined and not believed, and that their actions would result in others not being able to make Meta's products safer if they revealed the truth. Meta knew that its products were not safe, and knew that children, like CN, would be harmed by their use.

59. Plaintiffs' claims do not arise from third party content, but rather, Meta's product features and designs, including but not limited to algorithms and other product features that addict minor users, amplify and promote harmful social comparison, affirmatively select and promote harmful content to vulnerable users based on its individualized demographic data and social media activity, put minor users in contact with dangerous adult predators, and otherwise prioritize engagement (and Meta profits) over user safety.

## II. PARTIES

60. Plaintiffs CN, and her parent Candace Wuest, reside in Independence, Kentucky. CN opened her first Instagram account when she was about 12 years old. Upon information and belief, Meta required her to assent to its Terms of Service at that time. CN is still a minor, no longer uses the Instagram social media product, and disaffirms any contractual terms Meta might claim.

61. Defendant Meta is a Delaware corporation with its principal place of business in Menlo Park, California. Meta owns and operates the Facebook and Instagram social media platforms, applications that are widely available to users throughout the United States.

### III. JURISDICTION AND VENUE

62. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000, and Plaintiffs and Meta are residents of different states.

63. This Court has general jurisdiction over Defendant Meta because Meta's principal place of business is California and Meta is "at home" in this State. This Court also has specific jurisdiction over Meta because Plaintiffs' claims set forth herein arise out of and relate to Meta's activities in the State of California.

64. Venue is proper in this District under 28 U.S.C. § 1391(b) because Meta resides in the Northern District of California and a substantial part of the events or omissions giving rise to Plaintiffs' claims occurred in this District.

### IV. FACTUAL ALLEGATIONS RELATING TO PRODUCT DEFECTS

#### A. Facebook and Instagram Background

65. Facebook is an American online social network service that is part of the Meta Platforms. Facebook was founded in 2004 and became the largest social network in the world, with nearly three billion users as of 2021, and about half that number were using Facebook every day. The company's headquarters is in Menlo Park, California. Facebook recently changed its name to, and is referred to herein and collectively with Instagram, as Meta.

66. Instagram is a photo sharing social media application. Its original focus was to facilitate communication through images by featuring photos taken on mobile devices. Instagram launched in October 2010 and Facebook acquired it for \$1 billion in April 2012. Once acquired, Instagram experienced exponential growth, design, and development changes. It went from 10 million monthly active users in September of 2012 to 50 million weeks after the acquisition, to more than 600 million by December of 2016, and it continues to grow. Meta instituted dozens of product changes (also known as "growth hacks") that drove this increased engagement, but at the expense of the health and well-being of Instagram's users—especially teens and children.

#### News Feed Product

67. Both the Facebook and Instagram products show users a "feed." A user's "feed" is

1 a comprised of a series of photos and videos posted by accounts that the user follows, along with  
2 advertising and content specifically selected and promoted by Instagram.

3 68. Meta exerts control over a user's Instagram "feed," including through certain  
4 ranking mechanisms, escalation loops, and/or promotion of advertising and content specifically  
5 selected and promoted by Meta based on, among other things, its ongoing planning, assessment,  
6 and prioritization of the types of information most likely to increase engagement. In the case of  
7 certain user groups, like teens, this control translates to deliberate and repeated promotion of  
8 harmful and unhealthy content, which Meta knows is causing harm to its young users.

9 69. Over time, Meta "slowly switched" its News Feed (in its Facebook and Instagram  
10 products) from maximizing time-spent to maximizing sessions, even though Meta knows that  
11 maximizing sessions is harmful to its users.

12 70. Recommendation-based feeds and product features also promote harmful content,  
13 particularly where, as in the case of Meta, the algorithm is being programmed to prioritize number  
14 of interactions and not quality of interactions.

15 71. Meta exerts an unprecedented level of manipulation and control over its users and  
16 is knowingly directing harmful content to users as a matter of its algorithmic programming and  
17 settings Meta chooses as part of its prioritization of engagement over user safety. Meta has dozens  
18 of studies confirming these allegations.

19 72. Over the years, Meta employees have offered countless suggestions and  
20 recommendations as to product changes Meta could make to better protect its users from the harms  
21 Meta products cause. And over the years, Meta leadership has declined, delayed, or outright  
22 ignored the vast majority of those in favor of its own financial and growth-related interests.

23 73. In 2021, Senators Richard Blumenthal, Marsha Blackburn and Mike Lee tested and  
24 confirmed the fact that Meta's recommendation-based feeds and product features promote harmful  
25 content by having several accounts opened while providing information indicating that the users  
26 were teenage girls,

1 "Within an hour all of our recommendations promoted pro-anorexia and eating  
2 disorder content," Blumenthal said. "Nothing has changed. It's all still happening."

3 Sen. Mike Lee, R-Utah, said his office created an account for a 13 year old girl. Shortly  
4 afterward, the algorithm recommended a famous female celebrity to follow and when  
5 they did, Lee said, "It went dark fast."

6 The fake account was flooded with content about diets, plastic surgery and other  
7 damaging material for an adolescent girl, he said.

8 In another example this week, Blackburn's staff exposed a flaw in Instagram's setting  
9 for teens under 16.

10 According to Instagram's policies, new teenage accounts should automatically default  
11 to a private setting. But when Blackburn's team set up a phony account for a 15 year  
12 old girl, it automatically defaulted to public.

13 Mosseri acknowledged the error, explaining the mistaken default setting was triggered  
14 because the account was created on a web browser, as opposed to a mobile app.

15 "We will correct that," he said.  
16

17 See [https://www.npr.org/2021/12/08/1062576576/instagrams-ceo-adam-mosseri-hears-senators-](https://www.npr.org/2021/12/08/1062576576/instagrams-ceo-adam-mosseri-hears-senators-brush-aside-his-promises-to-self-poli)  
18 [brush-aside-his-promises-to-self-poli](https://www.npr.org/2021/12/08/1062576576/instagrams-ceo-adam-mosseri-hears-senators-brush-aside-his-promises-to-self-poli).

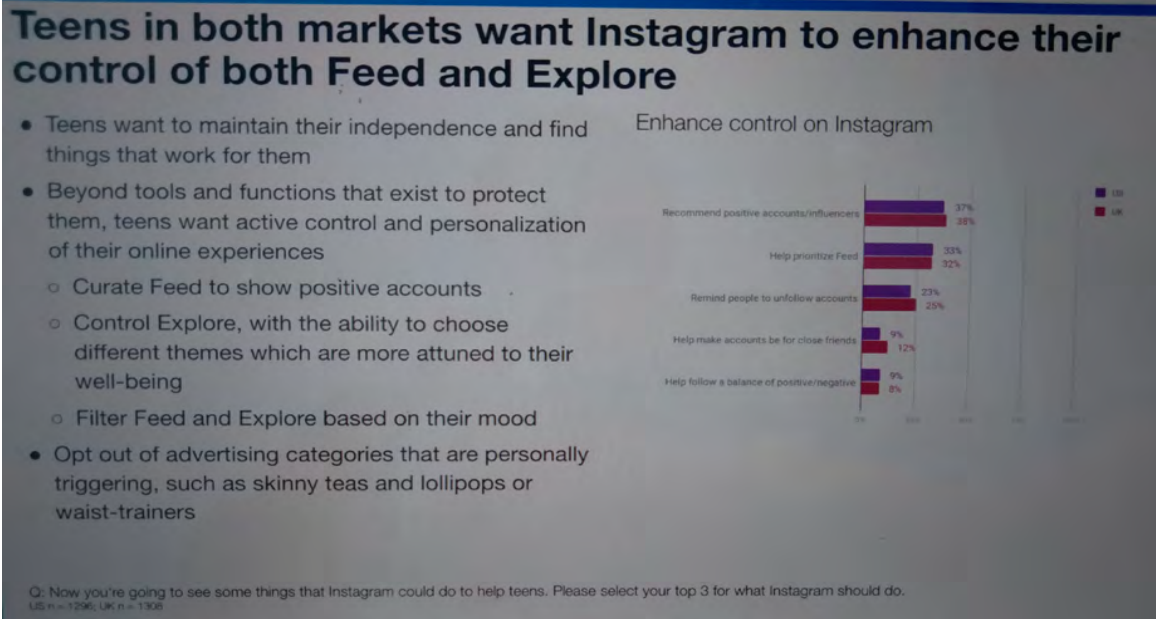

19 74. And again, Meta's recommendations are not coincidence, nor are they the product  
20 of third-party speech or even Meta's speech. Meta is exerting a degree of manipulation and control  
21 over its users via its unchecked technologies that far exceeds anything the world could have  
22 contemplated even a decade ago. Meta regularly "experiments" on users—users with no idea that  
23 they are being monitored and examined—to test product ideas, but also, to identify mechanisms  
24 through which Meta can control user behavior for its own profit. Moreover, Meta is not targeting  
25 millions, thousands, or even hundreds of users with its product. Meta's technologies allow it to  
26 target every single user (billions of people) simultaneously and on an individual basis, which fact  
27 makes its algorithmic and social media products far more dangerous than anything American  
28 courts and lawmakers have ever seen or could even have conceived of until Meta's internal

76. Meta is willing to addict its users if it means Meta's own long-term success.

## Explore Product

---

28

See, *supra*, “Teen Mental Health Deep Dive,” p. 54.

79. Meta also has conducted studies to identify precisely which of its algorithmically promoted content is most harmful to users, and the degree of harm that content causes. See, e.g., *supra*, “Social Comparison: Topics, celebrities, Like counts, selfies” and “Appearance-based Social Comparison on Instagram.” Despite being able to identify the harmful categories, as well as volume and amplification product defects causing harm, Meta ultimately determined that its promotion of such content is a large part of what makes the Instagram product appealing to teens. Meta decided against changing its current product as a result, and irrespective of identified harms.

80. Meta also knows that these harms (caused by Instagram) disproportionately impact protected groups, including young women; and that its product disproportionately targets protected groups, including young women.

### **Profile Settings**

81. Instagram profile default settings also cause harm. Users’ profiles on Instagram may be public or private, which is a product feature over which Meta exercises complete control. On public profiles, any user can view the photos, videos, and other content posted by the user. On private profiles, the user’s content may only be viewed by the user’s followers, which the user must approve. During the relevant period, Instagram profiles were public by default and Instagram allowed all users to message and send follow requests to underage users.

82. Defaulting profiles to public served no critical purpose in terms of product functionality and/or a user's ability to access content. Instead, this product feature increases user engagement during onboarding (when a user first starts using Instagram) by increasing user connections. Unfortunately for young children and teens, a numerically significant percentage of those would-be connections are harmful. Meta is aware of the harm and previously opted to not make necessary and cost-effective changes to prevent it.

#### **Direct Messaging Product Feature and Access to "Vulnerable" Users**

83. Meta's Direct Message settings also permit and encourage harm to vulnerable users. Harmful and dangerous interactions occur because of the Instagram direct message feature and current user settings, that is, Meta's chosen settings provide predators and other bad actors with direct and unsupervised access to children and teens.

84. Meta's direct messaging feature is where most unwanted interactions happen, including bullying and sexual exploitation of minors, which Meta knows, yet it has once again opted to not make necessary and cost-effective changes to prevent these harms – opting for engagement over safety.

#### **Push Notifications and Emails**

85. Meta's push notifications and emails encourage addictive behavior and are designed specifically to increase use of its Instagram product. Based on individualized data Meta collects, it then selects content and notification frequency for its users and notifies them via text and email. Instagram's notifications to individual users are specifically designed to, and do, prompt them to open Instagram and view the content Instagram selected, increasing sessions, and resulting in greater profits to Instagram. More to the point, even the format of these notifications has been designed and re-designed with the specific purpose of pulling users back onto the social media platform—irrespective of a user's health or wellbeing.

86. Upon information and belief, Meta has programmed its systems such that its programs send more of these notifications to its most addicted users, knowing that these users are the ones who have a harder time resisting the allure of this product feature.

### **Reels and Stories**

87. Instagram has also added features and promoted the use of short videos and temporary posts. The latter are referred to as “Reels” while the former is referred to as Instagram “Stories.” These products were developed to appeal to teens and Meta knows that these products are addictive, as well as defective.

88. To name only one example, Meta has not yet implemented certain, basic safety-related technologies across all product features – despite public representations to the contrary – while the algorithmic bias it operates within its algorithms is identifying and promoting these inherently riskier products in greater numbers to teens, women, and other minority groups. This means, for example, that Meta is identifying and recommending harmful and eating-disorder promoting content to young girls in higher numbers – as it did with CN. This is content these users would never have seen but for Meta’s identification and promotion, which harms Meta knew about but did nothing to correct as it prioritized keeping the attention of those teen users.

### **Marketing to Kids and Social Comparison Product Features**

89. Instagram also incorporates several unique product features that serve no functional purpose, but that do make Meta’s product more appealing to children and teens (*i.e.*, “likes” and filters, as well as avatars, emojis, and games) while simultaneously increasing social comparison pressure and resulting harm (*i.e.*, “likes” and filters). Meta knows that these product features disproportionally harm teen girls and young women, yet Meta leadership—singularly focused on its economic bottom line—rejects product change recommendations that would have better protected users against these harms and at minimal implementation cost to Meta.

90. Another example involves Meta’s “like” button feature. Meta has determined that its “like” product feature is a source of social comparison harm for many of its users. This is not surprising given that several of the Meta employees involved in creating that feature have since left Meta and have spoken publicly about the product’s addictive nature and harmfulness.<sup>11</sup> What is surprising, however, is that Meta identified the harmful feature (the “like” button), is aware of a low to no-cost solution that would reduce the harms to its users, and still made the business

<sup>11</sup> See, e.g., <https://www.theguardian.com/technology/2017/oct/05/smartphone-addiction-silicon-valley-dystopia>.

1 decision to *not* launch that product fix. This is another blatant example of Meta choosing profits  
 2 over human life and, specifically, the health and well-being of teens.

3 91. Upon information and belief, multiple Meta employees recommended and/or  
 4 supported the launch of this product change for the Instagram product, but Meta leadership said  
 5 no. And this specific feature was a source of significant emotional and mental harm to CN.

### 6 **Meta's Ownership and/or Licensing Rights in all User Content**

7 92. Instagram also creates images and GIFs for users to post on their videos and  
 8 pictures. Meta has also acquired publishing rights to thousands of hours of music, which it provides  
 9 to its users to attach to the videos and pictures that they post on Instagram. The GIFs, images, and  
 10 music are integral to the user's Instagram post and are, in fact, designed to encourage posting.  
 11 Indeed, in many cases, the only content in a user's Instagram post is the image, GIF or music  
 12 supplied by Meta. When users incorporate images, GIFs, and music supplied by Meta into their  
 13 postings, Meta is functioning as a co-publisher of such content. An Instagram user who  
 14 incorporates images, GIFs, or music supplied by Meta into their post is functionally equivalent to  
 15 a novelist who incorporates illustrations into their story. Instagram can no longer characterize the  
 16 images, GIFs, and music it supplies to its users as third-party content, just as the novelist cannot  
 17 disclaim responsibility for illustrations contained in their book. Meta has made the deliberate  
 18 decision to collaborate with its users in this regard and, as evidenced by Meta's internal documents,  
 19 Meta's decision is motivated by the fact that such collaboration results in increased engagement  
 20 and more profits for Meta itself.

21 93. Meta also has legal rights in all third-party content, such that it is not "third-party  
 22 content" at all. In 2012, Meta revised its Instagram Terms of Service to the following,<sup>12</sup>

23  
 24 To help us deliver interesting paid or sponsored content or promotions, you agree that  
 25 a business or other entity may pay us to display your username, likeness, photos  
 26 (along with any associated metadata), and/or actions you take, in connection with  
 27 paid or sponsored content or promotions, without any compensation to you.

28 <sup>12</sup> <https://www.theverge.com/2012/12/18/3780158/instagrams-new-terms-of-service-what-they-really-mean>

1 94. Its current terms (effective January 4, 2022) are different, but still grant Meta the  
 2 right to use all third-party content at Meta's sole and unilateral discretion,

- 3 • **We do not claim ownership of your content, but you grant us a license to use it.**  
 4 Nothing is changing about your rights in your content. We do not claim ownership of  
 5 your content that you post on or through the Service and you are free to share your  
 6 content with anyone else, wherever you want. However, we need certain legal  
 7 permissions from you (known as a "license") to provide the Service. When you  
 8 share, post, or upload content that is covered by intellectual property rights (like  
 9 photos or videos) on or in connection with our Service, you hereby grant to us a  
 10 non-exclusive, royalty-free, transferable, sub-licensable, worldwide license to host,  
 11 use, distribute, modify, run, copy, publicly perform or display, translate, and create  
 12 derivative works of your content (consistent with your privacy and application  
 13 settings). This license will end when your content is deleted from our systems. You

17 95. Meta directly profits from the videos and pictures its users create in collaboration  
 18 with Meta, as described above.

19 96. Meta knows that it is harming teens yet, when faced with recommendations that  
 20 will reduce such harms, Meta's leadership consistently opts for prioritization of profit over the  
 21 health and well-being of its teen users—that is, the millions of teen users who continue to use its  
 22 inherently dangerous and defective social media product every, single day.

23 97. Meta's products are used by many millions of children every day.

## 24 **B. Meta's Instagram Application is a Product**

25 98. There can be no dispute that Meta designs, manufactures, and distributes Instagram.  
 26 Meta refers to Instagram and its various product features internally and in public facing documents  
 27 as a "product."

28 99. Meta's Instagram product is designed to be used by minors and is actively marketed  
 to teens across the United States.

100. Meta has obtained countless patents in connection with its Instagram product,  
 which legal protection it would not be entitled to for mere editorial decisions.

101. The Instagram product is designed to be used by minors and is actively marketed  
 to minors across the United States. Meta markets to minors through its own marketing efforts and  
 design. In addition, Meta works with and actively encourage advertisers to create ads targeted at

1 and appealing to teens, and even to children under the age of 13. Meta spends millions of dollars  
2 researching, analyzing, and experimenting with young children to find ways to make its product  
3 more appealing and addictive to these age groups, as these age groups are seen as the key to Meta's  
4 long-term profitability and market dominance.

5 102. Meta also is aware that large numbers of children under the age of 18 use its product  
6 without parental consent. Indeed, Meta designs its social media product in a manner intended to  
7 allow and not prevent such use.

8 103. Meta is likewise aware that large numbers of children under the age of 13 use its  
9 product despite user terms or "community standards" that purport to restrict use to individuals who  
10 are 13 and older. They have designed their product in a manner that allows and/or does not prevent  
11 such use to increase user engagement and, thereby, increase its own profits.

12 **C. Meta Knows That Its Facebook and Instagram Products are Highly Addictive**

13 104. Meta and its leadership have repeatedly represented to the public and governments  
14 around the world that their Instagram and Facebook products are safe and not addictive.

15 105. In September of 2017, Meta CEO Mark Zuckerberg spoke out on the issue of opioid  
16 addiction, making general addiction-related statements, including that "Communities all across the  
17 country have a long road ahead, but as someone told me at the end, 'I'm hopeful because we're  
18 talking about it.' Me too."<sup>13</sup>

19 106. In April of 2018, Meta CEO Mark Zuckerberg testified under oath to Congress that  
20 Meta does not design its products to be addictive and that he is not concerned with social media  
21 addiction as it relates to teens. He stated,

22 I view our responsibility as not just building services that people like but as building  
23 services that are good for people and good for society as well ... we study a lot of  
24 effects of well-being, of our tools, and broader technology, and like any tool there  
25 are good and bad uses of it. What we find in general is that if you are using social  
26 media to build relationships then that is associated with all the long term measures  
27 of well-being that you'd intuitively think of ... but if you are using the internet and

28 <sup>13</sup> <https://www.northpointrecovery.com/blog/mark-zuckerberg-discusses-view-addiction-facebook/>

1 social media to just passively consume content and are not engaging with other  
2 people then it doesn't have those positive effects and it could be negative.<sup>14</sup>

3 107. In November of 2020, Meta CEO Mark Zuckerberg again testified under oath to  
4 Congress that Meta does not design its products to be addictive and that research on addictiveness  
5 of social media has not been conclusive.<sup>15</sup>

6 108. In March of 2021, Meta CEO Mark Zuckerberg testified under oath to Congress  
7 that Instagram is not addictive and that it does not cause harm to children and teens.

8 He was asked:

9 "So Mr. Zuckerberg, yes or no: Do you agree too much time in front of screens,  
10 passively consuming content, is harmful to children's mental health? ..."

11 He responded:

12 "I don't think that the research is conclusive on that..."

13 He was asked:

14 "Do you agree that you make money off of creating an addiction to your platforms?"

15 He responded:

16 "Congressman, no. I don't agree with that."

17 He was asked:

18 "Do you believe that your platform harms children?"

19 He responded:

20 "Congresswoman, I don't believe so. This is something that we study and we  
21 care a lot about; designing products that peoples' well-being is very important  
22 to us. And what our products do is help people stay connected to people they  
23 care about, which I think is one of the most fundamental and important human  
24 things that we do, whether that is for teens or for people who are older than that.  
25 And again, our policies on the main apps that we offer generally prohibit people  
26 under the age of 13 from using the services."<sup>16</sup>

27 109. On September 30, 2021, Meta's Head of Safety, Antigone Davis, testified under  
28 oath to Congress that Instagram is not addictive. She testified that she "disagree[d] with calling

<sup>14</sup> <https://www.youtube.com/watch?v=AB4mB-K7-xY>

<sup>15</sup> <https://www.tampafp.com/great-news-facebook-is-not-designed-to-be-addictive-according-to-zuckerberg/>

<sup>16</sup> <https://www.congress.gov/117/meeting/house/111407/documents/HHRG-117-IF16-Transcript-20210325.pdf>, at  
p. 67, 107, 175.

our product addictive. I also think that’s not how we build products.”<sup>17</sup> She denied Meta’s marketing to children under 13, repeatedly denied the existence of causal research regarding harms to teens from Instagram use and testified that Meta’s overarching goal is child safety: “We work tirelessly to put in place the right policies, products, and precautions so [young users] have a safe and positive experience.”<sup>18</sup>

110. On December 8, 2021, Instagram’s president Adam Mosseri provided written testimony and testified under oath to Congress that Instagram is not addictive.<sup>19</sup> He testified that teens come to Instagram while dealing with difficult things and that Instagram makes things better for them. Mr. Mosseri downplayed the significance of the documents disclosed by the Facebook Whistleblower, characterizing Meta’s numerous studies as involving input from small numbers of teens and not measuring “causal relationships between Instagram and real-world issues.”<sup>20</sup> Indeed, he testified that Meta’s overarching goal is child safety: “But I want to assure you that we do have the same goal. We want all teens to be safe online.”<sup>21</sup>

111. In truth, Meta has been studying its “addicting” product mechanics for years, and Meta leadership—including and specifically Meta CEO Mark Zuckerberg—had actual knowledge that these products are addictive and harmful to children and teens. Moreover, Meta’s own estimates reflect known addiction by a significant number of children and teens. For example, if we assume an addiction rate among US teen users only of 3%—which is *far lower* than Meta’s estimated—that means that more than *half a million* American teenagers (age 13 to 17) are currently addicted to Instagram to the point where their addiction is causing sleep deprivation, actively interfering in their friendships, family relationships, employment, and education, and is

<sup>17</sup> <https://www.rev.com/blog/transcripts/facebook-head-of-safety-testimony-on-mental-health-effects-full-senate-hearing-transcript> (“Sept. 30, 2021, Senate Hearing Transcript”), at 2:06:35; *see also id.* at 02:07:44 and 02:07:59 (Ms. Davis also denied that Meta’s business model includes getting users engaged for longer amounts of time).

<sup>18</sup> *Id.* at 24:58, 01:47:29, 1:48:07, 1:48:20, 2:10:47, 33:46, and 40:41.

<sup>19</sup> <https://www.commerce.senate.gov/2021/12/protecting-kids-online-instagram-and-reforms-for-young-users>, recording of December 8, 2021 Senate Hearing.

<sup>20</sup> <https://www.commerce.senate.gov/services/files/3FC55DF6-102F-4571-B6B4-01D2D2C6F0D0>, written Testimony of Adam Mosseri, Head of Instagram, dated December 8, 2021.

<sup>21</sup> <https://www.npr.org/2021/12/08/1062576576/instagrams-ceo-adam-mosseri-hears-senators-brush-aside-his-promises-to-self-poli>

1 causing other physical and emotional harms.

2 112. In March of 2020, Meta internally published a document titled “Social Comparison  
3 Exploratory Research” (*see, supra*, as published by WSJ) based on a US Exploratory Study it  
4 conducted titled “Teen Girls Body Image and Social Comparison on Instagram,”

5 **Teen Girls Body Image and Social Comparison on Instagram - An**  
6 **Exploratory Study in the US**

7 We conducted focus groups and diary study in the US to better understand teen girls’  
8 experience with appearance comparison on social media and how this impacted their body  
image and overall mental health.

9 113. In that document, Meta refers to its Instagram product mechanics as “addicting,”

10 **Instagram**

- 11 • Forget it's a highlight, reel vs. real  
12 • Product mechanics (addicting)  
13 • Explore, discover, stalk (down the rabbit hole)  
14 • Sport – 1 hour to edit image/caption, then monitor  
“likes”

15 *Id.* at p. 29.

16 114. Among the published Facebook Papers are other documents detailing studies  
17 specific to the issue of teen users and mental health, including the fact that teens “have an addicts’  
18 narrative about their use – it can make them feel good, feel bad. They wish they could spend less  
19 time caring about it, but they can’t help themselves ...” and “Teens recognize the amount of time  
20 they spend online isn’t good for them but at the same time they know they lack the willpower to  
21 control the time spent themselves.”

## Teens want help controlling the time they spend on the app

- Teens talk about the amount of time they spend on Instagram as one of the “worst” aspects of their relationship to the app.
- They have an addicts’ narrative about their use -- it can make them feel good, feel bad. They wish they could spend less time caring about it, but they can’t help themselves.
- Teens recognize the amount of time they spend online isn’t good for them but at the same time know they lack the willpower to control the time spent themselves

Time spent tools

*See, supra*, “Teen Mental Health Deep Dive,” p. 53.

115. In short, Meta employees and Meta leadership know that Instagram is addictive and harmful, in part, because it was designed that way (addictive design) and, also, because the billions of dollars Meta has spent researching user addiction has said so. Meta has never released this information on addiction and/or problematic use to the public; instead, its leadership lied repeatedly to Congress and the parents of its tens of millions of child and teen users.

116. Meta advertises its product as “free,” because they do not charge its users for downloading or using its product. What many users do not know is that, in fact, Meta makes a profit by finding unique and increasingly dangerous ways to capture user attention and target advertisements to its users. Meta receives revenue from advertisers who pay a premium to target advertisements to specific demographic groups of users in the applications including, and specifically, users under the age of 18. Meta also receives revenue from selling its users’ data to third parties.

117. The amount of revenue Meta receives is based upon the amount of time and user engagement on its platforms, which directly correlates with the number of advertisements that can be shown to each user. In short, Meta opted for user engagement over the truth and user safety.

118. Instagram is built around a series of design features that do not add to the communication and communication utility of the application, but instead seek to exploit users’

susceptibility to persuasive design and unlimited accumulation of unpredictable and uncertain rewards (including things like “likes” and “followers” and “views” in Stories). This design is unreasonably dangerous to the mental well-being of underage users’ developing minds.

119. Meta has also employed thousands of engineers to help make its products maximally addicting. One example is Instagram’s “pull to refresh” feature, which is based on how slot machines operate. It creates an endless feed, designed to manipulate brain chemistry, and prevent natural end points that would otherwise encourage users to move on to other activities.

120. Meta knows that its product is addictive, and it knows that millions of teen users want to stop using Instagram but cannot.

121. Meta does not warn users of the addictive design of its product. On the contrary, Meta actively conceals the dangerous and addictive nature of its product, lulling users and parents into a false sense of security. This includes consistently playing down its products' negative effects on teens in public statements and advertising, making false or materially misleading statements concerning product safety, and refusing to make its research public or available to academics or lawmakers who have asked for it.

122. For example, in or around July 2018, Meta told BBC News that “at no stage does wanting something to be addictive factor into” its product design process. Similarly, Meta told U.S. Senators in November of 2020 that “We certainly do not want our products to be addictive.” Yet, Meta product managers and designers attended and even presented at an annual conference held in Silicon Valley called the Habit Summit, which started in 2014 and ran until recently, and the primary purpose of the Summit was to learn how to make products more habit forming.

123. Meta’s Terms of Use also state that Meta is “Fostering a positive, inclusive, and safe environment,” and represent that Meta uses its “teams and systems ... to combat abuse and violations of our Terms and policies, as well as harmful and deceptive behavior. We use all the information we have—including our information—to try to keep our platform secure.” Yet, as seen in FBP 09/15 (“Exposure to integrity harms is a worse experience than ‘Over-enforcement’” (March 31, 2020), at p. 2), and elsewhere, this is not the truth. Meta *does* have the technology needed to protect its users, but only employs that technology when and to the extent it can do so

without decreasing user engagement and its own profits (or unless a “press fire” forces them to act).

124. Meta also engineers its product to keep users, and particularly young users, engaged longer and coming back for more. This is referred to as “engineered addiction,” and examples include features like bottomless scrolling, tagging, notifications, and live stories.

125. Meta spends billions of dollars marketing its products to minors, and has deliberately traded in user harm for the sake of its already astronomical revenue stream.

**D. Meta Has Designed Complex Algorithms to Addict Teen Users and Its Business Model is Based on Maximizing User Screen Time**

126. Meta has intentionally designed its product to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by the most advanced computer algorithms and artificial intelligence available to the largest technology companies in the world.

127. Meta has designed and progressively modified its product to promote problematic and excessive use that they know is indicative of addictive and self-destructive use. More specifically, Meta knows that many teens feel as though they cannot stop their use of Meta's product, even though they want to stop. *See*, Section B, *supra*.

128. One of these features, present in Instagram, is the use of complex algorithms to select and promote content that is provided to users in an unlimited and never ending “feed.” Meta is well-aware that algorithm-controlled feeds promote unlimited “scrolling”—a type of use those studies have identified as detrimental to users’ mental health. However, this type of use allows Meta to display more advertisements and obtain more revenue.

129. Meta has also designed algorithm-controlled feeds to promote content most likely to increase user engagement, which often means content that Meta knows to be harmful to its users. This is content that users might otherwise never see but for Meta's affirmative pushing of such content to their accounts.

130. In the words of another, high-level departing Meta employee,

In September 2006, Facebook launched News Feed. In October 2009, Facebook switched from chronological sorting to an algorithmic ranking. 10 years later, in July 2019, Sen. Josh Hawley introduced a bill to the US Senate that would ban features in app feeds, such as infinite scroll.

The response in 2006 was largely positive; the response in 2009 was negative from a vocal minority, but still largely positive; the response in 2019 was largely “lol, wut?” If I had to guess, the response to government regulation around engagement centric information feeds in 2026 will be “Omg finally”.

“Why We Build Feeds” (October 4, 2019), at p. 1.<sup>22</sup>

131. The addictive nature of Meta’s product and the complex and psychologically manipulative design of its algorithms is unknown to ordinary users.

132. Meta goes to significant lengths to prevent transparency, including posing as a “free” social media platform, burying advertisements in personalized content, and making knowingly false public statements about the safety of its product.

133. Meta also has developed unique product features that are designed to limit, and that do limit, parents’ ability to monitor and prevent problematic use by their children.

134. Meta’s addiction-driven algorithms are designed to be content neutral. They adapt to the social media activity of individual users to promote *whatever* content will trigger a particular user’s interest and maximize their screen time. That is, prior to the point when Meta has addicted its user and is then able to influence user preferences, its algorithm designs do not distinguish, rank, discriminate, or prioritize between types of content. For example, if the algorithm can increase User One engagement with elephants and User Two engagement with moonbeams, then Meta’s algorithm design will promote elephant content to User One and moonbeam content to User Two. Meta’s above-described algorithms are solely quantitative devices and make no qualitative distinctions between the nature and type of content they promote to users—as long as those promotions increase user engagement.

<sup>22</sup> [https://www.documentcloud.org/documents/21600853-tier1\\_rank\\_exp\\_1019](https://www.documentcloud.org/documents/21600853-tier1_rank_exp_1019)

**E. Minor Users’ Incomplete Brain Development Renders Them Particularly Susceptible to Manipulative Algorithms with Diminished Capacity to Eschew Self-Destructive Behaviors and Less Resiliency to Overcome Negative Social Media Influences**

135. The human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotional regulation, and impulse control.

136. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature.

137. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood.

138. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and for mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

139. The algorithms in Meta’s social media products exploit minor users’ diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency

caused by users' incomplete brain development. Meta knows that because its minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Meta has failed to design its product with any protections to account for and ameliorate the psychosocial immaturity of its minor users. On the contrary, Meta specifically designs its product with these vulnerabilities in mind.

## F. Meta Misrepresents the Addictive Design and Effects of its Social Media Product

140. At all times relevant, Meta has advertised and represented that its product is appropriate for use by teens and has stated in public comments that its product is not addictive and was not designed to be addictive. Meta knows that those statements are untrue.

141. Meta did not warn users or their parents of the addictive and mentally harmful effects that the use of its product was known to cause amongst minor users, like CN. On the contrary, Meta has gone to significant lengths to conceal and/or avoid disclosure of the true nature of its product.

**G. Plaintiffs Expressly Disclaim Any and All Claims Seeking to Hold Meta Liable as the Publisher or Speaker of Any Content Provided, Posted or Created by Third Parties**

142. Plaintiffs seeks to hold Meta accountable for its own alleged acts and omissions. Plaintiffs' claims arise from Meta's status as the designer and marketer of dangerously defective social media products, as well as Meta's own statements and actions, not as the speaker or publisher of third-party content.

143. Meta has designed its product to be addictive. For example, Meta has developed and modified product features like the continuous loop feed and push notifications, to incentivize users to stay on the product as long as possible and to convince users to log back on. Meta’s algorithm even calculates the most effective time to send such notifications, which in the case of teen and tween users often means in the middle of the night and/or during school hours. Essentially, the times they are least likely to have access to Meta’s social media product, which also—as Meta knows—are the times that their health and well-being necessitate them not being on Meta’s social media product. Meta’s product is designed to and does addict users on a content neutral basis.

1        144. Meta’s algorithm structure is by itself harmful to users, again, irrespective of  
2 content. For example, a primary purpose of Meta’s algorithm design is to determine individual  
3 user preferences first so that Meta can then influence user behavior and choices second—which is  
4 particularly dangerous in the case of teens.

5        145. It is clear from Meta’s records that Meta uses its product both to “experiment” on  
6 and test its users in ways heretofore unimagined, but also, it seeks to control user behavior through  
7 product features and capabilities and for the specific purpose of acquiring and retaining users.

8        146. On a content neutral basis, the manipulation and control Meta knowingly wields  
9 over its users daily is profoundly dangerous.

10        147. Meta’s Integrity Team employees regularly provide Meta leadership with warnings  
11 and recommendations, which Meta leadership regularly ignores. As explained in the employee  
12 departure memos previously discussed, Meta imposes insurmountable hurdles when it comes to  
13 making their existing and in-development products safer, while it imposes no user safety  
14 requirements when it comes to making its products more engaging.

15        148. Meta is responsible for these harms. These harms are caused by Meta’s designs and  
16 design-decisions, and not any single incident of third-party content. According to public statements  
17 made by the Facebook Whistleblower and other departed Meta employees, Meta’s Integrity Team  
18 routinely flags these types of issues for Meta leadership and are consistently ignored.

19        149. Meta failed to warn minor users and their parents of known dangers arising from  
20 anticipated use of its Instagram product. These dangers are unknown to ordinary consumers but  
21 are known to Meta and its employees. Moreover, these dangers do not arise from third-party  
22 content contained on Meta’s social media platform. This lawsuit does not involve a suit against a  
23 web browser provider for making available third-party content. To the contrary, Meta,

- 24            a. Designed and constantly redesigns its Instagram product to attract and addict teens  
25            and children, its “priority” user group.
- 26            b. Designed and continues to operate its Instagram product to ensure that teens and  
27            children can obtain unfettered access, even over parental objection.
- 28            c. Knows when teens and children are opening multiple accounts and when they are

1 accessing its product excessively and in the middle of the night—which Meta  
2 considers to be a “value add proposition.”

3 d. Works with advertisers and influencers to create and approve harmful content and  
4 provides direct access to its “acquired” teens and children—a user population Meta  
5 itself recognizes as being “vulnerable.”

6 e. Operates and provides the above Instagram product with the single-minded goal of  
7 increasing user engagement, including but not limited to things like maintaining  
8 harmful social comparison features and approving algorithm programming that  
9 promotes harmful content over clear dangers to user safety.

10 150. While it may be a third-party creates a particular piece of harmful content, the teens  
11 and children harmed by Instagram are not being harmed by a single piece of harmful content. They  
12 are being harmed by Instagram’s algorithmic programming and business decisions to show teens  
13 and children a constant barrage of harmful content to obtain more advertising revenue and increase  
14 engagement.

15 151. CN and children like her do not open Instagram accounts in the hopes of becoming  
16 addicted. Nonetheless, such children *do* become addicted, leading them to engage in foreseeable  
17 addict behaviors, such as lying to their parents, hiding their use of Instagram and/or secret  
18 Instagram accounts, losing control and becoming irritable, and feeling like they want to stop using  
19 Instagram but being unable to stop to the point where they continue to keep using even though  
20 they want to stop. These and other behaviors can and do result in serious harm to Instagram’s  
21 minor users.

22 152. CN and children like her do not start using Instagram in the hopes of being exposed  
23 to product features that cause harm to them. Yet Instagram use involves harmful forms of social  
24 comparison and inevitably pushes such children towards harmful “rabbit holes,” causing anxiety,  
25 depression, eating disorders, and self-harm—harms Meta itself has acknowledged repeatedly in  
26 internal documents.

27 153. The harms at issue in this case do not relate to or arise from third party content, but  
28 rather, Meta’s product features and designs, including algorithms that (a) addict minor users to

Meta's product; (b) amplify and promote harmful social comparison through Instagram product features; (c) affirmatively select and promote harmful content to vulnerable users based on its individualized demographic data and social media activity; and (d) put minor users in contact with dangerous adult predators. Indeed, the foregoing are merely examples of the kinds of harms at issue in this case.

154. Meta's product is addictive on a content neutral basis. Meta designs and operates its algorithms in a manner intended to and that does change behavior and addict users, including through a natural selection process that does not depend on or require any specific type of third-party content.

155. Meta has designed other product features for the purpose of encouraging and assisting children in evasion of parental oversight, protection, and consent, which features are wholly unnecessary to the operation of Meta's product. This includes but is not limited to Meta's failure to check identification or verify validity of user-provided email credentials, while simultaneously implementing product design features (such as easier ability to switch between accounts) meant to ensure easy access by children and teens, irrespective of parental consent.

156. Meta also promotes, encourages, and/or otherwise contributes to the development of harmful content. This Complaint quotes from just a few of the thousands of Meta documents disclosed by the Facebook Whistleblower, which establish this.

157. Meta also approves ads that contain harmful content, for example, and as discussed at the Senate hearing held on October 5, 2021,<sup>23</sup>

---

<sup>23</sup> <https://www.rev.com/blog/transcripts/facebook-whistleblower-frances-haugen-testifies-on-children-social-media-use-full-senate-hearing-transcript>

**Senator Mike Lee: (01:21:34)**

Now, since that exchange happened last week, there are a number of individuals and groups, including a group called the Technology Transparency Project or TTP, that have indicated that that part of her testimony was inaccurate. That it was false. TTP noted that TTP had conducted an experiment just last month, and their goal was to run a series of ads that would be targeted to children ages 13 to 17, to users in the United States. Now, I want to emphasize that TTP didn't end up running these ads. They stopped them from being distributed to users, but Facebook did in fact approve them. As I understand it, Facebook approved them for an audience of up to 9.1 million users, all of whom were teens.

**Senator Mike Lee: (01:22:31)**

I brought a few of these to show you today. This is the first one I wanted to showcase. This first one has a colorful graphic encouraging kids to, "Throw a Skittles party like no other," which as the graphic indicates, and as the slang jargon also independently suggests, this involves kids getting together randomly to abuse prescription drugs. The second graphic displays an ana tip. That is a tip specifically designed to encourage and promote anorexia. It's on there. Now the language, the ana tip itself independently promotes that. The ad also promotes it in so far as it was suggesting. These are images you ought to look at when you need motivation to be more anorexic, I guess you could say. Now the third one invites children to find their partner online and to make a love connection. "You look lonely. Find your partner now to make a love connection."

158. In other words, Meta approves advertisements "designed to encourage and promote anorexia" and encouraging children to abuse prescription or illegal drugs, which ads Meta then targets specifically at children in exchange for payment from the advertisers.

159. Meta utilizes private information of its minor users to "precisely target [them] with content and recommendations, assessing what will provoke a reaction," including encouragement of "destructive and dangerous behaviors."<sup>24</sup> Again, Meta specifically selects and pushes this harmful content, for which it is then paid, and does so both for that direct profit and also to increase user engagement, resulting in more profits down the road. "That's how [Meta] can push teens into darker and darker places."<sup>25</sup> Meta "knows that its amplification algorithms, things like engagement

<sup>24</sup> See <https://www.rev.com/blog/transcripts/facebook-whistleblower-frances-haugen-testifies-on-children-social-media-use-full-senate-hearing-transcript>. ("October 5, 2021, Senate Hearing Transcript"), Mr. Chairman Blumenthal at 00:09:02.

<sup>25</sup> *Id.*

1 based ranking ... can lead children ... all the way from just something innocent like healthy recipes  
 2 to anorexia promoting content over a very short period of time.”<sup>26</sup> Meta has knowledge that its  
 3 product and the content they are encouraging and helping to create is harmful to young users and  
 4 chooses “profits over safety.”<sup>27</sup>

5 160. Meta has information and knowledge that can determine with reasonably certainty  
 6 each user’s age, habits, and other personal information, regardless of what information the user  
 7 provides at the time of account setup. Meta can also determine on a mass scale and with reasonably  
 8 certainty which of its users are teens, regardless of what information they provide at the time of  
 9 account setup. Meta has used this capability for its own economic gain.

10 161. None of Plaintiffs’ claims rely on treating Meta as the publisher or speaker of any  
 11 third party’s words or content. Plaintiffs’ claims seek to hold Meta accountable for its own  
 12 allegedly wrongful acts and omissions, not for the speech of others or for Meta’s good faith  
 13 attempts to restrict access to objectionable content.

14 162. Plaintiffs are not alleging that Meta is liable for what the third parties said, but for  
 15 what Meta did.

16 163. None of Plaintiffs’ Claims for Relief set forth herein treat Meta as a speaker or  
 17 publisher of content posted by third parties. Rather, Plaintiffs seek to hold Meta liable for its own  
 18 speech and its own silence in failing to warn of foreseeable dangers arising from anticipated use  
 19 of its product. Meta could manifestly fulfill its legal duty to design a reasonably safe social media  
 20 product and furnish adequate warnings of foreseeable dangers arising out of the use of its products  
 21 without altering, deleting, or modifying the content of a single third- party post or communication.  
 22 Some examples include,

- 23 a. Not using its addictive and inherently dangerous algorithm in connection with any
- 24 account held by a user under the age of 18.
- 25 b. Not permitting any targeted advertisements to any user under the age of 18.
- 26 c. Fixing or removing all features that currently do not implement the tools Meta uses

27 <sup>26</sup> October 5, 2021, Senate Hearing Transcript, Ms. Francis Haugen at 00:37:34.

28 <sup>27</sup> *Id.* at 02:47:07.

1 to identify and remove harmful content (particularly since Meta knows that its  
2 algorithms and other systems are pushing these higher risk features  
3 disproportionately to protected classes).

- 4 d. Prioritizing internally its removal of harmful content over the risk of losing some  
5 user engagement—i.e. users who might be offended when Meta takes down what  
6 it believes to be harmful content.
- 7 e. Requiring identification upon opening of a new account, and restricting users under  
8 the age of 18 to a single account. This is something teens have even asked Meta to  
9 do *for their safety*, “Teens in the UK suggested individuals only be allowed to have  
10 one account ... some went so far as to recommend the account be verified by a  
11 password ...” *See, supra*, “Teen Mental Health Deep Dive,” p. 55.
- 12 f. Requiring verification by email when a user opens a new account. Not requiring  
13 verification allows underage users to access Instagram and does not stop bad actors.
- 14 g. Immediate suspension of accounts where Meta has reason to know that the user is  
15 under the age of 13, including when the user declares that they are under the age of  
16 13 in their bio or comments and where Meta determines an “estimated” age of under  
17 13 based on other information it collects; and not allowing the account to resume  
18 until the user provides proof of age and identity and/or parental consent.
- 19 h. Suspension of accounts where Meta has reason to know that the user is over the age  
20 of 18, but where they are providing information to suggest that they are minors  
21 and/or are representing themselves as minors to other Instagram users; and not  
22 allowing the account to resume until the user provides proof of age and identity
- 23 i. Launching Project Daisy and Pure Daisy, meaning that each user could see their  
24 own likes but would be unable to see the likes on any other user’s posts and  
25 comments.
- 26 j. Instituting advertising safeguards to ensure that Meta is not profiting directly from  
27 or otherwise pushing or endorsing harmful advertising content.
- 28 k. Requiring that all teen user accounts be set to private and not allowing any user

1 under the age of 18 to change user settings to public.

2 l. Not permitting direct messaging with any user under the age of 18 if that minor  
3 user is not already on a user's friend list.

4 m. Requiring parental consent and restricting account access for users under the age of  
5 18 to prevent usage at night and during regular school hours.

6 164. These are just some examples, all of which could be accomplished easily and/or at  
7 commercially reasonable cost. Meta itself has discussed and considered many of these, but its  
8 leadership ultimately declined to make such product changes because such changes—while better  
9 for the health and wellbeing of Instagram users—could result in a relatively small decrease to  
10 Meta's more than \$200 billion in annual revenue.

11 **V. PLAINTIFF-SPECIFIC ALLEGATIONS**

12 165. CN was born on November 27, 2004, and grew up in Independence, Kentucky.

13 166. CN was a vibrant and outgoing child, gifted in language and arts and dedicated to  
14 school. CN was often surrounded by friend and was known for bringing happiness and joy to those  
15 around her. She was full of life and imagination. She was not sure what she wanted to be when she  
16 grew up, sometimes a teacher, sometimes an artist—she had so many ideas of her future.

17 167. CN got her first cell phone when she was around 12 years old. She stayed at her  
18 father's house part time and Plaintiff Candace Wuest had safety concerns and wanted CN to always  
19 be able to reach her if needed.

20 168. Candace did not know much about social media at the time, just that it was a way  
21 for people to keep up with other people. She was also struggling to make ends' meet, so sometimes  
22 got behind on the phone bill—which resulted in occasional breaks in cell service.

23 169. Candace looked at Instagram, primarily because it would provide her and CN with  
24 a means to stay connected even when their phones were not working. Candace recalls looking into  
25 the Instagram product and being impressed with the statements Meta and Meta founder and CEO  
26 Mark Zuckerberg made regarding safety and kids. As a hairdresser, Candace also heard a lot about  
27 the product from clients. She understood based both on what she read by Meta and heard from  
28 others that Instagram was as safe as it gets, kids used it regularly, and that it was not addictive.

1           170. Candace made clear to CN that she would always have access to the Instagram  
2 account and would monitor it from time to time, which Candace reasonably believed she could do  
3 based on what she had read and heard about the Instagram product. That is, Candace did not know  
4 about Instagram’s addictive design, encouragement of FINSTA and/or SPAM accounts (secret  
5 secondary accounts created by kids), social comparison harms caused by Instagram products and  
6 algorithms, or harmful recommendation systems and profile/messaging settings.

7           171. In 2012, Meta purchased Instagram for \$1 billion dollars and began making  
8 significant changes to the Instagram social media product. In 2016 alone, Meta made it easier to  
9 switch between multiple accounts (February 2016), switched its Feed from chronological to  
10 algorithmically-driven (March 2016), and launched of Instagram Stories (August)—a feature Meta  
11 designed to be like Snapchat Stories because of Snapchat’s success with teens.

12           172. Candace was not aware of these specific changes and continued to reasonably rely  
13 on Meta’s representations that its product was safe and Meta’s continued distribution to children  
14 and teens. She had no reason to think that Meta was knowingly making and distributing harmful  
15 products to anyone, much less to kids.

16           173. CN’s use of Instagram developed into a dependency on the Instagram product and  
17 coincided with a steady, but severe, decline in her mental health.

18           174. At first, CN used Instagram to communicate with her mom and find recipes. She  
19 frequently messaged Candace recipes for exciting new foods—usually sweets—which they would  
20 often make together. CN loved looking for new recipes.

21           175. After a while, however, she stopped sending recipes and became preoccupied with  
22 the idea that she needed to be slender. By sixth grade, the recipes stopped entirely.

23           176. Candace Wuest was unaware of it at the time, but Meta’s inherently dangerous  
24 algorithms and recommendation systems had escalated CN from delicious recipes to healthy  
25 recipes and then to dangerous recipes—for example, recipes designed to achieve negative caloric  
26 intake. Meta’s inherently dangerous algorithms and recommendation systems began  
27 recommending to CN and connecting CN with users, user groups, and content that provided her  
28 with tips and tricks on how to hide the fact that she was not eating.

1 177. Meta also began flooding CN's Explore page with images of excessively thin  
2 models, focusing on thigh gaps, bridge gaps, and clavicle bones. Meta's proprietary algorithms  
3 recommended and promoted content with hashtags like #pro-ana and #thinspo. These are not terms  
4 CN searched for but, rather, content Meta's recommendation system sent to her. CN would open  
5 her Explore page and the content was simply there, in mind blowing volumes.

6 178. Meta's social media product pushed 12-year-old CN down a dangerous rabbit hole,  
7 which design defects Meta had full knowledge of but failed to correct based on determinations that  
8 these design defects were more profitable for Meta if left in place.

9 179. The following two photos are ones taken of CN in the summer of 2017, just before  
10 seventh grade, and then in August of 2018, when CN started eighth grade,

**C ■ Summer  
2018**

180. CN was still a star student in seventh grade, but she also began exhibiting symptoms of anxiety and depression—symptoms Meta has identified as ones that can be caused by use of its Instagram product and ones that were caused by CN’s use of its Instagram product. CN became less social and less self-confident. She also started sneaking out of her room at night to get her cell phone. Candace did not allow CN to keep her cell phone with her at night, so she would wait until Candace fell asleep, sneak out and get her phone, stay up all night on social media, and make sure to put her phone back before Candace was awake. Candace caught CN doing this on several occasions and made clear that she could not follow the rules then she would not get to have a phone except when she was at her father’s house.

181. Candace also could not control what happened at CN’s father’s house and believes that there were not such limits placed on cell phone access.

182. Unbeknownst to Candace, CN was addicted to Instagram and that addiction was

1 slowly worsening. Her addiction was resulting in severe sleep deprivation, as well as anxiety,  
2 depression, and guilt for her behavior and dependency. Moreover, CN was being harmed by the  
3 content Instagram was affirmatively directing her towards via its algorithms and Instagram’s social  
4 comparison features, such as its “likes” feature.

5 183. In seventh grade, CN joined the swim team after realizing that swimming burned a  
6 lot of calories. She lost more weight and began restricting her calories even further.

7 184. When swimming ended in early 2018, CN began to worry about the reduced  
8 exercise and Instagram provided her with solutions. Around this same time, Instagram’s  
9 algorithms and related technologies began pushing extreme exercise content and recommending  
10 user groups—which she joined as a result—focused on extreme exercise and eating disorders.

11 185. Meta was identifying and promoting CN toward harmful content through various  
12 recommendation mechanisms built into its Instagram product. For example, Meta sent CN  
13 recommendations to eating disorder themed pages and groups. Meta also sent CN  
14 recommendations for “friends” who were, in fact, adult Instagram users either suffering from these  
15 mental health issues themselves or using the Instagram product to find and exploit young girls;  
16 and, likewise, Meta recommended CN to these same types of adult users, who then sought to  
17 connect with her. As made clear through internal Meta documents, these product features are  
18 harmful to a significant percentage of Instagram users, particularly teens and young women

19 186. Meta also harmed CN through specific product features like direct messaging and  
20 group chat. For example, Instagram’s Direct Message and group chat features allowed adult users  
21 to message CN directly. As made clear through internal Meta documents, these product features  
22 are harmful to a significant number of underage users. They also are not necessary to Instagram’s  
23 operation and are features Meta can restrict and/or disable—but Meta makes calculated and  
24 economic-based decisions to keep them in place because Meta knows that restricting or disabling  
25 them would negatively impact engagement and revenue.

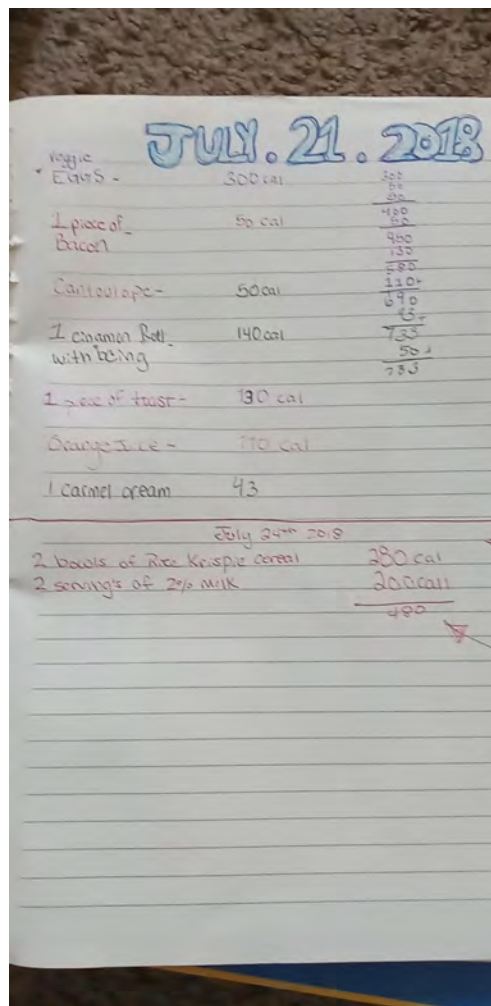

26 187. Meta was providing CN with constant, harmful access to multiple Instagram  
27 accounts, and had designed and was operating Instagram in a manner that ensured that there was  
28 nothing CN’s mother could do to protect her—in fact, Candace did not even know the source of

the harm, nor could she have discovered it given the degree to which Meta was concealing its findings from the public. Meta did not disclose the fact of its addictive design and its own efforts to addict young children and what it was learning about the harm its specific product features were causing to children and teens—the precise types of harms that were now happening to CN because of Instagram.

188. Candace Wuest had no way to determine Instagram’s role in CN’s ongoing but hidden battle with severe depression, anxiety, self-harm, and eating disorders.

189. In April of 2018, CN stopped menstruating. She did not tell Candace at the time, but she did tell some of the Instagram users Meta had directed her to—who told her that it was a good sign, and she was doing something right. CN was counting every calorie, and making sure she burned more calories than consumed daily,

1           190. In August of 2018, Candace took CN clothes shopping. CN had started wearing  
2 baggy clothes and had lost enough weight that she needed some new ones. That was when her  
3 mom realized something was wrong. Candace was looking around in the department store to find  
4 CN and realized that she was looking at her—only, CN looked nothing like she did when she first  
5 began using Instagram. She was pale and thin, and almost passed out while shopping.

6           191. After shopping Candace took CN to dinner. She had chosen a restaurant that did  
7 not list the calories of each food item on the menu, which threw CN into a panic.

8           192. The next day, Candace took CN to the doctor. Unfortunately, but the doctor was  
9 not alarmed. They reported that CN had lost five pounds since her last visit but was still within the  
10 acceptable BMI rate. Candace knew that something was wrong and took CN directly to Cincinnati  
11 Children's Emergency Room.

12           193. Cincinnati Children's immediately identified the issue quickly, and told Candace  
13 that CN was going into heart failure. CN was admitted for anorexia nervosa within about an hour  
14 and transferred to Cincinnati Children's Liberty Campus, where she was hospitalized for two and  
15 a half weeks.

16           194. CN was released from Cincinnati Children's in mid-September 2018. She was only  
17 13 years old at the time.

195. During treatment, CN wrote the following letter (with corrections),

*Dear Society,*

*You always expect everyone to live up to certain standards. This is not always fair because some people may have more to them under the surface. Ya know? I really think you should take this into consideration. My self-esteem along w/ many others is super low because of you and the images you portray.*

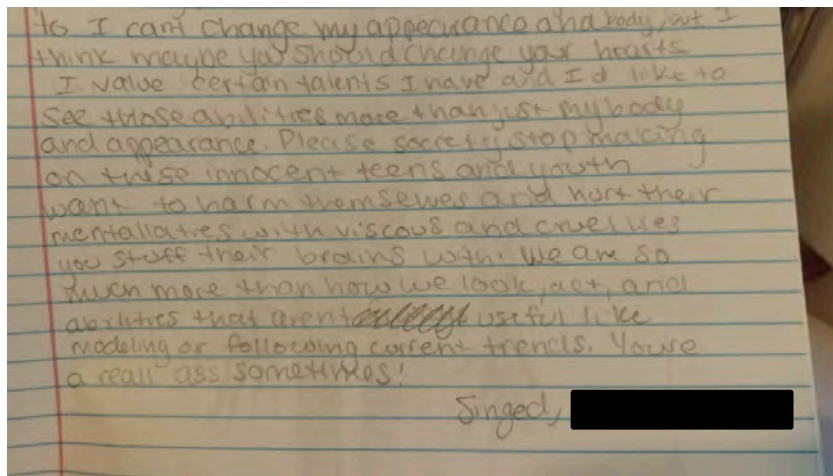

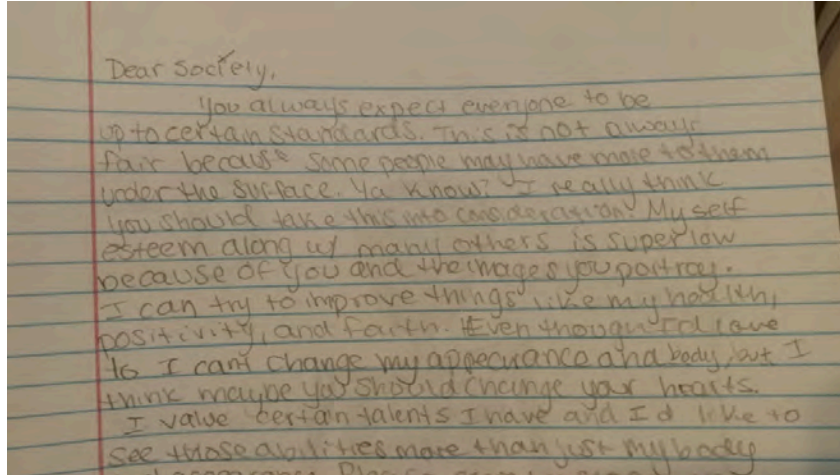

*I can try to improve things like my health, positivity, and faith. Even though I'd love to change my appearance and body, but I think maybe you should change your hearts.*

*I value certain talents I have and I'd like to see those abilities more than just my body and appearance. Please society stop making all these innocent teens and youth want to harm themselves and hurt their mentalities with viscous and cruel lies you stuff their brains with. We are such much more than how we look, act, and abilities*

that aren't useful like modeling or following current trends. You're a real ass sometimes!

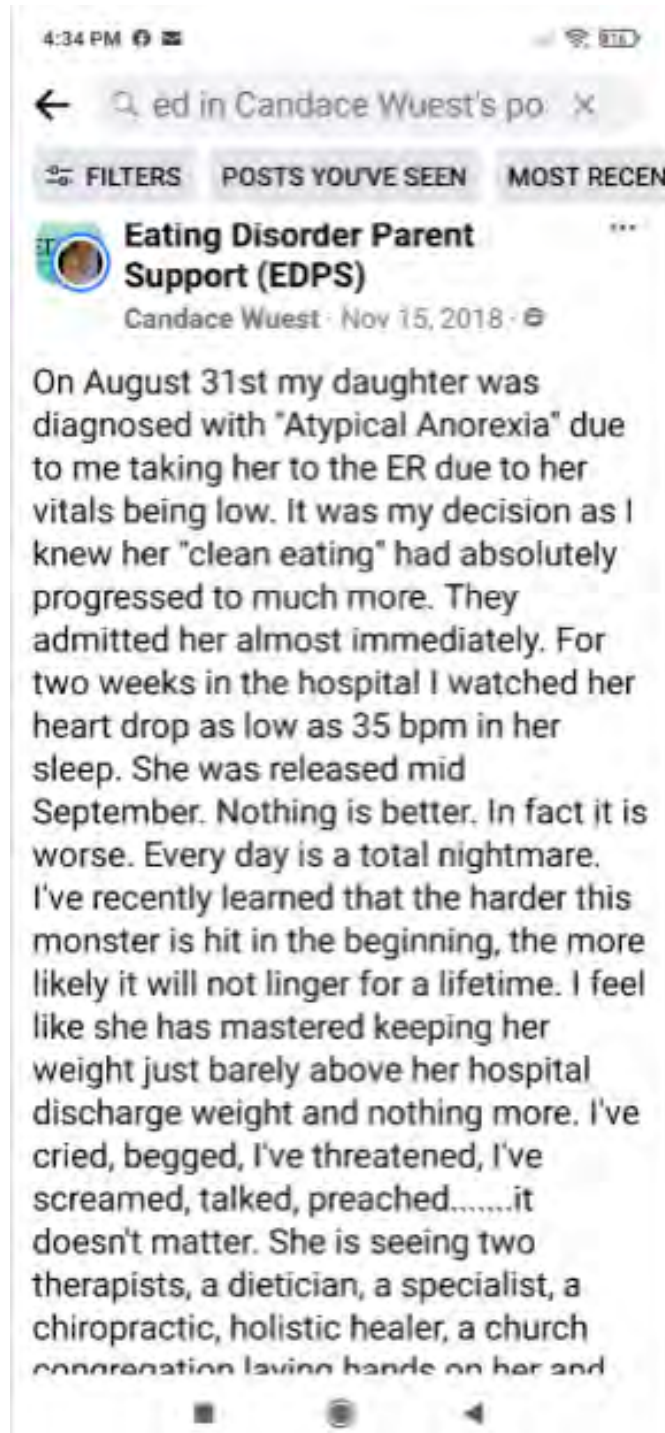

Signed,

CN

196. After CN's release from Cincinnati Children's, Candace posted the following to a Facebook support page,

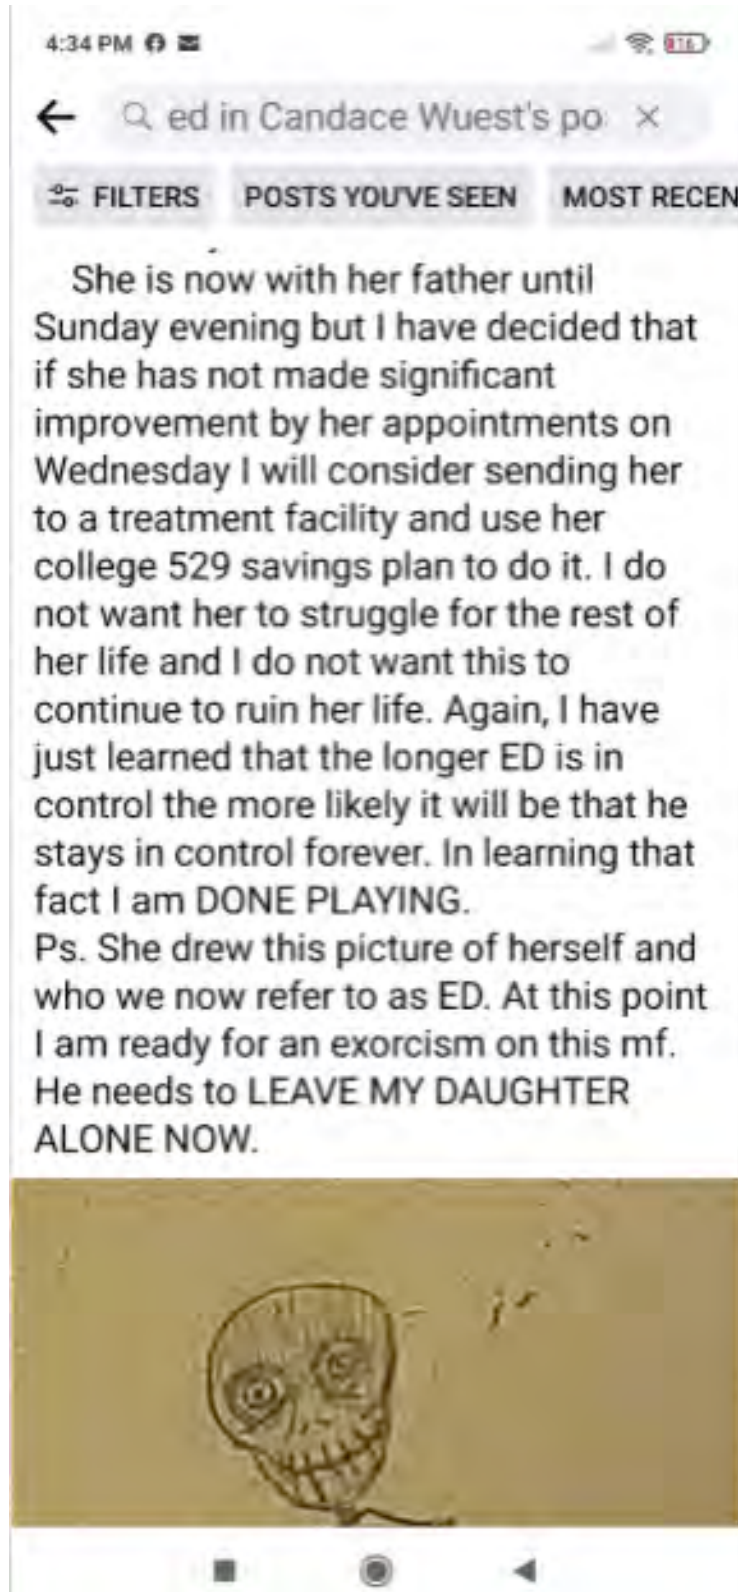

4:34 PM      97%

← ed in Candace Wuest's po X

 FILTERS POSTS YOU'VE SEEN MOST RECENT

chiropractic, holistic healer, a church congregation laying hands on her and praying, a preist.....you name it. Doesn't get better. Only worse. I believe she is getting up at 4am and going to the basement to exercise. She has completely mastered keeping herself at just above hospital weight. She used to be one week with me and one week with her dad due to shared parenting. He has practically given me full custody. I own my own business that generates enough revenue to keep a roof over our heads but that's it. I've taken her to every doctors appointment myself. The specialists want me to take full custody. I can't. I have to work. I have two other children. A son 16 and a 4 year old that is just now in remission from pediatric cancer. I can't do any more than what I'm doing. I've even had her out on a low dose of Prozac in attempts to get a little ahead of things. Nothing is working. Nothing. Her care team is literally stationed at Cincinnati Children's which is the number two pediatric hospital in the country.

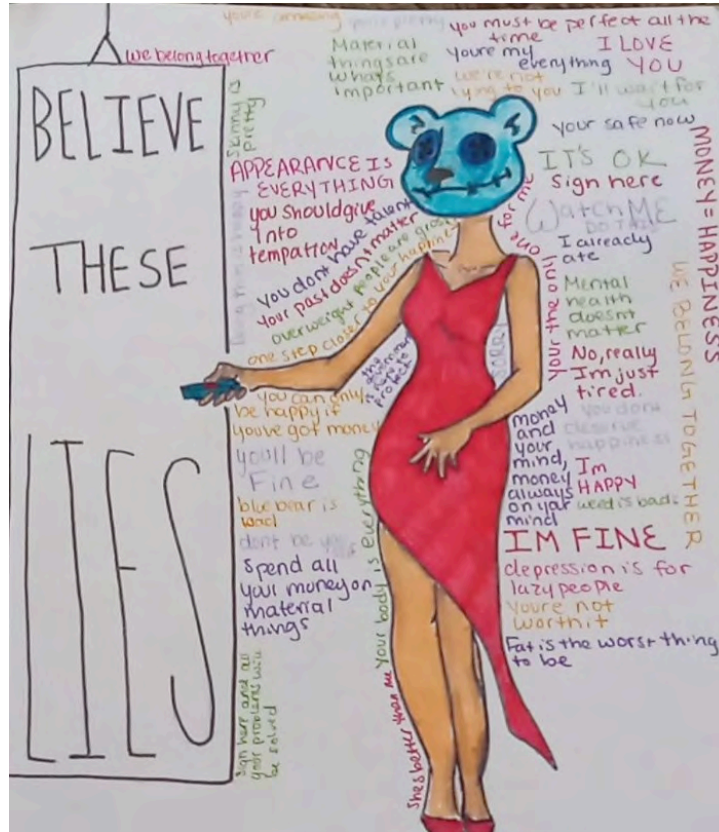

This is the picture of “Ed” CN drew,

197. And over the next few years, CN expressed her feelings through her art,

198. But for Meta's misrepresentations and material omissions relating to the safety of its social media product and its use of technology to protect young users, CN would not have been exposed to Instagram's features and design.

199. But for Meta's likes feature and other harmful social comparison product features, CN would not have experienced the anxiety and depression that stem from the number of likes collected and Meta's amplification of social comparison content.

200. But for the endless feed and explore features, along with other product design features Meta has engineered to product dependency by its users and, especially, its youngest users, CN would not have experienced the clinical addiction that these features were designed to promote.

201. But for Meta's recommendation and content algorithms, and profile settings and direct messaging features, CN would not have been connected and exposed to adult users who encouraged and helped her hide her life-threatening eating disorder from her mother.

202. Starting in 2016, Meta's algorithm exposed CN to massive amounts of eating

1 disorder and other unhealthy content, including pro-ana content, as well as social comparison  
2 product features. CN began using Instagram more. She received recommendations for pro-ana  
3 groups and content to follow and spent hours looking at that content. CN started by eating healthier,  
4 then eating less and exercising more, fueled on by the images that Meta's algorithm bombarded  
5 her with in her Feed, Stories, and Explore. She began thinking that she wasn't good enough, and  
6 that she needed to look like the models she saw on Instagram.

7 203. CN also got anxious and depressed every time she tried to post something on her  
8 account, afraid that it wouldn't get enough likes and, as time went on, she began to feel worse and  
9 worse about herself. She obsessed over likes every time she posted. Often her day and her mood  
10 turned on those posts and how much people liked them, which eventually destroyed her confidence  
11 and self-esteem both on Instagram and in the world outside of Instagram.

12 204. Through her use of Instagram CN also received explicit sexual communications  
13 and images from adult users and was messaged and solicited for sexual exploitive content and acts  
14 on numerous occasions by adult users of Instagram. These adult users are encouraged to use  
15 Instagram to sexually solicit and abuse minors due to Meta's refusal to verify identity and age for  
16 new users or implement feasible safeguards to protect minor users from receiving inappropriate  
17 sexual content.

18 205. At all times relevant, Meta knew that some of its Instagram users would become  
19 addicted to Instagram (or, in Meta's words, would engage in "problematic use"). Meta also knew  
20 that children and teenagers would be particularly susceptible, and Meta knew or should have  
21 known what an addiction like this would do those children and teenagers and their families. But  
22 Meta didn't care. For years, Meta has been conducting studies meant to help increase usage and  
23 dependency by children under 13, like CN.

24 206. CN was dependent on Instagram and could not stop using Instagram, even when  
25 the social media product was directing increasing amounts of harmful content and amplifying that  
26 harmful content via CN's Instagram accounts and product features. CN was repeatedly bombarded  
27 with and exposed to content identified and recommended to her by Meta, which increasingly  
28 included underweight models, unhealthy eating, and eating disorder content.

207. In fact, Meta worked hard to develop and implement technologies and features designed to increase engagement (and its own profits) but which were harmful to users. To name only a few examples, from 2012 through 2015, Meta implemented new advertising features, which allowed advertisers to target users based on age, location, gender, and other characteristics. Meta failed to exercise reasonable care to ensure that the advertisements were safe. Meta profited from its advertising practices and product features, while CN was exposed to and harmed by harmful advertising content created and/or selected by Meta for her viewing. Meta also made changes in February 2016, to make it easier for Instagram users to easily switch between multiple accounts. CN opened FINSTAs (secret Instagram accounts) and Meta exposed CN to addictive design, harmful advertising, and other, Meta-backed content through those accounts as well. And in March 2016, Meta switched its feed from chronological to algorithm-driven ordering. Which meant that, by the time CN began using its Instagram product, Meta was identifying, prioritizing, and escalating certain posts and content in CN's Instagram feed. More specifically, it identified, promoted, and prioritized harmful content based on its determination that such content was more likely to keep CN's attention, thereby increasing her use of its product and resulting revenue.

208. The more CN accessed and used the Instagram social media product, the worse her mental and physical health became.

209. Over the last four years, Plaintiffs CN and Candace Wuest have survived 10 hospitalizations, including one residential stay and two active suicide attempts, because of Instagram's inherently harmful and dangerous social media product. During CN's multiple hospitalizations and one long term residential stay, she had to be "tubed" multiple times. She refused to eat to the point where a feeding tube was necessary. And when she tried to eat, CN felt so much anxiety and guilt that she would engage in self-harm. To this day, her arms, stomach, legs, and ankles are scarred with those markings of suicidal ideation and self-injury – what Meta refers to internally as "SSI," an injury Meta knows it is causing to young girls like CN.

210. CN's honor roll status and dreams for her future became a distant memory. CN's eating disorder resulted in significant loss of muscle and parts of her brain. It was not until very recently that CN got back to the point where she could be trusted to feed herself, that is, her mother

1 will ask her to go get a meal and she will. It was not until very recently that CN could focus long  
2 enough to sit down and read a book. Plaintiffs' lives have gone from planning for the future to  
3 surviving day-to-day.

4 211. CN is aware of the challenges ahead and works hard every day to not slip back into  
5 her eating disorder.

6 212. CN's addiction and resulting mental health disorders were the proximate result of  
7 the unreasonably dangerous Instagram product Meta made accessible to her and that she used. As  
8 set forth in detail below, Meta's products were not reasonably safe due to their defective design  
9 and inadequate warnings.

10 213. To this day, Meta has actively concealed the fact and has "sought to stonewall and  
11 block this information [information about the dangerousness of their products, especially to young  
12 users] from becoming public."<sup>28</sup> Meta "intentionally"<sup>29</sup> hid vital information in its possession from  
13 the public, the US government, and governments, including information relating to the safety of  
14 children and the role of its algorithms and other Instagram product features in causing addiction,  
15 depression, anxiety, eating disorders, and other harms.

16 214. Meta made false statements to the press and public, designed to cover up the  
17 inherent dangers of their products and, even when asked direct questions as to how those products  
18 "impact the health and safety of our children, they choose to mislead and misdirect."<sup>30</sup>

19 215. Plaintiffs did not discover, or in the exercise of reasonable diligence could not have  
20 discovered, that CN's addiction, depression, anxiety, self-harm, eating disorders, attempted  
21 suicides, and other harms were caused by Meta's unreasonably dangerous products until early  
22 2022, when Candace found out about the Facebook whistleblower and disclosed Meta documents.

23 216. CN disaffirms all contracts Instagram may purport to have with her and is no longer  
24 using Instagram.

25 217. In the eighth grade CN wrote an essay that got her accepted into a new concepts  
26

27 <sup>28</sup> October 5, 2021, Senate Hearing Transcript, Mr. Chairman Blumenthal at 00:05:21.

28 <sup>29</sup> *Id.* at 00:29:25.

<sup>30</sup> October 5, 2021, Senate Hearing Transcript, Ms. Francis Haugen, at 00:32:20.

high school in Kentucky, Ignite, which enables students to graduate high school with an Associate Degree. As a result of CN's social media addiction and the harmful content and features Instagram relentlessly promoted and provided to her in its effort to increase engagement, CN's had to leave Ignite and her life-long honor roll track record has become Ds and Fs.

218. As a result of CN's social media addiction and the harmful content and features Instagram relentlessly promoted and provided to her in its effort to increase engagement, CN also had to undergo professional counseling, inpatient programs, outpatient programs, and eating disorder programs. CN must stay in constant contact with doctors and dieticians, fights to stay in recovery every day, and will suffer permanent mental and emotional damages because of what Instagram has done.

219. As a result of CN's social media addiction and the harmful content and features Instagram relentlessly promoted and provided to her in its effort to increase engagement, CN developed a brain condition known as prolactinoma.

220. Meta was studying the brains of children and teens. CN was just another brain to Meta, resulting in her own MRI and diagnosis.

221. While the precise long-term impacts CN's diagnosis are not yet known, common outcomes include infertility, low sex drive, and painful intercourse. Upon information and belief, CN's condition was caused by medications made necessary because of the impact on CN's brain of her Instagram-caused eating disorder

222. These harms are a direct and proximate result of the social media addiction Instagram fostered and encouraged for its own financial gain and harms that resulted therefrom.

223. But also, Candance Wuest has suffered medical conditions as a direct result of the social media addiction Meta fostered and encouraged for its own financial gain and harms that resulted therefrom. This includes a stress-related skin condition Candace developed on her hands, dyshidrotic eczema.

224. Candace first developed this condition in the winter of 2020, when CN returned from residential treatment and then relapsed. At first it was bearable, but after CN attempted suicide in December 2021, it flared out of control and Candace was forced to take time off work.

1 If Candace did not own her own salon, she would have been out of a job. As it is, however, she  
 2 has lost significant income because of this condition and, if she cannot get it under control, it could  
 3 jeopardize her business and career.

4 225. Candace Wuest has suffered other, severe financial harms as a direct result of the  
 5 social media addiction Meta fostered and encouraged for its own financial gain and harms that  
 6 resulted therefrom as well. For example, in the Spring of 2019, CN needed treatment not available  
 7 in Kentucky, forcing Candace to find out-of-state options. Candace scoured the options and found  
 8 a location as close to Kentucky as possible—in Durham, North Carolina. From April 2019 through  
 9 July 2019 Candace flew to Durham every other weekend to help with her daughter’s treatment and  
 10 recovery. She had to cash in her stocks and savings and stayed at a Ronald McDonald House while  
 11 in Durham because she could not afford a hotel. During this time, she lost the value of those stocks  
 12 and savings, but also, lost income and her business suffered.

13 226. Candace has done everything she can to help keep CN alive, and what the Instagram  
 14 product has done to her daughter has taken an incredible emotional, financial, and physical toll on  
 15 her life, as one would expect and as Meta could and should have anticipated.

## 16 VI. PLAINTIFFS’ CLAIMS

### 17 COUNT I – STRICT PRODUCT LIABILITY (Design Defect)

18 227. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 226  
 19 as if fully stated herein.

20 228. Meta’s product is defective because the foreseeable risks of harm posed by the  
 21 product’s design could have been reduced or avoided by the adoption of a reasonable alternative  
 22 design by Meta and the omission of the alternative design renders the product not reasonably safe.  
 23 This defective condition rendered the product unreasonably dangerous to persons or property and  
 24 existed at the time the product left Meta’s control, reached the user or consumer without substantial  
 25 change in the condition and its defective condition was a cause of Plaintiffs’ injury.

26 229. Meta designed, manufactured, marketed, and sold a social media product that was  
 27 unreasonably dangerous because it was designed to be addictive to the minor users to whom Meta  
 28 actively marketed and because the foreseeable use of Meta’s product causes mental and physical

harm to minor users.

230. Meta's product was unreasonably dangerous because it contained numerous design characteristics that are not necessary for the utility provided to the user but are unreasonably dangerous and implemented by Meta solely to increase the profits they derived from each additional user and the length of time they could keep each user dependent on its product.

**A. Inadequate Safeguards from Harmful and Exploitative Content**

231. As designed, Instagram algorithms and other product features are not reasonably safe because they affirmatively direct minor users to harmful and exploitative content while failing to deploy feasible safeguards to protect vulnerable teens from such harmful exposures. It is feasible to design an algorithm that substantially distinguishes between harmful and innocuous content and protects minor users from being exposed to harmful content without altering, modifying, or deleting any third-party content posted on Meta's social media product. The cost of designing Meta's algorithms to incorporate this safeguard would be negligible while benefit would be high in terms of reducing the quantum of mental and physical harm sustained by minor users and their families.

232. Meta also engages in conduct, outside of the algorithms themselves, that is designed to promote harmful and exploitative content as a means of increasing its revenue from advertisements. This includes but is not limited to efforts to encourage advertisers to design ads that appeal to minors, including children under the age of 13; and product design features intended to attract and engage minor users to these virtual spaces where harmful ad content is then pushed to those users in a manner intended to increase user engagement, thereby increasing revenue to Meta at the direct cost of user wellbeing.

233. Reasonable users (and their parents) would not expect that Meta's product would knowingly expose them to such harmful content and/or that Meta's product would direct them to harmful content at all, much less in the manipulative and coercive manner that they do. Meta has and continues to knowingly use its algorithms on users in a manner designed to affirmatively change their behavior, which methods are particularly effective on (and harmful to) Meta's youngest users, like CN.

**B. Failure to Verify Minor Users' Age and Identity**

234. As designed, Meta's product is not reasonably safe because they do not provide for adequate age verification by requiring users to document and verify their age and identity.

235. Adults frequently set up user accounts on Meta's social media product posing as minors to groom unsuspecting minors to exchange sexually explicit content and images, which frequently progresses to sexual exploitation and trafficking.

236. Minor users of social media and their parents do not reasonably expect that prurient adults set up fraudulent accounts on Meta's social media product and pose as minors for malign purposes.

237. Likewise, minor users who are under the age of 13 and/or whose parents have taken affirmative steps to keep them away from Meta's product often open multiple accounts, such that Meta knows or has reason to know that the user is underage and/or does not have parental permission to use its product. Meta already has the information and means it needs to ascertain with reasonable certainty each user's actual age and, at least in some cases, Meta utilizes these tools to investigate, assess, and report on percentages and totals of underage users for internal assessment purposes. They simply choose to do nothing about that information as it relates to the specific, underaged users themselves.

238. By way of example only, Meta has dashboards that enable it to identify and track every detail of user activity by date, location, and age—not the age provided to Meta upon account opening, but rather, "Age prediction" technologies Meta has developed and that can determine age with reasonable certainty based on user data, online activity, and/or similar sources of information Meta collects with regard to every Meta user on a constant and ongoing basis.

239. Again, Meta exercises an unprecedented level of control over its users and possesses an unprecedented level of knowledge—including the estimated actual age of each user, irrespective of what a user states when opening an account. Meta cannot, in good faith, disclaim knowledge or responsibility for the harms its social media product is causing, including the harms it caused to CN and that are at issue in this Complaint.

240. Moreover, reasonably accurate age and identity verification is not only feasible but

1 widely deployed by online retailers and internet service providers.

2 241. The cost of incorporating age and identify verification into Meta's product would  
3 be negligible, whereas the benefit of age and identity verification would be a substantial reduction  
4 in severe mental health harms, sexual exploitation, and abuse among minor users of Meta's  
5 product.

6 **C. Inadequate Parental Control and Monitoring**

7 242. Meta's product is also defective for lack of parental controls, permission, and  
8 monitoring capability available on many other devices and applications.

9 243. Meta's product is designed with specific product features intended to prevent and/or  
10 interfere with parents' reasonable and lawful exercise of parental control, permission, and  
11 monitoring capability available on many other devices and applications.

12 **D. Intentional Direction of Minor Users to Harmful and Exploitative Content**

13 244. Default "recommendations" communicated to new teenage users, including CN,  
14 purposefully steered her toward content Meta knew to be harmful to children of her age and gender.

15 245. Ad content pushed to new teenage users, including CN, because of their age and  
16 vulnerability, purposefully steer those users toward content Meta knows to be harmful to children  
17 of their age and gender.

18 **E. Inadequate Protection of Minors from Sexual Exploitation and Abuse**

19 246. Meta's product is not reasonably safe because it does not protect minor users from  
20 sexually explicit content and images or report sex offenders to law enforcement or allow users'  
21 parents to readily report abusive users to law enforcement.

22 247. Parents do not expect their children will use Meta's product to exchange sexually  
23 explicit content and images, and minor users do not expect that prurient adults pose as minors for  
24 malign purposes or that exchange of such content will be deleterious to their personal safety and  
25 emotional health.

26 248. Minor users of Meta's product lack the cognitive ability and life experience to  
27 identify online grooming behaviors by prurient adults and lack the psychosocial maturity to decline  
28 invitations to exchange salacious material.

249. Meta’s product is unreasonably dangerous and defective as designed because it allows minor children to use “public” profiles, in many cases default “public” profiles, that can be mass messaged by anonymous and semi-anonymous adult users for the purposes of sexual exploitation, and grooming, including the sending of encrypted, disappearing messages and cash rewards through Meta’s integrated design features.

#### F. Design of Addictive Social Media Products

250. As designed, Meta’s social media product is addictive to minor users as follows: When minors use design features such as “likes” it cause their brains release dopamine which creates short term euphoria. However, as soon as dopamine is released, minor users’ brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated and their euphoria is countered by dejection. In normal stimulatory environments, this dejection abates, and neutrality is restored. However, Meta’s algorithms are designed to exploit users’ natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria. As this pattern continues over a period of months and the neurological baseline to trigger minor users’ dopamine responses increases, they continue to use Instagram, not for enjoyment, but simply to feel normal. Once they stop using Instagram, minor users experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

251. Addiction is not restricted to a substance abuse disorders. Rather, the working definition of addiction promulgated in the seminal article *Addictive behaviors: Etiology and Treatment* published by the American Psychological Association in its 1988 *Annual Review of Psychology* defines addiction as,

a repetitive habit pattern that increases the risk of disease and/or associated personal and social problems. Addictive behaviors are often experienced subjectively as ‘loss of control’ – the behavior contrives to occur despite volitional attempts to abstain or moderate use. These habit patterns are typically characterized by immediate gratification (short term reward), often coupled with delayed deleterious effects (long term costs). Attempts to change an addictive behavior (via treatment or self-initiation) are typically marked with high relapse rates.

252. Addiction researchers agree that addiction involves six core components: (1) salience—the activity dominates thinking and behavior; (2) mood modification—the activity

modifies/improves mood; (3) tolerance—increasing amounts of the activity are required to achieve previous effects; (4) withdrawal—the occurrence of unpleasant feelings when the activity is discontinued or suddenly reduced; (5) conflict—the activity causes conflicts in relationships, in work/education, and other activities; and (6) relapse—a tendency to revert to earlier patterns of the activity after abstinence or control.

253. Social media addiction has emerged as a problem of global concern, with researchers all over the world conducting studies to evaluate how pervasive the problem is. Addictive social media use is manifested when a user (1) becomes preoccupied by social media (salience); (2) uses social media in order to reduce negative feelings (mood modification); (3) gradually uses social media more and more in to get the same pleasure from it (tolerance/craving); (4) suffers distress if prohibited from using social media (withdrawal); (5) sacrifices other obligations and/ or causes harm to other important life areas because of their social media use (conflict/functional impairment); and (6) seeks to curtail their use of social media without success (relapse/loss of control).

254. The Bergen Facebook Addiction Scale (BFAS) was specifically developed by psychologists in to assess subjects' social media use using the aforementioned addiction criteria, and is by far the most widely used measure of social media addiction. Originally designed for Facebook, BFAS has since been generalized to all social media. BFAS has been translated into dozens of languages, including Chinese, and is used by researchers throughout the world to measure social media addiction.

255. BFAS asks subjects to consider their social media usage with respect to the six following statements and answer either (1) very rarely, (2) rarely, (3) sometimes, (4) often, or (5) very often,

- a. You spend a lot of time thinking about social media or planning how to use it.
- b. You feel an urge to use social media more and more.
- c. You use social media in order to forget about personal problems.
- d. You have tried to cut down on the use of social media without success.

1 online, and its algorithms and other product features are designed to maximize the time users spend  
2 using the product by directing them to content that is progressively more and more stimulative.  
3 Meta enhances advertising revenue by maximizing users' time online through a product design  
4 that addicts them to the platform. However, reasonable minor users and their parents do not expect  
5 that on-line social media platforms are psychologically and neurologically addictive.

6 259. It is feasible to make Meta's product less addictive to minor users by limiting the  
7 frequency and duration of access and suspending service during sleeping hours.

8 260. At negligible cost, Meta could design software that limits the frequency and  
9 duration of minor users' screen use and suspends service during sleeping hours; the benefit of  
10 minor users maintaining healthy sleep patterns would be a significant reduction in depression,  
11 attempted and completed suicide and other forms self-harm among this vulnerable age cohort.

12 **G. Inadequate Notification of Parents of Dangerous and Problematic Social Media Usage**  
13 **by Minor Users**

14 261. Meta's product is not reasonably safe as designed because it does not include any  
15 safeguards to notify users and their parents of usage that Meta knows to be problematic and likely  
16 to cause negative mental health effects to users, including excessive passive use and use disruptive  
17 of normal sleep patterns. This design is defective and unreasonable because:

18 262. It is reasonable for parents to expect that social media companies that actively  
19 promote their platforms to minors will undertake reasonable efforts to notify parents when their  
20 child's use becomes excessive or occurs during sleep time. It is feasible for Meta to design a  
21 product that identifies a significant percentage of its minor users who are using the product more  
22 than three hours per day or using it during sleeping hours at negligible cost.

23 263. Meta's product is not reasonably safe as designed because, despite numerous  
24 reported instances of child sexual solicitation and exploitation by adult users, Meta has not  
25 undertaken reasonable design changes to protect underage users from this abuse, including  
26 notifying parents of underage users when they have been messaged or solicited by an adult user or  
27 when a user has sent inappropriate content to minor users.

28 264. Meta's entire business is premised upon collecting and analyzing user data and it is

feasible to use Meta's data and algorithms to identify and restrict improper sexual solicitation, exploitation and abuse by adult users.

265. Moreover, it is reasonable for parents to expect that platforms such as Instagram, which actively promote its services to minors, will undertake reasonable efforts to identify users suffering from mental injury, self-harm, or sexual abuse and implement technological safeguards to notify parents by text, email, or other reasonable means that their child is in danger.

266. As a proximate result of these dangerous and defective design attributes of Meta's product, CN suffered severe mental harm. Plaintiffs did not know, and in the exercise of reasonable diligence could not have known, of these defective design in Meta's product until 2022.

267. As a result of these dangerous and defective design attributes of Meta's product, Plaintiffs CN and Candace Wuest, have suffered emotional distress and pecuniary hardship due to their daughter's mental harm resulting from her social media addiction.

268. Meta is further liable to Plaintiffs for punitive damages based upon the willful and wanton design of its product that was intentionally marketed and sold to underage users, whom they knew would be seriously harmed through their use of Instagram.

## **COUNT II – STRICT PRODUCT LIABILITY (Failure to Warn)**

269. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 268 as if fully stated herein.

270. Meta's product is defective because of inadequate instructions or warnings because the foreseeable risks of harm posed by the product could have been reduced or avoided by the provision of reasonable instructions or warnings by the manufacturer and the omission of the instructions or warnings renders the product not reasonably safe. This defective condition rendered the product unreasonably dangerous to persons or property, existed at the time the product left Meta's control, reached the user or consumer without substantial change in the condition in which it was sold, and was a cause of Plaintiffs' injury.

271. Meta's product is unreasonably dangerous and defective because it contains no warning to users or parents regarding the addictive design and effects of Instagram.

272. Meta's social media product relies on highly complex and proprietary algorithms

1 that are both undisclosed and unfathomable to ordinary consumers, who do not expect that social  
2 media platforms are physically and/or psychologically addictive.

3 273. The magnitude of harm from addiction to Meta's product is horrific, ranging from  
4 simple diversion from academic, athletic, and face-to-face socialization to sleep loss, severe  
5 depression, anxiety, self-harm, and suicide.

6 274. The harms resulting from minors' addictive use of social media platforms have  
7 been not only well-documented in the professional and scientific literature, but Meta had actual  
8 knowledge of such harms.

9 275. Meta's product is unreasonably dangerous because it lacks any warnings that  
10 foreseeable product use can disrupt healthy sleep patterns or specific warnings to parents when  
11 their child's product usage exceeds healthy levels or occurs during sleep hours. Excessive screen  
12 time is harmful to adolescents' mental health and sleep patterns and emotional well-being.  
13 Reasonable and responsible parents are not able to accurately monitor their child's screen time  
14 because most adolescents own or can obtain access to mobile devices and engage in social media  
15 use outside their parents' presence.

16 276. It is feasible for Meta's product to report the frequency and duration of their minor  
17 users' screen time to their parents without disclosing the content of communications at negligible  
18 cost, whereas parents' ability to track the frequency, time and duration of their minor child's social  
19 media use are better situated to identify and address problems arising from such use and to better  
20 exercise their rights and responsibilities as parents.

21 277. Meta knew about these harms, knew that users and parents would not be able to  
22 safely use its product without warnings, and failed to provide warnings that were adequate to make  
23 the product reasonably safe during ordinary and foreseeable use by children.

24 278. As a result of Meta's failure to warn, CN suffered severe mental harm, leading to  
25 physical injury from her use of Instagram.

26 279. As a result of Meta's failure to warn, Plaintiffs CN and Candace Wuest, have  
27 suffered emotional distress and pecuniary hardship due to their daughter's mental harm resulting  
28 from social media addiction.

1       280. Meta is further liable to Plaintiffs for punitive damages based upon its willful and  
2 wanton failure to warn of known dangers of its product that was intentionally marketed and sold  
3 to teenage users, whom they knew would be seriously harmed through their use of Instagram.

4                                   **COUNT III – NEGLIGENCE**

5       281. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 280  
6 as if fully stated herein.

7       282. At all relevant times, Meta had a duty to exercise reasonable care and caution for  
8 the safety of individuals using its product, such as CN.

9       283. Meta owes a heightened duty of care to minor users of its social media product  
10 because adolescents' brains are not fully developed, which results in a diminished capacity to make  
11 good decisions regarding their social media usages, eschew self-destructive behaviors, and  
12 overcome emotional and psychological harm from negative and destructive social media  
13 encounters.

14       284. As a product manufacturer marketing and selling products to consumers, Meta  
15 owed a duty to exercise ordinary care in the manufacture, marketing, and sale of its product,  
16 including a duty to warn minor users and their parents of hazards that Meta knew to be present,  
17 but not obvious, to underage users and their parents.

18       285. As a business owner, Meta owes its users who visit Meta's social media platform  
19 and from whom Meta's derive billions of dollars per year in advertising revenue a duty of ordinary  
20 care substantially similar to that owed by physical business owners to its business invitees.

21       286. Meta was negligent, grossly negligent, reckless and/or careless in that they failed  
22 to exercise ordinary care and caution for the safety of underage users, like CN, using its Instagram  
23 product.

24       287. Meta was negligent in failing to conduct adequate testing and failing to allow  
25 independent academic researchers to adequately study the effects of its product and levels of  
26 problematic use amongst teenage users. Meta has extensive internal research indicating that its  
27 product is harmful, causes extensive mental harm and that minor users are engaging in problematic  
28 and addictive use that their parents are helpless to monitor and prevent.

288. Meta is negligent in failing to provide adequate warnings about the dangers associated with the use of social media products and in failing to advise users and their parents about how and when to safely use its social media platform and features.

289. Meta is negligent in failing to fully assess, investigate, and restrict the use of Instagram by adults to sexually solicit, abuse, manipulate, and exploit minor users of its Instagram product.

290. Meta is negligent in failing to provide users and parents the tools to ensure its social media product is used in a limited and safe manner by underage users.

291. As a result of Meta's negligence, CN suffered severe mental harm from her use of Instagram.

292. As a result of Meta's negligence, Plaintiffs CN and Candace Wuest have suffered emotional distress and pecuniary hardship due to their daughter's mental harm resulting from social media addiction.

293. Meta is further liable to Plaintiffs for punitive damages based upon its willful and wanton conduct toward underage users, including CN, whom they knew would be seriously harmed through the use of its social media product.

**COUNT IV – VIOLATIONS OF CALIFORNIA’S UNFAIR COMPETITION LAW**  
**(Cal. Bus. & Prof. Code §§ 17200, *et seq.*)**

294. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 293 as if fully stated herein.

295. Defendant Meta is a corporation, and thus a “person,” as defined by California Business & Professions Code § 17201.

296. The UCL prohibits all conduct that is unlawful, unfair, or fraudulent.

297. Defendant's conduct is unlawful as set forth in Counts I–III, above.

298. Defendant's conduct is unlawful also because it has knowledge of users under the age of 13 on its platform and, in fact, actively targets, markets to, and encourages use of its social media product by minors under the age of 13.

299. Defendant engaged in fraudulent and deceptive business practices in violation of

1 the UCL by promoting products to underage users, including CN, while concealing critical  
2 information regarding the addictive nature and risk of harm these products pose. Defendant knew  
3 and should have known that its statements and omissions regarding the addictive and harmful  
4 nature of its product were misleading and therefore likely to deceive the members of the public  
5 who use Defendant's product and who permit their underage children to use Defendant's product.  
6 Had Candace Wuest known of the dangerous nature of Defendant's product, they would have  
7 taken early and aggressive steps to stop or limit their daughter's use of Defendant's product.

8 300. Defendant's practices are unfair and violate the UCL because they offend  
9 established public policy, and because the harm these practices cause to consumers greatly  
10 outweighs any benefits associated with them.

11 301. Defendant's conduct has resulted in substantial injuries that Plaintiffs could not  
12 reasonably have avoided because of Defendant's deceptive conduct. This substantial harm is not  
13 outweighed by any countervailing benefits to consumers or competition.

14 302. As a direct and proximate result of the foregoing acts and practices, Defendant has  
15 received, or will receive, income, profits, and other benefits, which it would not have received if  
16 it had not engaged in the violations of the UCL described herein. As a direct and proximate result  
17 of the foregoing acts and practices, Defendant has also obtained an unfair advantage over similar  
18 businesses that have not engaged in such practices.

19 303. As a result of Defendant's UCL violations, Plaintiffs have suffered injury in fact  
20 and lost money as set forth herein.

21 304. Accordingly, Plaintiffs seek injunctive and equitable relief to halt and remedy  
22 Defendant's unlawful, fraudulent, and unfair conduct.

### 23 **COUNT V – UNJUST ENRICHMENT**

24 305. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 304  
25 as if fully stated herein.

26 306. As a result of Defendant's conduct detailed herein, Defendant received a benefit.  
27 Because Defendant's advertising profits are directly tied to the number of user accounts and the  
28 amount of time those users spend on Instagram, Defendant benefited directly from CN's

1 problematic use of its product, both from the amount of time she spent on Instagram and from her  
2 creation of multiple Instagram accounts.

3 307. It would be unjust and inequitable for Defendant to retain the ill-gotten benefits at  
4 Plaintiffs' expense, in light of Defendant's acts and omissions described herein.

5 308. Accordingly, Plaintiffs seek damages in an amount to be proven at trial.

## 6 **COUNT VI – INVASION OF PRIVACY**

### 7 **(California Constitutional Right to Privacy, Cal. Const. Art. 1, § 1)**

8 309. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 308  
9 as if fully stated herein.

10 310. Defendant intentionally intruded upon Plaintiffs' solitude, seclusion, or private  
11 affairs by knowingly designing its product with features that were intended to, and did, frustrate  
12 parents' ability to monitor and control their children's social media usage.

13 311. These intrusions are highly offensive to a reasonable person, particularly given  
14 Defendant's interference with the fundamental right of parenting and its exploitation of children's  
15 special vulnerabilities for commercial gain.

16 312. Plaintiffs were harmed by Defendant's invasion of privacy, as detailed herein.

17 313. Plaintiffs therefore seek compensatory and punitive damages in amounts to be  
18 determined at trial, as well as injunctive relief requiring Defendant to cease the harmful practices  
19 described throughout this complaint.

## 20 **COUNT VII – FRAUD AND FRAUDULENT CONCEALMENT**

21 314. Plaintiffs reallege each and every allegation contained in paragraphs 1 through 313  
22 as if fully stated herein.

23 315. At all times relevant, Meta designed, developed, operated, marketed, made publicly  
24 available, and benefitted from its Instagram social media product and therefore owed a duty of  
25 reasonable care to avoid causing harm to those that it used it.

26 316. Defendant's marketing, promotions, and advertisements contained deceptive  
27 and/or misleading statements, implications, images, and portrayals that the Instagram product was  
28 safe, improved social connectivity, and improved the mental and physical health of its users. For

example, in April of 2018, Meta CEO Mark Zuckerberg testified under oath to Congress that Meta does not design its products to be addictive and that he is not concerned with social media addiction as it relates to teens. He stated,

I view our responsibility as not just building services that people like but as building services that are good for people and good for society as well ... we study a lot of effects of well-being, of our tools, and broader technology, and like any tool there are good and bad uses of it. What we find in general is that if you are using social media to build relationships then that is associated with all the long term measures of well-being that you'd intuitively think of ... but if you are using the internet and social media to just passively consume content and are not engaging with other people then it doesn't have those positive effects and it could be negative.<sup>31</sup>

317. In November of 2020, Meta CEO Mark Zuckerberg again testified under oath to Congress that Meta does not design its products to be addictive and that research on addictiveness of social media has not been conclusive.<sup>32</sup>

318. In March of 2021, Meta CEO Mark Zuckerberg testified under oath to Congress that Instagram is not addictive and that it does not cause harm to children and teens.<sup>33</sup>

319. On September 30, 2021, Meta's Head of Safety, Antigone Davis, testified under oath to Congress that Instagram is not addictive<sup>34</sup> and repeatedly denied the existence of causal research regarding harms to teens from Instagram use and testified that Meta's overreaching goal is child safety: "We work tirelessly to put in place the right policies, products, and precautions so [young users] have a safe and positive experience."<sup>35</sup>

320. On December 8, 2021, Instagram's president Adam Mosseri provided written testimony and testified under oath to Congress that Instagram is not addictive<sup>36</sup> and he downplayed the significance of the documents disclosed by the Facebook Whistleblower, characterizing Meta's

<sup>31</sup> <https://www.youtube.com/watch?v=AB4mB-K7-xY>

<sup>32</sup> <https://www.tampafp.com/great-news-facebook-is-not-designed-to-be-addictive-according-to-zuckerberg/>

<sup>33</sup> <https://www.congress.gov/117/meeting/house/111407/documents/HHRG-117-IF16-Transcript-20210325.pdf>, at p. 67, 107, 175.

<sup>34</sup> <https://www.rev.com/blog/transcripts/facebook-head-of-safety-testimony-on-mental-health-effects-full-senate-hearing-transcript> ("Sept. 30, 2021, Senate Hearing Transcript"), at 2:06:35; *see also id.* at 02:07:44 and 02:07:59 (Ms. Davis also denied that Meta's business model includes getting users engaged for longer amounts of time).

<sup>35</sup> *Id.* at 24:58, 01:47:29, 1:48:07, 1:48:20, 2:10:47, 33:46, and 40:41.

<sup>36</sup> <https://www.commerce.senate.gov/2021/12/protecting-kids-online-instagram-and-reforms-for-young-users>, recording of December 8, 2021 Senate Hearing.

1 numerous studies as involving input from small numbers of teens and not measuring “causal  
2 relationships between Instagram and real-world issues.”<sup>37</sup> He testified that Meta’s overarching  
3 goal is child safety.<sup>38</sup>

4 321. Meta’s Terms of Use also represent that Meta is “Fostering a positive, inclusive,  
5 and safe environment,” and represent that Meta uses its “teams and systems ... to combat abuse  
6 and violations of our Terms and policies, as well as harmful and deceptive behavior. We use all  
7 the information we have—including our information—to try to keep our platform secure.”

8 322. The above statements are indicative and reflective of the deceptive and/or  
9 misleading statements Meta has been feeding to the general public for years in order to convince  
10 people that its products were safe for use by teenagers, like CN. When in fact, Meta knew that its  
11 products were not safe. Meta knew that its products are addictive and harmful to a significant  
12 portion of users, including teen girls, like CN.

13 323. Meta’s public statements and other marketing and advertising materials failed to  
14 disclose the truth, in fact, Meta has gone to considerable lengths to conceal the truth. This includes  
15 creating a corporate culture that convinced thousands of Meta employees that if they went public  
16 with what they knew they would lose their careers, no one would believe them, and that Meta  
17 would then lock down internal communications in a manner that would make it impossible for the  
18 employees left behind to work toward effectuating change from the inside. When in fact, Meta  
19 never intended to allow change from the inside. It intended to pursue engagement and growth at  
20 the expense of human lives and did everything it could to hide these facts from the world.

21 324. Meta lied about the harm its products are causing.

22 325. Meta’s omissions were also misleading and deceptive in every respect, for example,  
23 talking about how Instagram makes some users’ lives better and ignoring the fact that Instagram  
24 is causing serious harms to other users, including but not limited to what Meta calls SSI, Suicide  
25 and Self-Injury. Meta failed to disclose, and spent years actively concealing, the fact that its social

26  
27 <sup>37</sup> <https://www.commerce.senate.gov/services/files/3FC55DF6-102F-4571-B6B4-01D2D2C6F0D0>, written  
Testimony of Adam Mosseri, Head of Instagram, dated December 8, 2021.

28 <sup>38</sup> <https://www.npr.org/2021/12/08/1062576576/instagrams-ceo-adam-mosseri-hears-senators-brush-aside-his-promises-to-self-poli>

media products cause addiction, sleep deprivation, anxiety, depression, anger, eating disorders, self-harm, suicidal ideation, and suicide, among other harms.

326. These representations were false and material, as were Meta's omissions. These representations were communicated to Plaintiffs via the media, the internet, advertising, websites, and the platforms themselves and Plaintiffs reasonably relied on these representations to their detriment. Meta intended for members of the general public, including Plaintiffs, to rely on these misrepresentations and omissions, and Plaintiffs did, and these misrepresentations and omissions were a substantial factor in causing Plaintiffs' harm.

### **DEMAND FOR JURY TRIAL**

Plaintiffs hereby demand a trial by jury.

### **PRAYER FOR RELIEF**

WHEREFORE, Plaintiffs prays for judgment against Meta for monetary damages for the following harm:

1. Past physical and mental pain and suffering of CN, in an amount to be more readily ascertained at the time and place set for trial.
2. Loss of future income and earning capacity of CN.
3. Past and future medical expenses of CN.
4. Past physical and mental pain and suffering of Candace Wuest, in an amount to be more readily ascertained at the time and place set for trial.
5. Monetary damages suffered by Candace Wuest.
6. Punitive damages.
7. For the reasonable costs and attorney and expert/consultant fees incurred in this action.
8. For injunctive relief.
9. For such other and further relief as this Court deems just and equitable.

1 DATED this 25th day of July 2022.

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen,

a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users, especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## **II. JURISDICTION AND VENUE**

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Colorado and purposely avail themselves of the benefits of transacting business with Colorado residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Colorado and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Colorado relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Colorado.

18. Defendants advertise extensively in Colorado, through contractual relationships with third-party “partners” who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are

prohibited from providing their products to users under the age of 13, by encouraging and allowing its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Colorado for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Colorado-related activities over the last several years arising from the use of their defective and inherently dangerous social media products by Colorado residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the District of Colorado.

### **III. PARTIES**

#### **Plaintiff**

21. Plaintiff Kelli Cahoone is an individual domiciled in Denver, Colorado, and the custodial parent of her seventeen-year-old daughter E.R. Denver, Colorado, is Plaintiffs' true, fixed, and permanent home and principal establishment, and to which Plaintiffs' have the intention of returning whenever they are absent therefrom. Plaintiffs intend to remain in Denver, Colorado, indefinitely. Plaintiff brings this suit on behalf of herself and on behalf of E.R., pursuant to FED. R. CIV. P. 17.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of this LLC Defendant.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

7

“Meta Quest”), among other technologies related to Meta’s various platforms. Defendant Meta is the sole member of this LLC Defendant.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing. Defendant Meta is the sole member of this LLC Defendant.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### **IV. GENERAL FACTUAL ALLEGATIONS**

##### **A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.**

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and

adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants’ social media products exploit minor users’ diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users’ incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users’ frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become “popular.” Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predisposes teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today’s adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

35. One way that Meta's platforms addict minors is as follows: When minors use design features such as "likes" it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users' brains adapt by reducing or "downregulating" the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.

- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager’s proclivity to engage in protracted upward social comparison while on social media is compounded by Meta’s deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta’s key features that make the platforms highly addictive include the use of intermittent variable rewards (“IVR”) and its Facial Recognition System (“FRS”).

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms’ addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram’s notification

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users' dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta's use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today's youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children's Online Privacy Protection Act, or "COPPA," regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain "verifiable parental consent" from parents prior to the

collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta’s algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover

(recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta’s unabashed willingness to target children—in the face of its conscious, long-standing, plainly deficient age-verification protocols—demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or “MSI,” which emphasizes users’ connections’ interactions, e.g., likes and comments, and gives greater significance to the interactions of

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an “amplification algorithm” to execute engagement-based ranking, which considers a post’s likes, shares, and comments, as well as a respective user’s past interactions with similar content, and exhibits the post in the user’s newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity,

19

teen-girl Instagram users say the platform makes thoughts of “suicide and self-injury” worse. Seventeen percent of teen-girl Instagram users say the platform makes “[e]ating issues” worse. Instagram users are twice as likely to develop an eating disorder as those who don’t use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms’ adverse impact to teenage users’ well-being, the absence of impulse control often renders teens powerless to oppose the platforms’ allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today’s parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook’s most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort’s mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents’ mental health, sleep patterns, emotional well-being. Defendants’ products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child’s product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child’s screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents’ presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to

62. Plaintiff E.R. is a seventeen year old girl who has been a heavy user of the Meta platform(s).

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to E.R. 24 hours a day, E.R. developed a compulsion to engage with the Meta Platform(s), and began getting less and less sleep.

66. Defendants have designed the Meta platform(s), including through the use of disappearing or time-sensitive messaging features, to frustrate parents like Kelli Cahoone from exercising their rights and duties as parents to monitor and limit their children's use of the Meta platform(s).

68. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business

78. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

24

80. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

81. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

82. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

83. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

84. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

85. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

86. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;

- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

87. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

88. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

89. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

90. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

91. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

92. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

93. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such

as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

94. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

95. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

96. Plaintiff’s injuries—physical, emotional, and economic—were reasonably foreseeable to DEFENDANTS at the time of the products’ design, marketing, and operation.

97. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS’ sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products’ condition.

98. Plaintiff was injured as a direct and proximate result of the platform’s defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff’s harms.

99. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys’ fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION**  
**STRICT LIABILITY - FAILURE TO WARN**

100. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

101. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

102. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

103. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

104. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

105. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;

- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

106. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;

- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

107. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

108. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

109. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

110. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

111. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

112. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

113. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

114. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

115. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including social media compulsion, multiple periods of suicidal ideation, ADHD, an eating disorder(s), body dysmorphia, depression, and a reduced inclination or ability to sleep, among other harmful effects.

116. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta's platforms comes from third parties. Meta has a "Youth Portal" website that does

not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

117. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

118. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat,

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> Id.

sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

119. Finally, the guide mentions the body image harms social media inflicts, but it solely blames influencers as the cause, rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

120. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

121. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

122. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

123. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, fees, and all such other relief as the Court deems proper.

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s resident State, Colorado. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of the State of Colorado.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

127. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

129. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

131. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;

- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

132. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

133. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

134. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **FOURTH CAUSE OF ACTION** **PRODUCTS LIABILITY - NEGLIGENT DESIGN**

135. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

136. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

141. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

143. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2)

intermittent variable rewards (a system of “likes”, comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

144. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

145. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

146. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

149. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

41

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;

158. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

159. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

160. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

161. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

164. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm,

insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

165. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

166. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

167. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,

- iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

168. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a

danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

169. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

170. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

171. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

172. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

173. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

174. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating

disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

175. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

176. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

177. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

178. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

179. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

180. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected,

tested, and disseminated was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner.

182. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

183. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;

- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

184. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

185. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

186. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

187. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION  
NEGLIGENCE AND/OR GROSS NEGLIGENCE**

188. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

189. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

190. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

191. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

192. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

194. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

197. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and

harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

202. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

203. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

204. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

205. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

207. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes,"

comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;

- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video

content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;

- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;

211. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

212. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes social media compulsion, multiple periods of suicidal ideation, ADHD, an eating disorder(s), body dysmorphia, depression, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

213. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

214. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **EIGHTH CAUSE OF ACTION** **NEGLIGENT MISREPRESENTATION**

215. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

216. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

217. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

218. DEFENDANTS were negligent, reckless, and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

219. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

220. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

221. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and

- ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

222. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

223. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

224. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

225. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

226. DEFENDANTS intended for Plaintiff to rely on these representations.

227. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

228. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

229. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

230. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

231. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes social media compulsion, multiple periods of suicidal ideation, ADHD, an eating disorder(s), body dysmorphia, depression, and a reduced inclination or ability to sleep, among other harmful effects.

232. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **NINTH CAUSE OF ACTION FRAUD**

233. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

234. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

235. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

236. DEFENDANTS' marketing, promotions, and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

237. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them>.

238. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta’s marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

239. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users’ wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

240. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;

- ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- o. The platforms cause the mental and physical health harms as listed above;
- p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

242. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

243. The above representations were communicated to Plaintiff.

244. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

245. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the

use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

246. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

247. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

248. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

249. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

250. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TENTH CAUSE OF ACTION  
FRAUDULENT CONCEALMENT**

251. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

252. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

253. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

254. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

255. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

256. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

257. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

258. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

259. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

260. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

261. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

262. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

263. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

264. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

265. Plaintiff did not know of the facts that DEFENDANTS concealed.

266. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

267. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

268. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

269. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

270. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: social media compulsion, multiple periods of suicidal ideation, ADHD, an eating disorder(s), body dysmorphia, depression, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

271. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

272. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

273. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

274. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of the State of Colorado.

275. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

276. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

277. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

278. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

279. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

280. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;
- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

281. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

282. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

283. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWELFTH CAUSE OF ACTION**  
**UNJUST ENRICHMENT**

284. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

285. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

286. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

287. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and

- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

288. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;

- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

289. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

290. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

291. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

292. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

293. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

294. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and

the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

295. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

296. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

297. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

298. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

299. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

300. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

302. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

303. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

304. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

305. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and

deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

a. COLO. REV. STAT. ANN. § 6-1-101 *et seq.* (Colorado Consumer Protection Act).

306. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

307. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

308. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

309. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

310. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

311. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

312. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

313. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

314. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

315. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

316. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

317. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

318. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

319. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

320. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

321. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

322. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

323. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

324. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION**  
**BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

325. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

326. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

327. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

328. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

329. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

330. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

331. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users' mental health.

332. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

333. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

334. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

335. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

336. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

337. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

338. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

339. Plaintiff was injured as a direct and proximate result of DEFENDANTS’ breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS’ failure to deliver merchantable products in the form of addiction and other negative health consequences.

340. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION  
FITNESS FOR A PARTICULAR PURPOSE**

341. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

342. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

343. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

344. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

345. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

347. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

348. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

349. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

350. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

351. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

352. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

353. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

354. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

355. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

356. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

357. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

358. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

360. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional

distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

363. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

364. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

365. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

366. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

367. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

368. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

369. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

370. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

371. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes social media compulsion, multiple periods of suicidal ideation, ADHD, an eating disorder(s), body dysmorphia, depression, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

372. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

373. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

374. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

376. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

378. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

381. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

383. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

90

were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

385. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

386. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

387. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

388. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

389. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes social media

compulsion, multiple periods of suicidal ideation, ADHD, an eating disorder(s), body dysmorphia, depression, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

390. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

391. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

392. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

393. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

394. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

395. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

396. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction,

depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

398. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

399. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

400. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

401. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

402. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

403. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed

to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

404. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes social media compulsion, multiple periods of suicidal ideation, ADHD, an eating disorder(s), body dysmorphia, depression, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

405. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWENTIETH CAUSE OF ACTION MEDICAL MONITORING**

406. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

407. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state, Colorado. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Colorado.

408. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

409. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-

harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

410. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

411. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

412. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

413. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

414. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

415. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

416. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

417. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by

suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

419. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

420. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

421. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

422. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

423. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

424. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

426. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

428. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook

and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts that continue to this day.

429. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;

10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: July 26, 2022

Respectfully Submitted,

06/07/2022	7	ORDER REFERRING CASE to Magistrate Judge N. Reid Neureiter. Pursuant to 28 U.S.C. § 636(b)(1)(A) and (B) and Fed. R. Civ. P. 72(a) and (b), this case is referred to the assigned United States Magistrate Judge to (1) convene a scheduling conference under Fed. R. Civ. P. 16(b) and enter a scheduling order meeting the requirements of Local Civ. R. 16.2, (2) conduct such status conferences and issue such orders necessary for compliance with the scheduling order, including amendments or modifications of the scheduling order upon a showing of good cause, (3) hear and determine pretrial matters, including discovery and other non-dispositive motions, (4) conduct hearings, including evidentiary hearings, and submit proposed findings of fact and recommendations for rulings on dispositive motions, and (5) pursuant to Local Civ. R. 16.6 and at the discretion of the Magistrate Judge, convene such early neutral evaluation and/or settlement conferences and direct related procedures as may facilitate resolution of this case without the necessity of a motion or prior authorization of the undersigned. SO ORDERED by Judge Regina M. Rodriguez on 6/7/2022. Text Only Entry (rmrja) (Entered: 06/07/2022)
06/09/2022	<a href="#"><u>8</u></a>	ORDER SETTING SCHEDULING/PLANNING CONFERENCE by Magistrate Judge N. Reid Neureiter on 9 June 2022. Proposed Scheduling Order due 8/30/2022. ## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be

exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users.

especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## **II. JURISDICTION AND VENUE**

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Colorado and purposely avail themselves of the benefits of transacting business with Colorado residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Colorado and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Colorado relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Colorado.

18. Defendants advertise extensively in Colorado, through contractual relationships with third-party “partners” who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their products to users under the age of 13, by encouraging and allowing

its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Colorado for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Colorado-related activities over the last several years arising from their defective and inherently dangerous social media products by Colorado residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the District of Colorado.

### **III. PARTIES**

#### **Plaintiff**

21. Plaintiff Malinda Harris is an individual residing in Castle Rock, Colorado, and the mother and custodial parent of her fourteen-year-old daughter B.J. Plaintiff brings this suit on behalf of herself and on behalf of B.J., pursuant to FED. R. CIV. P. 17.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### **IV. GENERAL FACTUAL ALLEGATIONS**

##### **A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.**

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature,

considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become "popular." Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and

admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predispositions teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today's adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta's platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users' brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media,

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's key features that make the platforms highly addictive include the use of intermittent variable rewards ("IVR") and its Facial Recognition System ("FRS").

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta's feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms' addictiveness.

43. Engineered to meet the evolving demands of the "attention economy,"<sup>5</sup> a term used to describe the supply and demand of a person's attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its "Like" button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta's IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram's notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users' dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta's use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta’s algorithms. Thus, Defendants generate revenue based upon

the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has

expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta’s unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or “MSI,” which emphasizes users’ connections’ interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an “amplification algorithm” to execute engagement-based ranking, which considers a post’s likes, shares, and comments, as well as a respective user’s past interactions with similar content, and exhibits the post in the user’s newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing content because it’ll increase its number of users and the time users stay on the platform

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact

---

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage

users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff B.J. is a fourteen-year-old girl who is a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). B.J.'s interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to B.J. 24 hours a day, B.J. began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to B.J., a minor user of the Meta platform(s), B.J. subsequently developed injuries including, but not limited to, multiple suicide attempts, self-harm (e.g., burning herself and cutting herself), multiple periods of suicidal ideation, an eating disorder(s), depression, anxiety, fatigue, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platform(s), including through the use of disappearing or time-sensitive messaging features, to frustrate parents like Malinda Harris from exercising their rights and duties as parents to monitor and limit their children's use of the Meta platform(s).

67. Defendants have designed the Meta platforms(s) to allow minors to use, become addicted to, and abuse their products without the consent of the users' parents, like Malinda Harris.

68. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

69. Neither Malinda Harris nor B.J. were aware of the clinically addictive and mentally harmful effects of Meta platform(s) when B.J. began to use the products.

70. Defendants not only failed to warn B.J. and Malinda Harris of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the

safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

71. As a result of B.J.'s extensive and problematic use of the Meta platform(s), she has developed numerous mental health conditions that she still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

72. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

73. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

74. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

75. Facebook and Instagram were designed and intended to be used as social media platforms.

76. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus,

ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

77. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

78. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

79. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

80. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

81. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

82. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

83. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

84. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

85. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

86. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;

- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;

- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

87. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

88. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

89. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

90. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of

exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

91. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

92. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

93. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

94. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

95. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

96. Plaintiff's injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

97. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

98. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

99. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION  
STRICT LIABILITY - FAILURE TO WARN**

100. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

101. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

102. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

103. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

104. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

105. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

106. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

107. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information,

research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

108. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

109. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

110. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

111. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

112. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

113. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

114. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate

information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

115. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including multiple suicide attempts, self-harm (e.g., burning herself and cutting herself), multiple periods of suicidal ideation, an eating disorder(s), depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects.

116. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta's platforms comes from third parties. Meta has a "Youth Portal" website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, "Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off."<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users' mental health.

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> Id.

By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

117. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child’s natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

118. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

119. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose

weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

120. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

121. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

122. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

123. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

127. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

129. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

131. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

132. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

133. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

134. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT DESIGN**

135. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

136. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

137. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

138. Facebook and Instagram were designed and intended to be used as social media platforms.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

140. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

141. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body

dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

143. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

144. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

145. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

146. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

147. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

148. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

149. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

150. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;

- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

154. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

155. A reasonable company under the same or similar circumstances would have designed a safer product.

156. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes multiple suicide attempts, self-harm (e.g., burning herself and cutting herself), multiple periods of suicidal ideation, an eating disorder(s), depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects.

157. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

158. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

159. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

160. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

161. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

164. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

165. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

166. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
  - f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
- 167. Facebook and Instagram are also defective for failing to warn users that:
  - a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
  - e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and

- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

168. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

169. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

170. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

171. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

172. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

173. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

174. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

175. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

176. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

177. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

178. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

179. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

180. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner.

182. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

183. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

185. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

187. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION  
NEGLIGENCE AND/OR GROSS NEGLIGENCE**

189. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

190. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

191. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

192. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

194. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

197. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

198. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

199. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

200. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

201. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

202. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

203. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

204. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

205. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

207. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles,

which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;

- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;
- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

208. DEFENDANTS' acts and omissions constitute gross negligence, because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

209. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

210. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and

young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

211. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

212. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes multiple suicide attempts, self-harm (e.g., burning herself and cutting herself), multiple periods of suicidal ideation, an eating disorder(s), depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

213. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

214. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTH CAUSE OF ACTION**  
**NEGLIGENT MISREPRESENTATION**

215. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

216. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

217. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

218. DEFENDANTS were negligent, reckless and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

219. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

220. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
221. Meta also omitted to inform users that, as it knew or should have known:
- a. Engagement-based ranking and intermittent variable rewards are
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
  - e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and

f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

222. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

223. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

224. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

225. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

226. DEFENDANTS intended for Plaintiff to rely on these representations.

227. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

228. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

229. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing

Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

230. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

231. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes multiple suicide attempts, self-harm (e.g., burning herself and cutting herself), multiple periods of suicidal ideation, an eating disorder(s), depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harms.

232. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **NINTH CAUSE OF ACTION FRAUD**

233. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

234. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

235. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

236. DEFENDANTS’ marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta’s investor relations page states that “Facebook’s mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what’s going on in the world, and to share and express what matters to them.”<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users’ mental and physical health, which Meta has long known.

237. DEFENDANTS’ marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

238. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta’s marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

239. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users’ wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

240. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- i. Facebook makes body-image issues worse for one-third of girls;
- j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

241. Meta also omitted/failed to inform users that, as it knew or should have known:

- m. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and

- vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- n. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- o. The platforms cause the mental and physical health harms as listed above;
- p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

242. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

243. The above representations were communicated to Plaintiff.

244. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

245. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive

reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

246. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

247. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

248. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

249. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

250. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TENTH CAUSE OF ACTION**  
**FRAUDULENT CONCEALMENT**

251. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

252. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

253. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

254. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

255. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

256. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

257. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

258. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

259. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

260. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

261. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

262. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;

- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

263. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and

f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

264. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

265. Plaintiff did not know of the facts that DEFENDANTS concealed.

266. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

267. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

268. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

269. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

270. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: multiple suicide attempts, self-harm (e.g., burning herself and cutting herself), multiple periods of suicidal ideation, an eating disorder(s), depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

271. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

272. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

273. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

274. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of Plaintiff's respective State.

275. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

276. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

277. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers

and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

278. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

279. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

280. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;
- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

281. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

282. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

283. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWELFTH CAUSE OF ACTION**  
**UNJUST ENRICHMENT**

284. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

285. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

286. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

287. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

288. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

289. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

290. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

291. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

292. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

293. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

294. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

295. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

296. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

297. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective States.

298. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

299. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

300. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

302. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

303. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

304. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

305. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. COLO. REV. STAT. ANN. § 6-1-101 *et seq.* (Colorado Consumer Protection Act).

306. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were

aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

307. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

308. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

309. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

310. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

311. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

312. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

313. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

314. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

315. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

316. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

317. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

318. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

319. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

321. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

323. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

**FIFTEENTH CAUSE OF ACTION  
BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

326. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

327. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

328. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

329. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

330. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

331. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users' mental health.

332. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

333. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

334. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

335. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

336. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

337. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

338. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

339. Plaintiff was injured as a direct and proximate result of DEFENDANTS’ breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS’ failure to deliver merchantable products in the form of addiction and other negative health consequences.

340. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys’ fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

341. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

342. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

343. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

344. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

345. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

347. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

348. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

349. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

350. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

351. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

352. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

353. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

354. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

355. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

356. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

357. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

358. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

360. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

363. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

364. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

365. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

366. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

367. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

368. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably

careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

369. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

370. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

371. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes multiple suicide attempts, self-harm (e.g., burning herself and cutting herself), multiple periods of suicidal ideation, an eating disorder(s), depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

372. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

373. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

374. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

376. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

378. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

381. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

382. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

383. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

384. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

385. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

386. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

387. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

388. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

389. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes multiple suicide attempts, self-harm (e.g., burning herself and cutting herself), multiple periods of suicidal ideation, an eating disorder(s), depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

390. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

391. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

392. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

393. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

394. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

395. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

396. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating

disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

398. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

399. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

400. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

401. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

402. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

403. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

404. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes multiple suicide attempts, self-harm (e.g., burning herself and cutting herself), multiple periods of suicidal ideation, an eating disorder(s), depression, anxiety, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

405. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWENTIETH CAUSE OF ACTION  
MEDICAL MONITORING**

406. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

407. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's resident state.

408. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

409. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

410. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

411. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and

- ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

412. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

413. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

414. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or

lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

415. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

416. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

417. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

419. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by

suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

420. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

421. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

422. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

423. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

424. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

426. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

428. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

429. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

## **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

## **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: June 6, 2022

Respectfully Submitted,

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of children and adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. (“Meta”). Meta was originally incorporated in Delaware on July 29, 2004, as “TheFacebook, Inc.” On September 20, 2005, the company changed its name to “Facebook, Inc.” On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta’s and its subsidiaries’ own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand “Meta” contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks’ overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the

knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their product to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their product to promote

problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. One Meta product, [www.facebook.com](https://www.facebook.com) (“Facebook”) and its respective interrelated app, ranks among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platform roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of Facebook designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world's social networking population, the only social media platform to reach over half of all social media users.

7. A user’s “feed” on both Facebook is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Facebook.

8. Over the past decade or so, Meta has added features and promoted the use of auto playing short videos and temporary posts on Facebook, which are referred to as “Reels”.

9. Facebook notifies users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and be exposed to content selected by the platform to maximize the length of time and amount of content viewed by the user. Facebook includes many other harm causing features, as discussed below.

10. Plaintiff brings claims of strict liability based upon Defendants' defective design of Facebook that renders it not reasonably safe for ordinary consumers in general and children in particular. It is technologically feasible to design a social media product that substantially

decrease the incidence and magnitude of harm to ordinary consumers and children arising from their foreseeable use of Defendants' product with a negligible increase in production cost.

11. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to adolescent users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media product.

12. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media product and their failure to warn of such dangers. Defendants knew, or in the exercise of ordinary care, should have known that Facebook was harmful to a significant percentage of their adolescent users and failed to re-design their product to ameliorate these harms or warn adolescent users and their parents of dangers arising out of the foreseeable use of their product. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

13. The addictive qualities of Defendants' product and their harmful algorithms are not fully known or appreciated by adolescent users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that Facebook and Defendants' other platforms and products cause significant harm to its users, especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## **II. JURISDICTION AND VENUE**

14. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

15. This Court has specific personal jurisdiction over Defendants because these Defendants transact business in the State of Colorado and purposely avail themselves of the benefits of transacting business with Colorado residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Colorado and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

16. Defendants interface with a significant percentage of the population of the State of Colorado relating to use of the product at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Colorado.

17. Defendants advertise extensively in Colorado, through contractual relationships with third-party “partners” who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its product on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their product to users under the age of 13, by encouraging and allowing its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Colorado for whom those devices are intended.

18. Defendants have earned millions of dollars in annual revenue from their Colorado related activities over the last several years arising from their defective and inherently dangerous social media product by Colorado residents, including Plaintiff.

19. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the District of Colorado.

### **III. PARTIES**

#### **A. Plaintiff**

20. Plaintiff Cecelia Tesch is a current individual residing in Pueblo, Colorado, and is the mother and custodial parent of her thirteen-year-old daughter R.P. All events giving rise to Plaintiff's claims—including her initial exposure to Facebook, the onset of her addiction, and her injuries as a result of her use of Facebook—occurred while she resided within the State of Colorado. Plaintiff brings this suit on behalf of herself and R.P., pursuant to FED. R. CIV. P. 17.

#### **B. Defendant Meta Platforms, Inc.**

21. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

22. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

#### **C. Subsidiary Defendants**

23. Facebook Holdings, LLC ("Facebook 1") was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta's supporting and international endeavors, and its principal place of business is in Menlo Park, California.

24. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

25. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

26. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

27. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011 and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### **IV. GENERAL FACTUAL ALLEGATIONS**

##### **A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.**

28. Emerging research shows that the human brain is still developing during adolescence in ways consistent with children and adolescents’ demonstrated psychosocial immaturity. Specifically, children and adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and

30. The algorithms in Defendants' social media products exploit adolescent users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their adolescent users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design

33. One way that Meta's platforms addict children and adolescents is as follows: When children and adolescents use design features such as "likes" it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: adolescent users' brains adapt by reducing or "downregulating" the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

34. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger adolescent users' dopamine responses increases. Children and adolescents then continue to use Facebook, not for enjoyment, but simply to feel normal. When adolescent users attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

35. Addictive use of social media by children and adolescents is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among children and adolescents are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability);
- b. Tolerance, the need to spend more time using social media to satisfy the urge;

- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming;
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage;
- e. Continuing to use social media despite problems;
- f. Deceiving family members or others about the amount of time spent on social media;
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

36. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable adolescent users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

37. Defendants' products could feasibly report the frequency and duration of their adolescent users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their adolescent child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

38. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>.

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

39. The dangers associated with teenager’s proclivity to engage in protracted upward social comparison while on social media is compounded by Meta’s deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta’s key features that make the platform highly addictive include the use of intermittent variable rewards (“IVR”) and its Facial Recognition System (“FRS”).

40. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platform’s addictiveness.

41. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Facebook likely uses a similar feature. These designs take advantage of users’ dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

42. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

third-parties a billion individual facial recognition templates and is otherwise used by Meta to tag people in photos; (2) Meta's use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today's youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

### B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.

43. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

44. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg

himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

45. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta's algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

46. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user's smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet's infancy, Meta's algorithms are not based exclusively on user requests or even user inputs. Meta's algorithms combine the user's profile (e.g., the information posted by the user on the platform) and the user's dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user's interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts

51. Upon information in belief, at least as far back as 2019, Meta initiated, inter alia, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

52. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platform's adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platform's allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.conspan.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files11631713039?mod=bigtop-breadcrumb>

appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

53. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

54. Excessive screen time is harmful to children and adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platform unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most children and adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

55. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third-Parties.**

56. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of Facebook, not as the speaker or publisher of third-party content.

57. Plaintiff alleges that Defendants failed to warn adolescent users and their parents of known dangers arising from anticipated use of their social media platform. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

58. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

59. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third-parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of Facebook. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of Facebook, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

60. Plaintiff R.P. is a thirteen-year-old girl who is a heavy user of Facebook.

61. Shortly after registering to use Facebook at the age of seven, Plaintiff began engaging in addictive and problematic use of the platform(s). R.P. interest in any activity other than viewing and posting on Facebook progressively declined.

**FIRST CAUSE OF ACTION**  
**STRICT LIABILITY - DESIGN DEFECT**

71. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

73. Facebook was designed and intended to be used as a social media platform.

75. DEFENDANTS defectively designed the platform to specifically appeal to and children, adolescents and young adults, who were particularly unable to appreciate the risks by the platform, and particularly susceptible to harms from the product.

77. DEFENDANTS defectively designed Facebook that is inherently dangerous  
e it included features making the product addictive and likely to cause the mental and

physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (i.e., photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Facebook "Stories" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

78. DEFENDANTS defectively designed the platform and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platform. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

79. Facebook does not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook poses a risk of serious mental and physical health injuries as listed above.

80. The risks inherent in the design of Facebook significantly outweigh any benefits of such design.

81. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing the product without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

82. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platform and could have designed the platform to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS

designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

83. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platform, or other youth protecting features.

84. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing a platform that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform;
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;

- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

85. Instead, DEFENDANTS designed a platform that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

86. It is reasonable for parents to expect that social media products that actively promote their platform to children and adolescents will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the product to identify adolescent users who

as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

92. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

93. Plaintiff used Facebook as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for children and adolescents to use its product and were aware that children and adolescents were doing so.

94. Plaintiff’s injuries—physical, emotional, and economic—were reasonably foreseeable to DEFENDANTS at the time of the product’s design, marketing, and operation.

95. Facebook was defective and unreasonably dangerous when they left DEFENDANTS’ sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the product without any substantial change in the product’s condition.

96. Plaintiff was injured as a direct and proximate result of the platform’s defective design as described herein. The defective design of Facebook was a proximate cause of Plaintiff’s harms.

97. Plaintiff demands judgment against DEFENDANTS for compensatory damages including the costs of medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys’ fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION**  
**STRICT LIABILITY - FAILURE TO WARN**

98. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

99. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s

resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

100. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and/or benefited from platform that Plaintiff used.

101. Facebook was and is in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platform pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

102. DEFENDANTS were aware that Facebook posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of its platform.

103. Facebook is defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platform that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform; and
- b. Facebook makes body-image issues worse for one-third of girls;

104. Facebook is also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive;
  - ii. promote harmful social comparison;

- iii. promote negative, controversial, and/or emotionally activating content, promote negative, harmful, and/or dangerous interest groups and/or content creators;
  - iv. encourage bullying and conflict;
  - v. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm;
  - vi. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs).
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users;
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users.
- c. The platform causes the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of children and adolescents;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platform which are currently publicly unknown and hidden from users and governments.

105. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platform.

causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including body dysmorphia, eating disorder, self-harm, severe anxiety, depression, and a decrease in motivation to do school work or socialize with her family and peers.

114. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta’s platforms comes from third-parties. Meta has a “Youth Portal” website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platform, it fails to directly address any of the features or health risks listed above. The website states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third-parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

115. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> *Id.*

The is guide devoid of any mention of strong role that Facebook’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

119. On another Meta created website that proposes to “help children and young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook as a result of the product features listed above.

120. The platform’s lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

121. Plaintiff demands judgment against DEFENDANTS for compensatory damages, including the costs of medical monitoring to diagnose the platform-induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys’ fees, and all such other relief as the Court deems proper.

### **THIRD CAUSE OF ACTION** **STRICT LIABILITY - MANUFACTURING DEFECT**

122. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

123. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s resident State. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of Plaintiff’s respective State.

124. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and/or benefited from platform that Plaintiff used.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platform's output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platform and its features.

130. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook as described herein.

131. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook was a proximate cause of Plaintiff's harms.

132. Plaintiff demands judgment against DEFENDANTS for compensatory damages, including the cost of medical monitoring to diagnose the platform induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT DESIGN**

133. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

134. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

135. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and/or benefited from platform that Plaintiff used.

136. Facebook was designed and intended to be used as a social media platform.

- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed a platform that

159. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and/or benefited from platform that Plaintiff used.

160. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with children, adolescents and young adults.

161. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook. Facebook is highly addictive and likely to cause mental and physical injuries as listed above.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platform.

163. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook.

164. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platform's sign-up warnings, and through marketing, promoting and advertising of the platform including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform; and
- b. Facebook makes body-image issues worse for one-third of girls;

165. Facebook is also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive;
  - ii. promote harmful social comparison;
  - iii. promote negative, controversial, and/or emotionally activating content, promote negative, harmful, and/or dangerous interest groups and/or content creators;
  - iv. encourage bullying and conflict;
  - v. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm;
  - vi. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - j. inflict unrealistic and biased beauty standards upon users;
  - iii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platform causes the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of children and adolescents;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platform which are currently publicly unknown and hidden from users and governments.

166. The failure of DEFENDANTS to adequately warn about its defective product, and its efforts to misleadingly advertise through conventional and social media avenues, created a

184. DEFENDANTS' negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook was a substantial factor in causing Plaintiff's harms.

185. Plaintiff demands judgment against DEFENDANTS for compensatory, damages, including the costs of medical monitoring to diagnose the platform induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION**  
**NEGLIGENCE**

186. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

187. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

188. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

189. Facebook is the type of product that could endanger others if negligently made or promoted.

190. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platform to avoid causing harm to those that used Facebook.

191. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platform, of mental and physical health harms.

192. DEFENDANTS knew or should have known by the exercise of reasonable care, that children, adolescents and children and young people would be attracted to this product.

193. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with children, adolescents and young adults.

194. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook. Facebook are highly addictive and likely to cause mental and physical injuries as listed above.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platform.

196. DEFENDANTS knew or should have known that Facebook needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

197. DEFENDANTS knew or should have known that Facebook would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user’s feed based on engagement or “meaningful social interactions” rather than chronology); (2) intermittent variable rewards (a system of “likes”, comments, strategically timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (i.e., photo and video filters designed

202. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

203. DEFENDANTS knew or should have known that Facebook could cause serious risk of harm, particularly to young persons, children and adolescents.

204. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

205. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook;
- d. Failure to use reasonable care in the production/development of Facebook;
- e. Failure to use reasonable care in the operation of Facebook;
- f. Failure to use reasonable care in the coding/assembly of Facebook;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook;
- h. Failure to use reasonable care in the dissemination of Facebook without adequate warnings;

- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Facebook "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platform's power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content,

increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;

- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook for it to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm,

insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;

- q. Failure to subsequently remedy harm-causing features of the platform after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platform per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook;
- t. Failure to recall Facebook;
- u. All other failures, acts and omissions set forth herein.

206. DEFENDANTS' acts and omissions constitute negligence, because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

207. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

208. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that children and young people would try Facebook and quickly become addicted to Facebook, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

216. DEFENDANTS were negligent, reckless and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

217. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook was safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platform's mental and physical health impact;

218. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform; and
- b. Facebook makes body-image issues worse for one-third of girls.

219. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive;
  - ii. promote harmful social comparison;
  - iii. promote negative, controversial, and/or emotionally activating content;
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators;
  - v. encourage bullying and conflict;

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm; and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs).
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users; and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users.
- c. The platform causes the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of children and adolescents;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platform which are currently publicly unknown and hidden from users and governments.

220. These representations were false and omissions were material. The platform is unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

221. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

222. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platform.

223. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

224. DEFENDANTS intended for Plaintiff to rely on these representations.

225. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook.

226. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook.

227. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platform, Plaintiff would not have registered with them or used them.

228. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

229. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook as described herein. Such harm includes body dysmorphia, eating disorder, self-harm, severe anxiety, depression, and a decrease in motivation to complete tasks such as schoolwork or socialize with her family and peers, among other harmful effects.

230. Plaintiff demands judgment against DEFENDANTS for compensatory damages, including the costs of medical monitoring to diagnose the platform induced injuries at an earlier

- ii. promote harmful social comparison;
  - iii. promote negative, controversial, and/or emotionally activating content;
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators;
  - v. encourage bullying and conflict;
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm; and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs).
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users; and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platform causes the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of children and adolescents;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platform which are currently publicly unknown and hidden from users and governments.

240. These representations were false and material. These omissions also communicated falsehoods and were material. The platform is unsafe and were known by Meta to

242. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platform.

244. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platform poses an unreasonable risk of substantial mental and bodily injury; and because the platform made partial representations concerning the same subject matter as the omitted facts.

60

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform; and
- b. Facebook makes body-image issues worse for one-third of girls;

261. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive;
  - ii. promote harmful social comparison;
  - iii. promote negative, controversial, and/or emotionally activating content, promote negative, harmful, and/or dangerous interest groups and/or content creators;
  - iv. encourage bullying and conflict;
  - v. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm;
  - vi. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs).
- b. Face tracking and augmentation (image and video filters)
  - k. inflict unrealistic and biased beauty standards upon users;
  - iv. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users.
- c. The platform causes the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of children and adolescents;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and

f. The likelihood and intensity of these harmful effects are increased by other features and inner workings of the platform which are currently publicly unknown and hidden from users and governments.

262. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platform.

263. Plaintiff did not know of the facts that DEFENDANTS concealed.

264. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

265. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

266. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platform, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook.

267. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of Facebook, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook.

268. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: body dysmorphia, eating disorder, self-harm, severe anxiety, depression, and a decrease in motivation to complete tasks such as schoolwork or socialize with her family and peers, among other harmful effects, which may cause or contribute to additional disease.

269. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

270. Plaintiff demands judgment against DEFENDANTS for compensatory damages, including the costs of medical monitoring to diagnose the platform induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

271. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

272. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of Plaintiff's respective State.

273. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook to ensure a steady and growing customer base.

274. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platform (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

275. Plaintiff's addiction to the platform was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platform by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook that substantially contributed to the Plaintiff's injuries as alleged herein.

276. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platform as a wrongful, unlawful, and tortious means to make a profit.

277. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

278. DEFENDANTS' conspiracy involved:

- a. Developing a social media platform to be as addictive as possible, regardless of mental and physical health impacts;
- b. Suppressing internal and external efforts to research the harmful effects of this platform;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of this platform;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platform.

279. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

280. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

281. Plaintiff demands judgment against Defendants for compensatory damages, including the costs of medical monitoring to diagnose the platform induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWELFTH CAUSE OF ACTION**  
**UNJUST ENRICHMENT**

282. Plaintiff incorporates by reference each preceding and succeeding paragraph as although set forth fully at length herein.

283. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

284. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

285. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform; and
- b. Facebook makes body-image issues worse for one-third of girls;

286. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive;
  - ii. promote harmful social comparison;
  - iii. promote negative, controversial, and/or emotionally activating content;
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators;
  - v. encourage bullying and conflict;
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm; and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs).

- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platform causes the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of children and adolescents;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platform which are currently publicly unknown and hidden from users and governments.

287. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook.

288. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platform conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

289. The harm causing features listed above were the same platform components that increased Meta’s revenue—addiction and overuse of the platform directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff’s time, mental wellness, and physical health.

290. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

293. Plaintiff demands judgment against DEFENDANTS for compensatory damages, including the costs of medical monitoring to diagnose the platform induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

294. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

296. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

297. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

298. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

299. Plaintiff registered for and used FACEBOOK and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

300. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used Facebook resulting in the injuries as alleged herein.

301. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

302. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting children and adolescents and portraying Facebook as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

303. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their product. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent

representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the Colorado Consumer Protection Act, Colo. Rev. Stat. 6-1-113.

304. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

305. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook.

306. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

307. Plaintiff demands judgment against DEFENDANTS for compensatory damages, including the costs of medical monitoring to diagnose the platform induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

308. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

309. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

310. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

311. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

312. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platform Facebook was safe for their intended use and that it was safe for youth to use.

313. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook would improve users' mental health, sense of community, and emotional connectedness with others.

314. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook would conform to Meta's affirmations of fact, representations, promises, and descriptions.

315. As described herein, the platform actually uses features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

316. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook as alleged herein.

327. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

329. The platform is not fit for that use—or any other use—because they pose increased risks of substantial mental and physical injury resulting from the use of the product. When used as intended or reasonably foreseeable, Facebook adversely impact, worsen, or aggravate users’ mental health.

331. DEFENDANTS have unlawfully breached the platform’s implied warranty of merchantability because Facebook were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

74

333. Plaintiff has had sufficient direct dealings with DEFENDANTS via its website, apps, platform, or through retailers acting as agents authorized to distribute Facebook (Apple/the “App Store”) to establish privity.

334. Further, Plaintiff was a third-party beneficiary of the platform's agreements with other entities for the distribution of Facebook to consumers. Specifically, Plaintiff is the intended beneficiary of the platform's implied warranties. The platform's product is manufactured with the express purpose and intent of being made accessible to consumers.

335. Plaintiff would not have used Facebook, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

336. DEFENDANTS' breach of these warranties were a substantial factor in causing Plaintiff's harms.

337. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to deliver a merchantable product in the form of addiction and other negative health consequences.

338. Plaintiff demands judgment against DEFENDANTS for compensatory damages, including the costs of medical monitoring to diagnose the platform induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

339. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

340. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

341. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

342. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

343. Plaintiff intended to use Facebook as safe social media platform and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

344. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the product was required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook would improve users' mental health, sense of community, and emotional connectedness with others.

345. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platform.

346. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platform.

347. As described herein, DEFENDANTS breached this implied warranty because the platform uses features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

356. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

357. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platform and its features.

358. DEFENDANTS knew or should have known through the exercise of reasonable care, that children, adolescents and children and young people would be attracted to this product.

359. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with children, adolescents and young adults.

360. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook. Facebook is fine-tuned to addict users, and forcefully cause physical and mental health harms.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platform.

362. DEFENDANTS knew or should have known that Facebook needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised,

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform; and
- b. Facebook makes body-image issues worse for one-third of girls.

409. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive;
  - ii. promote harmful social comparison;
  - iii. promote negative, controversial, and/or emotionally activating content;
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators;
  - v. encourage bullying and conflict;
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm; and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs).
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users; and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platform causes the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of children and adolescents;

- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and inner workings of the platform which are currently publicly unknown and hidden from users and governments.

410. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

411. The collaboration of these features multiplies the platform’s power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying, and promoting conflict, and multiplying harm in other ways.

412. The features combine to create a user interface of endless, auto-playing, image and video content that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

413. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more

419. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

420. These diagnostic procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

421. Plaintiff has suffered an increased risk of physical, mental, and emotional harms. Anxiety, depression, eating disorders, body dysmorphia, self-harm (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such product causes on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended due to use of this platform.

422. In addition, Plaintiff has suffered the economic loss of the need to incur reasonably medically necessary diagnostic testing for the early detection of illness or injury because of her exposure to Defendants' platforms.

423. Plaintiff demands judgment against DEFENDANTS for the costs of medical monitoring damages to diagnose the platform induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and that this product caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

## VIII. DEMAND FOR A JURY TRIAL

## IX. PRAYER FOR RELIEF

90

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platform, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, the cost of diagnostic testing for the early detection of injury, and other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding reasonable attorneys' fees;
7. Awarding experts' fees;
8. Awarding costs of litigation;
9. Awarding pre-judgment and post-judgment interest at the lawful rate;
10. A trial by jury on all issues of the case;
11. Awarding medical monitoring costs or programs; and
12. Any other relief as this court may deem equitable and just, or that may be warranted.

DATE: July 20, 2022

Respectfully Submitted,

/s/ Kevin Hannon

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be

exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users,

especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## **II. JURISDICTION AND VENUE**

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Delaware and purposely avail themselves of the benefits of transacting business with Delaware residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Delaware and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Delaware relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Delaware.

18. Defendants advertise extensively in Delaware, through contractual relationships with third-party "partners" who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their products to users under the age of 13, by encouraging and allowing

its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Delaware for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Delaware-related activities over the last several years arising from their defective and inherently dangerous social media products by Delaware residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the District of Delaware.

### **III. PARTIES**

#### **Plaintiff**

21. Plaintiff Jessica Guerrero is an currently individual residing in Melfa, Virginia, and the mother and custodial parent of her seventeen-year-old daughter S.G. Plaintiff and S.G. moved from the State of Delaware to the State of Virginia in June 2021; however, as stated, a substantial part of the events giving rise to Plaintiff's claims—including her initial exposure to the Meta platform(s), the onset of her addiction, and her injuries as a result of her use of the Meta platform(s)—occurred while she resided within the State of Delaware. Plaintiff brings this suit on behalf of herself and S.G., pursuant to FED. R. CIV. P. 17.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC

(Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company

on April 7, 2012, in Delaware. Currently, the company's principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., ("Siculus") was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus's principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents' demonstrated psychosocial immaturity. Specifically, adolescents' brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing "pruning"—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain's frontal lobes change to help the brain work faster and more efficiently, improving the "executive" functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain's composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain's

executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become "popular." Many teens feel deep insecurity and are self-

conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predisposes teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today’s adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta’s platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users’ brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants’ algorithms are designed to exploit users’ natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.

- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

key features that make the platforms highly addictive include the use of intermittent variable rewards (“IVR”) and its Facial Recognition System (“FRS”).

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms’ addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram’s notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users’ dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

identify and tag people in photos; (2) Meta’s use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as

Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta's algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user's smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet's infancy, Meta's algorithms are not based exclusively on user requests or even user inputs. Meta's algorithms combine the user's profile (e.g., the information posted by the user on the platform) and the user's dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about

that user's interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta's key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta's unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or "MSI," which emphasizes users' connections' interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an "amplification algorithm" to execute engagement-based ranking, which considers a post's likes, shares, and comments, as well as a respective user's past interactions with similar content, and exhibits the post in the user's newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook's Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

polarizing content because it'll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse

---

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage

users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

**V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff S.G. is a seventeen-year-old girl who is a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). S.G.'s interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to S.G. 24 hours a day, S.G. began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to S.G., a minor user of the Meta platform(s), S.G. subsequently developed injuries including, but not limited to, attempted suicide, multiple periods of suicidal ideation, an eating disorder(s), severe anxiety, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platform(s), including through the use of disappearing or time-sensitive messaging features, to frustrate parents like Jessica Guerrero from exercising their rights and duties as parents to monitor and limit their children's use of the Meta platform(s).

67. Defendants have designed the Meta platforms(s) to allow minors to use, become addicted to, and abuse their products without the consent of the users' parents, like Jessica Guerrero.

68. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

69. Neither Jessica Guerrero nor S.G. were aware of the clinically addictive and mentally harmful effects of Meta platform(s) when S.G. began to use the products.

70. Defendants not only failed to warn S.G. and Jessica Guerrero of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

71. As a result of S.G.'s extensive and problematic use of the Meta platform(s), she has developed numerous mental health conditions that she still struggles with until this day.

## **VI. CAUSES OF ACTION**

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

72. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

73. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

74. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

75. Facebook and Instagram were designed and intended to be used as social media platforms.

76. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder,

anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

77. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

78. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

79. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

80. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

81. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

82. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

83. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

84. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

85. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

86. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;

- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;

- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

87. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

88. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

89. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

90. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of

exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

91. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

92. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

93. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

94. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

95. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

96. Plaintiff's injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

97. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

98. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

99. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SECOND CAUSE OF ACTION  
STRICT LIABILITY - FAILURE TO WARN**

100. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

101. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

102. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

103. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

104. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

105. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

106. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

107. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information,

research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

108. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

109. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

110. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

111. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

112. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

113. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

114. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate

information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

115. Plaintiff was injured as a direct and proximate result of DEFENDANTS’ failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user’s neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including attempted suicide, multiple periods of suicidal ideation, an eating disorder(s), severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

116. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta’s platforms comes from third parties. Meta has a “Youth Portal” website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health.

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> *Id.*

By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

117. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child’s natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

118. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

119. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose

weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

120. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

121. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

122. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

123. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

127. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

129. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

131. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

132. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

133. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

134. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION  
PRODUCTS LIABILITY - NEGLIGENT DESIGN**

135. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

136. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

137. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

138. Facebook and Instagram were designed and intended to be used as social media platforms.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

140. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

141. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body

dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

143. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

144. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

145. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

146. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

147. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

148. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

149. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

150. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;

- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

154. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

155. A reasonable company under the same or similar circumstances would have designed a safer product.

156. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes attempted suicide, multiple periods of suicidal ideation, an eating disorder(s), severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

157. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

158. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

159. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

160. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

161. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers

of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

164. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

165. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

166. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

167. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

168. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a

danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

169. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

170. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

171. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

172. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

173. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

174. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating

disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

175. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

176. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

177. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

178. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

179. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

180. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected,

tested, and disseminated was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner.

182. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

183. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

184. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

185. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

186. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

187. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION**  
**NEGLIGENCE AND/OR GROSS NEGLIGENCE**

188. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

189. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

190. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

191. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

192. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

194. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

197. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

198. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

199. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based

ranking (sorting content on a user’s feed based on engagement or “meaningful social interactions” rather than chronology); (2) intermittent variable rewards (a system of “likes”, comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

200. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

201. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

202. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social

comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

203. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

204. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

205. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

207. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;

- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;

- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;
- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

208. DEFENDANTS' acts and omissions constitute gross negligence, because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

209. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

210. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

211. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

212. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes attempted suicide, multiple periods of suicidal ideation, an eating disorder(s), severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

213. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

214. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTH CAUSE OF ACTION**  
**NEGLIGENT MISREPRESENTATION**

215. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

216. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

217. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

218. DEFENDANTS were negligent, reckless and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

219. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

220. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

221. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,

- iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

222. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

223. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

224. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

225. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

226. DEFENDANTS intended for Plaintiff to rely on these representations.

227. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

228. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

229. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

230. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

231. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes attempted suicide, multiple periods of suicidal ideation, an eating disorder(s), severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

232. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINTH CAUSE OF ACTION**  
**FRAUD**

233. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

234. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

235. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

236. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what

matters to them.”<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users’ mental and physical health, which Meta has long known.

237. DEFENDANTS’ marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

238. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta’s marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

239. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users’ wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

240. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
  - h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
  - i. Facebook makes body-image issues worse for one-third of girls;
  - j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
241. Meta also omitted/failed to inform users that, as it knew or should have known:
- m. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - n. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - o. The platforms cause the mental and physical health harms as listed above;

- p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

242. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

243. The above representations were communicated to Plaintiff.

244. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

245. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

246. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior

knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

247. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

248. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

249. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

250. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TENTH CAUSE OF ACTION FRAUDULENT CONCEALMENT**

251. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

252. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

253. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

254. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

255. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

256. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

257. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

258. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

259. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

260. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

261. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

262. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

263. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,

- iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

264. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

265. Plaintiff did not know of the facts that DEFENDANTS concealed.

266. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

267. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

268. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

269. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

270. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: attempted suicide, multiple periods of suicidal ideation, an eating disorder(s), severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

271. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

272. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

273. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

274. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of Plaintiff's respective State.

275. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

276. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

277. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

278. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

279. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

280. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;

- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

281. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

282. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

283. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWELFTH CAUSE OF ACTION UNJUST ENRICHMENT**

284. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

285. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

286. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

287. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

288. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);

- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

289. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

290. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

291. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

292. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

293. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

294. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

295. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

296. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

297. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective States.

298. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

299. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

300. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

302. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

303. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

304. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

305. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of

their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

a. DEL. CODE ANN. TITLE 6 § 2532 *et seq.* (Deceptive Trade Practices Act).

306. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

307. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

308. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

309. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

310. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

311. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

312. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

313. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

314. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

315. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

316. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

317. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

318. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

319. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

320. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

321. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

322. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

323. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

324. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION**  
**BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

325. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

326. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

327. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

328. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

329. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

330. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

331. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

332. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

333. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

334. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

335. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

336. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

337. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

338. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

339. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to deliver merchantable products in the form of addiction and other negative health consequences.

340. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

341. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

342. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

343. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

344. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

345. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

347. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

348. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

349. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

350. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

351. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

352. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

353. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

354. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

355. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

356. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

357. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

358. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

360. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

363. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

364. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

365. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

366. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

367. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

368. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

369. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

370. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

371. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes attempted suicide, multiple periods of suicidal ideation, an eating disorder(s), severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

372. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

373. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

374. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

376. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

378. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

381. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

382. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

383. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

384. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

385. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

386. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

387. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

388. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted,

as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

389. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes attempted suicide, multiple periods of suicidal ideation, an eating disorder(s), severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

390. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

391. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

392. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

393. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

394. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

395. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

396. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

398. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

399. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

400. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

401. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

402. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

403. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

404. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes attempted suicide, multiple periods of suicidal ideation, an eating disorder(s), severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

405. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWENTIETH CAUSE OF ACTION MEDICAL MONITORING**

406. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

407. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's resident state.

408. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

409. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

410. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

411. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
- vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

412. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

413. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of

exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

414. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

415. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

416. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

417. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

419. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

420. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

421. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

422. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

423. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully

until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

424. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

426. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

428. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

429. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: June 7, 2022

Respectfully Submitted,

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies’ profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. (“Meta”). Meta was originally incorporated in Delaware on July 29, 2004, as “TheFacebook, Inc.” On September 20, 2005, the company changed its name to “Facebook, Inc.” On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta’s and its subsidiaries’ own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand “Meta” contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks’ overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be

exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users,

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Florida and purposely avail themselves of the benefits of transacting business with Florida residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Florida and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Florida relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Florida.

5

holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become "popular." Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predispositions teenagers to frequently engage in upward social comparison processes, that is,

identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today’s adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta’s platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users’ brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants’ algorithms are designed to exploit users’ natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users’ dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users attempt to stop using Defendants’ social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online

through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression,

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

deprivation, and distress, resulting in an overall aggravation of one’s mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison’s perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta’s platforms’ progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager’s proclivity to engage in protracted upward social comparison while on social media is compounded by Meta’s deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta’s key features that make the platforms highly addictive include the use of intermittent variable rewards (“IVR”) and its Facial Recognition System (“FRS”).

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta’s use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more “attractive.”

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms’ addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram’s notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users’ dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta’s use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today's youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children's Online Privacy Protection Act, or "COPPA," regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain "verifiable parental consent" from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta's algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information posted by the user on the platform) and the user’s dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user’s interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta’s key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a

valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta’s unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or “MSI,” which emphasizes users’ connections’ interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an “amplification algorithm” to execute engagement-based ranking, which considers a post’s likes, shares, and comments, as well as a respective user’s past interactions with similar content, and exhibits the post in the user’s newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook’s Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing content because it’ll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

## **V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff Naomi Charles is a twenty-two year old woman who is a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). Plaintiff's interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to Plaintiff 24 hours a day, Plaintiff began getting less and less sleep.

65. As a proximate result of her addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to Plaintiff, initially a minor user of the Meta platform(s), Plaintiff subsequently developed injuries including, but not limited to, attempted suicide, multiple periods of suicidal ideation, depression, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platforms(s) to allow minor users, as Plaintiff was, to become addicted to and abuse their products without the consent of the users' parents.

67. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

68. Plaintiff was not aware of the clinically addictive and mentally harmful effects of Meta platform(s) when Plaintiff began to use the products.

69. Defendants not only failed to warn Plaintiff of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

70. As a result of Plaintiff's extensive and problematic use of the Meta platform(s), she has developed numerous mental health conditions that she still struggles with until this day.

**VI. CAUSES OF ACTION**

**FIRST CAUSE OF ACTION**  
**STRICT LIABILITY - DESIGN DEFECT**

71. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

72. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

73. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

74. Facebook and Instagram were designed and intended to be used as social media platforms.

75. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

76. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

77. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

78. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

79. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

80. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

81. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

82. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features

listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

83. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

84. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

85. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;

- i. Notification to parents regarding their child’s extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user’s feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user’s feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user’s feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user’s feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user’s feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

86. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

87. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

88. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

89. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

90. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or

lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

91. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

92. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

93. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

94. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

95. Plaintiff's injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

96. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

97. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

98. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **SECOND CAUSE OF ACTION** **STRICT LIABILITY - FAILURE TO WARN**

99. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

100. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

101. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

102. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

103. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

104. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

105. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
- vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

106. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

107. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

108. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

109. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

110. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

111. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

112. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

113. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

114. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of

reality, and suffer injuries including attempted suicide, multiple periods of suicidal ideation, and depression, among other harmful effects.

115. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta’s platforms comes from third parties. Meta has a “Youth Portal” website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

116. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> *Id.*

naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

117. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

118. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

119. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

120. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

121. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

122. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **THIRD CAUSE OF ACTION** **STRICT LIABILITY - MANUFACTURING DEFECT**

123. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

124. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

resident State. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

125. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

126. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

127. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

128. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

129. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

130. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;

- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

131. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

132. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

133. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **FOURTH CAUSE OF ACTION** **PRODUCTS LIABILITY - NEGLIGENT DESIGN**

134. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

135. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

136. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

137. Facebook and Instagram were designed and intended to be used as social media platforms.

138. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

140. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

141. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users

appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

143. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

144. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

145. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

146. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more

successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

147. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

148. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

149. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

150. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;

- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;

s. Many other less harmful alternatives.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

154. A reasonable company under the same or similar circumstances would have designed a safer product.

155. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes attempted suicide, multiple periods of suicidal ideation, depression, difficulty sleeping, among other harmful effects, which may cause or contribute to additional disease.

156. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

157. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

158. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

159. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

160. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

161. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in

light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

164. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

165. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

166. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one’s comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers’ appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

167. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

168. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

169. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

170. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

171. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

172. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

173. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

174. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

175. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

176. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

177. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

178. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

179. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

180. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

182. Without limitation, examples of DEFENDANTS’ breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices (“GMPs”);
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms’ output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

183. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

184. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

185. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff’s harms.

186. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION**  
**NEGLIGENCE AND/OR GROSS NEGLIGENCE**

187. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

188. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

189. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

190. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

191. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

192. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

194. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

197. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

198. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video

filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

199. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

200. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

201. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

202. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user;

204. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- 52

- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;

- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

207. DEFENDANTS' acts and omissions constitute gross negligence, because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

208. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

209. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

210. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

211. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes attempted suicide, multiple periods of suicidal

ideation, depression, difficulty sleeping, among other harmful effects, which may cause or contribute to additional disease.

212. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

213. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **EIGHTH CAUSE OF ACTION** **NEGLIGENT MISREPRESENTATION**

214. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

215. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

216. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

217. DEFENDANTS were negligent, reckless and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

218. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

219. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

220. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

221. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

222. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

223. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

224. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

225. DEFENDANTS intended for Plaintiff to rely on these representations.

226. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

227. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

228. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

229. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

230. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes attempted suicide, multiple periods of suicidal ideation, depression, difficulty sleeping, among other harmful effects, which may cause or contribute to additional disease.

231. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date

to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **NINTH CAUSE OF ACTION FRAUD**

232. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

233. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

234. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

235. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

236. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

237. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta's marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

238. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users' wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

239. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;

- i. Facebook makes body-image issues worse for one-third of girls;
  - j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
240. Meta also omitted/failed to inform users that, as it knew or should have known:
- m. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - n. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - o. The platforms cause the mental and physical health harms as listed above;
  - p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and

- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

241. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

242. The above representations were communicated to Plaintiff.

243. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

244. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

245. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the

platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

246. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

247. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

248. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

249. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TENTH CAUSE OF ACTION FRAUDULENT CONCEALMENT**

250. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

251. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

252. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

253. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

254. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

255. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

256. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

257. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

258. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

259. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

260. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

261. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

262. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,

- iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

263. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

264. Plaintiff did not know of the facts that DEFENDANTS concealed.

265. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

266. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

267. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

268. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

269. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: attempted suicide, multiple periods of suicidal ideation, depression, difficulty sleeping, among other harmful effects, which may cause or contribute to additional disease.

270. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

271. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **ELEVENTH CAUSE OF ACTION CONSPIRACY TO COMMIT FRAUD**

272. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

273. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of Plaintiff's respective State.

274. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

275. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

276. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

277. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

278. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

279. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;

- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

280. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

281. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

282. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

## **TWELFTH CAUSE OF ACTION UNJUST ENRICHMENT**

283. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

284. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

285. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

286. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

287. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);

- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

288. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

289. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

290. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

291. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

292. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

293. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

294. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

295. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

296. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective States.

297. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

298. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

299. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

300. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

301. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

302. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

303. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

304. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of

their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. FLA. STAT. ANN. § 501.204 *et seq.*;
- b. FLA. STAT. ANN. § 817.41 *et seq.*; and
- c. FLA. STAT. ANN. § 817.06 *et seq.*

305. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

306. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

307. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

308. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

309. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

310. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

311. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

312. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

313. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

314. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

315. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

316. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

317. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

318. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

319. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

320. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

321. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

322. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

323. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION  
BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

324. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

325. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

326. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

327. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

328. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

329. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

330. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

331. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

332. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

333. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

334. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

335. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

336. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

337. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

338. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to deliver merchantable products in the form of addiction and other negative health consequences.

339. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

340. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

341. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

342. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

343. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

344. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

347. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

349. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

80

351. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

352. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

353. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

354. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

355. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

356. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

357. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

358. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

360. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

363. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

364. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

365. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

366. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

367. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

368. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

369. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

370. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes attempted suicide, multiple periods of suicidal ideation, depression, difficulty sleeping, among other harmful effects, which may cause or contribute to additional disease.

371. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

372. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

373. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

374. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

375. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

376. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

378. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

381. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

382. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

383. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

384. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

385. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

386. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

387. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted,

as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

388. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes attempted suicide, multiple periods of suicidal ideation, depression, difficulty sleeping, among other harmful effects, which may cause or contribute to additional disease.

389. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

390. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

391. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

392. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

393. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

394. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

395. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

396. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

397. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

398. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

399. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

400. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

401. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

402. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

403. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes attempted suicide, multiple periods of suicidal ideation, depression, difficulty sleeping, among other harmful effects, which may cause or contribute to additional disease.

404. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWENTIETH CAUSE OF ACTION MEDICAL MONITORING**

405. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

406. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's resident state.

407. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available,

and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

408. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

409. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

410. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

411. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

412. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of

exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

413. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

414. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

415. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

416. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

417. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

419. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

420. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

421. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

422. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully

until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

423. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

424. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

425. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

426. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

427. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

428. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

### **IX. PRAYER FOR RELIEF**

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

DATED: June 6, 2022

Respectfully Submitted,

public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand “Meta” contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks’ overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is knowledge solely within Defendants’ possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world’s largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world’s most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta’s data segments. Only a fraction of these data segments

come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the [www.Facebook.com](https://www.facebook.com) ("Facebook") and [www.Instagram.com](https://www.instagram.com) ("Instagram") websites and respective interrelated apps (collectively "Meta 2"), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta's creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta's growth-at-any-cost approach, to wit, a generation of children physiologically

entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world's social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America's youth use Instagram.

7. A user's "feed" on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be exposed to content selected by the platforms to maximize the length of time and amount of content viewed by the user. Facebook and Instagram include many other harm causing features, as discussed below.

11. Plaintiff brings claims of strict liability based upon Defendants' defective design of their social media products that renders such products not reasonably safe for ordinary consumers in general and minors in particular. It is technologically feasible to design social media products that substantially decrease the incidence and magnitude of harm to ordinary consumers and minors arising from their foreseeable use of Defendants' products with a negligible increase in production cost.

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

13. Plaintiff also brings claims for common law negligence arising from Defendants' unreasonably dangerous social media products and their failure to warn of such dangers. Defendants knew or, in the exercise of ordinary care, should have

known that their social media products were harmful to a significant percentage of their minor users and failed to re-design their products to ameliorate these harms or warn minor users and their parents of dangers arising out of the foreseeable use of their products. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate safeguards from the harmful effects they knew were occurring.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users, especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## II. JURISDICTION AND VENUE

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Georgia and purposely avail themselves of the benefits of transacting business with Georgia residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Georgia and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Georgia relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Georgia.

18. Defendants advertise extensively in Georgia, through contractual relationships with third-party “partners” who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone

manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their products to users under the age of 13, by encouraging and allowing its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Georgia for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Georgia-related activities over the last several years arising from their defective and inherently dangerous social media products by Georgia residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Northern District of Georgia.

### III. PARTIES

**Plaintiff**

21. Plaintiff Megan Waddell is an individual residing in Dahlonge, Georgia, and the mother and custodial parent of her eleven-year-old son C.W. Plaintiff brings this suit on behalf of herself and on behalf of C.W., pursuant to FED. R. CIV. P. 17.

### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed “Meta Quest”). Meta’s subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms,

Inc. Facebook 2 is likely a managing entity for Meta's other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. ("Facebook 3") was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC ("Facebook 4") was incorporated in Delaware as "Oculus VR, LLC" on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4's principal place of business is in Menlo Park, California, and it develops Meta's virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed "Meta Quest"), among other technologies related to Meta's various platforms.

28. Instagram, LLC ("Instagram") was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2012, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company's principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### **IV. GENERAL FACTUAL ALLEGATIONS**

##### **A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.**

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated

with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become “popular.” Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle

with the inexorable desire to be accepted and admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predisposes teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today’s adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta’s platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

countered by dejection: minor users' brains adapt by reducing or "downregulating" the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and
- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the

platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager’s proclivity to engage in protracted upward social comparison while on social media is compounded by Meta’s deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta’s key features that make the platforms highly addictive include the use of intermittent variable rewards (“IVR”) and its Facial Recognition System (“FRS”).

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out

notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms' addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person's attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta's IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram's notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users' dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2)

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

Meta's use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today's youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children's Online Privacy Protection Act, or "COPPA," regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can

collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta’s algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user’s smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet’s infancy, Meta’s algorithms are not based exclusively on user requests or even user inputs. Meta’s algorithms combine the user’s profile (e.g., the information

posted by the user on the platform) and the user's dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user's interests and preferences, make predictions about what else might appeal to the user, and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta's key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta's unabashed willingness to target children, in the face of its conscious, long-standing, plainly deficient age-verification protocols demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook's Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or “MSI,” which emphasizes users’ connections’ interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an “amplification algorithm” to execute engagement-based ranking, which considers a post’s likes, shares, and comments, as well as a respective user’s past interactions with similar content, and exhibits the post in the user’s newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

---

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and polarizing

content because it'll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have

---

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of “suicide and self-injury” worse. Seventeen percent of teen-girl Instagram users say the platform makes “[e]ating issues” worse. Instagram users are twice as likely to develop an eating disorder as those who don’t use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms’ adverse impact to teenage users’ well-being, the absence of impulse control often renders teens powerless to oppose the platforms’ allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today’s parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook’s most susceptible patronage, to

wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage users and its obligation to create a suitable environment accessible only by its age-appropriate users, all in the interest of reaping obscene profit.

**C. Plaintiff Expressly Disclaims Any and All Claims Seeking to Hold Defendants Liable as the Publisher or Speaker of Any Content Provided, Posted, or Created by Third Parties.**

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

59. Plaintiff alleges that Defendants failed to warn minor users and their parents of known dangers arising from anticipated use of their social media platforms. None of Plaintiff's claims rely on treating Defendants as the publisher or speaker of any third-party's words. Plaintiff's claims seek to hold Defendants accountable for their own allegedly wrongful acts and omissions, not for the speech of others or for any attempts by Defendants to restrict access to objectionable content.

60. Plaintiff is not alleging that Defendant is liable for what third-parties have said, but for what Defendants did or did not do.

61. None of Plaintiff's claims for relief set forth herein require treating Defendants as a speaker or publisher of content posted by third parties. Rather, Plaintiff seeks to hold Defendants liable for their own speech and their own silence in failing to warn of foreseeable dangers arising from the anticipated use of their

products. Defendants could manifestly fulfill their legal duty to design reasonably safe products and furnish adequate warnings of foreseeable dangers arising out of their products, without altering, deleting, or modifying the content of a single third-party post or communication.

## **V. PLAINTIFF-SPECIFIC ALLEGATIONS**

62. Plaintiff C.W. is an eleven-year-old boy who is a heavy user of the Meta platform(s).

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). C.W.'s interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to C.W. 24 hours a day, C.W. began getting less and less sleep.

65. As a proximate result of his addiction to the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to C.W., a minor user of the Meta platform(s), C.W. subsequently developed injuries including, but not limited to, thoughts of self-harm, depression, headaches, fatigue, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platform(s), including through the use of disappearing or time-sensitive messaging features, to frustrate parents like Megan Waddell from exercising their rights and duties as parents to monitor and limit their children's use of the Meta platform(s).

67. Defendants have designed the Meta platforms(s) to allow minors to use, become addicted to, and abuse their products without the consent of the users' parents, like Megan Waddell.

68. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

69. Neither Megan Waddell nor C.W. were aware of the clinically addictive and mentally harmful effects of Meta platform(s) when C.W. began to use the products.

70. Defendants not only failed to warn C.W. and Megan Waddell of the dangers of addiction, sleep deprivation, and problematic use of the Meta platform(s), but misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

71. As a result of C.W.'s extensive and problematic use of the Meta platform(s), he has developed numerous mental health conditions that he still struggles with until this day.

## VI. CAUSES OF ACTION

**FIRST CAUSE OF ACTION**  
**STRICT LIABILITY - DESIGN DEFECT**

72. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

73. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

74. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

75. Facebook and Instagram were designed and intended to be used as social media platforms.

76. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of

reasons enumerated in the complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

77. DEFENDANTS defectively designed the platforms to specifically appeal to and addict minors and young adults, who were particularly unable to appreciate the risks posed by the platforms, and particularly susceptible to harms from those products.

78. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

79. DEFENDANTS defectively designed platforms (Facebook and Instagram) that are inherently dangerous because they included features making the product addictive and likely to cause the mental and physical health harms listed above. These features include, but are not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of

“likes”, comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

80. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

81. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

82. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

83. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without

the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

84. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

85. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

86. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;

- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;

- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

87. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

88. It is reasonable for parents to expect that social media products that actively promote their platforms to minors will undertake reasonable efforts to notify

parents when their child's use becomes excessive, occurs during sleep time, or exposes the child to harmful content. Defendants could feasibly design the products to identify minor users who are using the product excessively, using it during sleeping hours, or being exposed to harmful content, and notify their parents, at negligible cost.

89. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

90. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

91. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease

consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

92. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

93. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

94. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

95. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

96. Plaintiff's injuries—physical, emotional and economic—were reasonably foreseeable to DEFENDANTS at the time of the products' design, marketing, and operation.

97. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS' sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products' condition.

98. Plaintiff was injured as a direct and proximate result of the platform's defective design as described herein. The defective design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

99. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the social media induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

## **SECOND CAUSE OF ACTION**

### **STRICT LIABILITY - FAILURE TO WARN**

100. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

101. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

102. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

103. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

104. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

105. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

106. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,

- ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters)
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are

currently publicly unknown and hidden from users and governments.

107. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

108. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

109. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

110. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

111. DEFENDANTS are strictly liable for creating, operating, and unleashing on users defective platforms that contained inadequate warnings.

112. Plaintiff could not have averted injury through the exercise of reasonable care for reasons including DEFENDANTS' concealment of the true risks posed by Facebook and Instagram.

113. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

114. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of sign-up, and at various intervals of the user interface.

115. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because he would not have used or signed up on Facebook and Instagram had he received adequate warnings and instructions that he could be harmed by platform design that hijacks a user's neural

reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including thoughts of self-harm, depression, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

116. Instead of providing warnings at sign-up or during use, Meta provides no warning at all. Rather, the most accessible and full information regarding the mental and physical health risks of Meta’s platforms comes from third parties. Meta has a “Youth Portal” website that does not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends,

<sup>10</sup> <https://www.facebook.com/safety/youth>

and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

117. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

118. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and

---

<sup>11</sup> Id.

toys to unhealthy foods and snacks high in fat, sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

119. Finally, the guide mentions the body image harms social media inflicts, but it sole blames influencers as the cause rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals, and help them understand that these images are often digitally altered or filtered so that people look

more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

120. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

121. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

122. The platforms' lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

123. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

127. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

129. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

131. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;

- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

132. Plaintiff was injured as a direct and proximate result of the developmental, inspection, coding, programming, testing, monitoring, and operational defects of Facebook and Instagram as described herein.

133. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

134. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTH CAUSE OF ACTION  
PRODUCTS LIABILITY - NEGLIGENT DESIGN**

135. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

136. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

137. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

138. Facebook and Instagram were designed and intended to be used as social media platforms.

139. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly so with minors and young adults.

140. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the

potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

141. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

142. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram because the products were addictive; had mental, cognitive, and physical health impacts; and had a likelihood of causing social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

143. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other

features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

144. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

145. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

146. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease

consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

147. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

148. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

149. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal

ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

150. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;

- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;

- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

154. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost-effective, reasonably feasible alternative designs utilizing technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth-protecting features.

155. A reasonable company under the same or similar circumstances would have designed a safer product.

156. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes thoughts of self-harm, depression, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

157. The design of Facebook and Instagram was a proximate cause of Plaintiff's harms.

158. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY - NEGLIGENT FAILURE TO WARN**

159. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

160. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including

the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

161. At all relevant times, the DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

162. The DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

164. The DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks, including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among

other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

165. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

166. The DEFENDANTS breached their duty of care by failing to use reasonable care in providing adequate warnings in the platforms' sign-up warnings, and through marketing, promoting and advertising of the platforms including that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;

- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
167. Facebook and Instagram are also defective for failing to warn users that:
  - a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;

- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

168. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

169. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

170. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and

increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

171. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

172. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

173. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

174. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because he would not have used Facebook and Instagram had he received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack

179. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

180. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner.

182. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

183. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices (“GMPs”);

- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;
- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

184. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

185. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

186. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

187. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION  
NEGLIGENCE AND/OR GROSS NEGLIGENCE**

188. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

189. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

190. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

191. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

192. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

193. DEFENDANTS knew, or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

194. DEFENDANTS knew, or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

197. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

198. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

199. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user’s feed based on engagement or “meaningful social interactions” rather than chronology); (2) intermittent variable rewards (a system of “likes”, comments, strategically-timed

notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

200. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

201. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

202. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

203. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

204. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune

itself to each individual user to become as addictive and difficult to stop engaging with as possible.

205. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

207. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;

- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;
- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;

- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;
- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

208. DEFENDANTS' acts and omissions constitute gross negligence, because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

209. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

210. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

211. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

212. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes thoughts of self-harm, depression, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

213. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

214. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced

injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

## **EIGHTH CAUSE OF ACTION NEGLIGENT MISREPRESENTATION**

215. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

216. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

217. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

218. DEFENDANTS were negligent, reckless and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and

Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

219. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

220. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and

- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

221. Meta also omitted to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;

- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

222. These representations were false and omissions were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

223. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

224. Through DEFENDANTS' incredible power as the premier social media company (and/or association with that company), they have silenced and suppressed

information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

225. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

226. DEFENDANTS intended for Plaintiff to rely on these representations.

227. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

228. DEFENDANTS have yet to disclose or correct these misrepresentations about Facebook and Instagram.

229. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

230. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

231. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes thoughts of self-harm, depression, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

232. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

## NINTH CAUSE OF ACTION FRAUD

233. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

234. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including

the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

235. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

236. DEFENDANTS' marketing, promotions and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

237. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

238. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta's marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

239. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users' wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;
- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and

f. Other misrepresentations described herein.

240. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- g. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- h. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- i. Facebook makes body-image issues worse for one-third of girls;
- j. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- k. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- l. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

241. Meta also omitted/failed to inform users that, as it knew or should have known:

- m. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,

- vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
- vii. present a false reality (regarding one’s comparative status to their peers, and/or the general state of world or political affairs);
- n. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers’ appearances and success, especially among teenage female users;
- o. The platforms cause the mental and physical health harms as listed above;
- p. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- q. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

242. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD,

difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

243. The above representations were communicated to Plaintiff.

244. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

245. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

246. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of

substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

247. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

248. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

249. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

250. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TENTH CAUSE OF ACTION**  
**FRAUDULENT CONCEALMENT**

251. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

252. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

253. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

254. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

255. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

256. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features.

DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

257. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

258. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

259. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

260. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

261. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

262. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

263. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;

- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

264. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

265. Plaintiff did not know of the facts that DEFENDANTS concealed.

266. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

267. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

268. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

269. Plaintiff relied to his detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from him regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, he would not have signed up for or used Facebook and Instagram.

270. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: thoughts of self-harm, depression, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

271. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

272. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

273. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

274. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of Plaintiff's respective State.

275. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

276. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

277. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating

Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

278. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

279. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

280. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;
- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;
- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

281. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

282. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

283. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWELFTH CAUSE OF ACTION  
UNJUST ENRICHMENT**

284. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

285. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

286. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

287. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

288. DEFENDANTS also concealed from Plaintiff that:

- g. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and

- vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- h. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- i. The platforms cause the mental and physical health harms as listed above;
- j. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- k. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- l. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

289. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

290. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto

DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

291. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

292. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

293. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

294. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position he occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted using the internet, and other notice they have received because of lawsuits filed against them,

DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

295. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

296. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

297. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective States.

298. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and

therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

299. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

300. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

302. Had DEFENDANTS not engaged in the deceptive conduct described herein, Plaintiff would not have registered for or used FACEBOOK AND INSTAGRAM resulting in the injuries as alleged herein.

303. Fraudulent, unfair, and/or deceptive practices that violate consumer protection laws include, but are not limited to, the following:

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;

- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

304. Plaintiff was injured by DEFENDANTS' unlawful conduct, which was furthered through a pervasive pattern of false and misleading statements and omissions by targeting minors and portraying Facebook and Instagram as harmless and beneficial, while misrepresenting or omitting concerns about their mental and physical health impact, addictiveness, and safety.

305. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- a. GA. CODE ANN. § 10-1-370 *et seq.* (Uniform Deceptive Trade Practices Act); and
- b. GA. CODE ANN. § 10-1-390 *et seq.* (Fair Business Practices Act of 1975).

306. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

307. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

308. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

309. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

310. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

311. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

312. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

313. DEFENDANTS violated state law for breach of express warranties and Plaintiff herein will bring a cause of action for breach of express warranty under applicable State common law.

314. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the

platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

315. Upon information and belief, DEFENDANTS expressly warranted to consumers, like Plaintiff, through written or electronic statements, descriptions, and affirmations of fact on its websites, advertising, and marketing materials that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

316. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

317. As described herein, the platforms actually use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

318. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

319. When DEFENDANTS made these express warranties, they knew the intended purposes of Facebook and Instagram and warranted the product to be, in all respects, safe and proper for such purposes.

320. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram platforms made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the ordinary purposes for which they were intended.

321. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

322. DEFENDANTS' breach of these express warranties were a substantial factor in causing Plaintiff's harms.

323. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

324. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FIFTEENTH CAUSE OF ACTION  
BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

325. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

326. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

327. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

328. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

329. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

330. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

331. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users’ mental health.

332. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

333. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in

merchantable condition when made available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

334. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

335. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

336. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

337. Plaintiff would not have used Facebook and Instagram, or would not have registered or used on the same terms, had he known the facts these Defendants failed to disclose.

338. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

339. Plaintiff was injured as a direct and proximate result of DEFENDANTS' breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS' failure to deliver merchantable products in the form of addiction and other negative health consequences.

340. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

341. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

342. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

343. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated,

made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

344. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

345. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

347. DEFENDANTS knew at that time of account registration, and/or had reason to know, that Plaintiff was relying on DEFENDANTS' skill or judgment to select or furnish suitable social media platforms.

348. DEFENDANTS did not effectively exclude or modify this implied warranty at any point during users' registration and interface with the platforms.

349. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

350. DEFENDANTS knew the Plaintiff's intended purposes for Facebook and Instagram and impliedly warranted the product to be, in all respects, safe and proper for such purposes.

351. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

352. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

353. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

354. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

355. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION  
INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

356. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

357. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

358. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

359. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

360. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the

potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

363. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

364. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

365. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

366. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

367. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

368. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

369. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

370. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook

and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

371. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes thoughts of self-harm, depression, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

372. DEFENDANTS' conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

373. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

374. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

376. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

377. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

378. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

379. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

380. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

381. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and

medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

382. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

383. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

384. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

385. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

386. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

387. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

388. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

389. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes thoughts of self-harm, depression, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

390. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

391. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

392. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's respective State.

393. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

394. DEFENDANTS knew, or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

395. DEFENDANTS knew, or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

396. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process,

assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

398. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

399. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

400. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

401. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

402. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

403. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

404. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes thoughts of self-harm, depression, headaches, fatigue, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

405. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**TWENTIETH CAUSE OF ACTION**  
**MEDICAL MONITORING**

406. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

407. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of Plaintiff's resident state.

408. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

409. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

410. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;

- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
  - f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
411. Facebook and Instagram cause harm by the following product effects:
- a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;

- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

412. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

413. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

414. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

415. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

416. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, "liking," and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked

to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

417. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

418. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

419. As a direct and proximate result of DEFENDANTS' conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

420. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

421. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

422. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

423. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical

research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

424. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

426. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused his injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused his injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

428. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused his injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts.

429. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that he had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

### **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

## IX. PRAYER FOR RELIEF

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen,

a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users, especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## **II. JURISDICTION AND VENUE**

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Illinois and purposely avail themselves of the benefits of transacting business with Illinois residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Illinois and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Illinois relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Illinois.

18. Defendants advertise extensively in Illinois, through contractual relationships with third-party "partners" who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from

providing their products to users under the age of 13, by encouraging and allowing its product to be installed indiscriminately on mobile devices, it actively promotes and provides access to its product to the underage users in Illinois for whom those devices are intended.

19. Defendants have earned millions of dollars in annual revenue from their Illinois-related activities over the last several years arising from the use of their defective and inherently dangerous social media products by Illinois residents, including Plaintiff.

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Northern District of Illinois.

### III. PARTIES

#### **Plaintiff**

21. Plaintiff Kim Isaacs is an individual domiciled in Oswego, Illinois, and the custodial parent of her seventeen-year-old daughter A.I. Oswego, Illinois, is Plaintiffs' true, fixed, and permanent home and principal establishment, to which Plaintiffs' have the intention of returning whenever they are absent therefrom. Plaintiffs intend to remain in Oswego, Illinois, indefinitely. Plaintiff brings this suit on behalf of herself and on behalf of A.I., pursuant to FED. R. CIV. P. 17.

#### **Defendant Meta Platforms, Inc.**

22. Meta is a Delaware corporation and multinational technology conglomerate, having its principal place of business in Menlo Park, California.

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed "Meta Quest"). Meta's subsidiaries include, but may not be limited to: Facebook Holdings, LLC

(Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### **Subsidiary Defendants**

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of this LLC Defendant.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California. Defendant Meta is the sole member of this LLC Defendant.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms. Defendant Meta is the sole member of this LLC Defendant.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing. Defendant Meta is the sole member of this LLC Defendant.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011, and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes

change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature, considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants’ social media products exploit minor users’ diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users’ incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users’ frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them

to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become “popular.” Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predisposes teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today’s adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta’s platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users’ brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In

---

<sup>1</sup> Monica Anderson and JingJing Jiang, *Teens, Social Media and Technology* (February 3, 2022, last visited at 11:20 AM CST) <https://www.pewresearch.org/internet/2018/05/31/teens-social-media-technology-2018/>.

normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users attempt to stop using Defendants' social media products, they experience the universal symptoms of withdrawal from any addictive substance including anxiety, irritability, insomnia, and craving.

37. Addictive use of social media by minors is psychologically and neurologically analogous to addiction to internet gaming disorder. Gaming addiction is a recognized in the American Psychiatric Association's 2013 Diagnostic and Statistical Manual of Mental Disorders (DSM-5) (used by mental health professionals to diagnose mental disorders) and is a recognized mental health disorder by the World Health Organization and International Classification of Diseases. The diagnostic symptoms of social media addiction among minors are the same as the symptoms of addictive gaming promulgated in DSM 5 and include:

- a. Preoccupation with social media and withdrawal symptoms (sadness, anxiety, irritability) when device is taken away or use is not possible (sadness, anxiety, irritability).
- b. Tolerance, the need to spend more time using social media to satisfy the urge.
- c. Inability to reduce social media usages, unsuccessful attempts to quit gaming.
- d. Giving up other activities, loss of interest in previously enjoyed activities due to social media usage.
- e. Continuing to use social media despite problems.
- f. Deceiving family members or others about the amount of time spent on social media.
- g. The use of social media to relieve negative moods, such as guilt or hopelessness; and

- h. Jeopardizing school or work performance or relationships due to social media usage.

38. Defendants' advertising profits are directly tied to the amount of time that its users spend online. Thus, Defendants enhance advertising revenue by maximizing users' time online through a product design that addicts them to the platform, in part by directing them to content that is progressively more stimulating. However, reasonable minor users and their parents do not expect that online social media platforms are psychologically and neurologically addictive.

39. Defendants' products could feasibly report the frequency and duration of their minor users' screen time to their parents at negligible cost. This would enable parents to track the frequency, time, and duration of their minor child's social media, identify and address problems arising from such use, and better exercise their rights and responsibilities as parents.

40. Social comparisons on social media are frequent and are especially likely to be upward, as social media provides a continuous stream of information about other people's accomplishments.<sup>2</sup> Past research suggests that social comparisons occur automatically; when individuals encounter information about another person, their own self-perceptions will be affected. The sheer number of posts in a News Feed, each offering a thumbnail sketch of each person's carefully curated and predominantly ostentatious content, yields numerous opportunities for social comparison. Although people do not typically post false information about themselves online, they do engage in selective self-presentation and are more likely to post eye-catching content. As a result, individuals browsing their News Feeds are more likely to see posts about friends' exciting social activities rather than dull days at the office, affording numerous opportunities for comparisons to seemingly better-off others. Individuals with vacillating levels of self-esteem and certitude, characteristics notoriously endemic to the teenage cohort, are

---

<sup>2</sup> Jin Kyun Lee, *The Effects of Social Comparison Orientation on Psychological Well-Being in Social Networking Sites: Serial Mediation of Perceived Social Support and Self-Esteem* (2020), <https://link.springer.com/content/pdf/10.1007/s12144-020-01114-3.pdf>

particularly oriented to making frequent and extreme upward social comparisons on social media, which in turn threatens their mental health. Social-media-induced social comparison often results in a discrepancy between the ideal self and the real self, thus evoking a sense of depression, deprivation, and distress, resulting in an overall aggravation of one's mental state.<sup>3</sup> Since the early 2000s, studies have shown that frequent upward social comparison results in lower self-esteem and reduced overall mental health.<sup>4</sup> It has also long been known that individuals who are more likely to engage in self-comparison are likewise more likely to have negative outcomes when using social media. To cope with wavering self-esteem, digitally native adolescents often become envious of others and resort to cyberbullying to deconstruct the point of comparison's perceived superiority and preserve an increasingly delicate ego. These natural dynamics in youth are exacerbated to psychologically injurious levels by Meta's platforms' progressively toxic environment worsened by its 2018 shift to engagement-based ranking, which is discussed in further detail below.

41. The dangers associated with teenager's proclivity to engage in protracted upward social comparison while on social media is compounded by Meta's deft and discreet construction of an atmosphere capable of exploiting the impulse control issues of even the most mature adults, thereby unleashing upon the public a product that is predictably highly addictive. Some of Meta's key features that make the platforms highly addictive include the use of intermittent variable rewards ("IVR") and its Facial Recognition System ("FRS").

---

<sup>3</sup> This schism between the ideal self and the real self, and the attendant dissatisfaction with reality, is further exacerbated by Meta's use of physical-augmentation technology, which allows users to utilize photo and video filters to make remove blemishes, make the face appear thinner, and lighten the skin-tone, all to make themselves appear more "attractive."

<sup>4</sup> Claire Midgley, *When Every Day is a High School Reunion: Social Media Comparisons and Self-Esteem* (2020), [https://www.researchgate.net/publication/342490065\\_When\\_Every\\_Day\\_is\\_a\\_High\\_School\\_Reunion\\_Social\\_Media\\_Comparisons\\_and\\_Self-Esteem](https://www.researchgate.net/publication/342490065_When_Every_Day_is_a_High_School_Reunion_Social_Media_Comparisons_and_Self-Esteem)

42. IVR is a method used to addict a user to an activity by spacing out dopamine triggering stimuli with dopamine gaps—a method that allows for anticipation and craving to develop and strengthens the addiction with each payout. The easiest way to understand this term is by imagining a slot machine. You pull the lever (intermittent action) with the hope of winning a prize (variable reward). In the same way, you refresh Meta’s feeds, endure the brief delay, and then learn if anyone has tagged you in a photo, mentioned you in a post, sent you a message, or liked, commented on, or shared either of your posts. As explained below, Meta spaces out notifications of likes and comments into multiple bursts (dopamine gaps), rather than notifying users in real time, to maximize the platforms’ addictiveness.

43. Engineered to meet the evolving demands of the “attention economy,”<sup>5</sup> a term used to describe the supply and demand of a person’s attention, which is a highly valuable commodity for internet websites, in February 2009, Meta introduced perhaps its most conspicuous form of IVR: its “Like” button; Instagram launched that same year and came ready-made with a like function shaped as a heart. Additional features of Meta’s IVR include its delay-burst notification system, comments, posts, shares, and other dopamine-triggering content. Instagram’s notification algorithm delays notifications to deliver them in spaced-out, larger bursts. Facebook likely uses a similar feature. These designs take advantage of users’ dopamine-driven desire for social validation and optimizes the balance of negative and positive feedback signals to addict users.

44. Other psychological manipulations used to intertwine social media users include, but are not limited to: (1) the FRS system, which has already collected for distribution to various third-parties a billion individual facial recognition templates and is otherwise used by Meta to identify and tag people in photos; (2) Meta’s use of wavy dots to reflect that someone is currently writing you a message, which is designed to keep you on the platform until you receive the message

---

<sup>5</sup> The business model is simple: The more attention a platform can pull from its users, the more effective its advertising space becomes, allowing it to charge advertisers more.

or shorten the time for you to return and check for a message; and (3) the concept of social reciprocity, a variance of quid pro quo, pursuant to which Meta alerts you when someone has read your message, which encourages the receivers to respond—because the sender knows the message has been read—and simultaneously prompts the sender to return to check for the seemingly inevitable response. In sum, this perilous amalgamation of intense psychological vulnerability and targeted exploitation foreseeably results in an increased risk of a variety of harms for today’s youth, including, but not limited to, social media addiction, withdrawal—from friends, family, and social and academic advancement—lack of focus, anxiety, body dysmorphia, eating disorders, death resulting from eating disorders, depression, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, self-harm, and suicide among other harms.

**B. Meta Knowingly Exploits Teenage Vulnerabilities for Unjust Gain.**

45. Enacted in 1998 and finalized by a U.S. Federal Trade Commission rulemaking in 2000, the Children’s Online Privacy Protection Act, or “COPPA,” regulates the conditions under which commercial web sites that either target children under age 13 or have actual knowledge of children under age 13 using their site can collect and use information about them. As a result of COPPA, website operators must obtain “verifiable parental consent” from parents prior to the collection and use of information about children under age 13. Meta has chosen to avoid these obligations by purporting to ban all those younger than 13 through its terms of service.

46. Meta states that children under the age of thirteen are prohibited from having Meta accounts, but Meta knowingly lacks effective age-verification protocols. Since at least 2011, Meta has known that its age-verification protocols are largely inadequate, then estimating that it removes 20,000 children under age 13 from Facebook every day. The problem has not been remediated, as Meta removed at least six hundred thousand underage users in 2021. Zuckerberg himself has stated that, notwithstanding the spirit of COPPA, younger children should be allowed to get on Facebook.

47. Defendants do not charge their users to use their platforms, but instead receive money from advertisers who pay a premium to target advertisements to specific categories of people as studied and sorted by Meta's algorithms. Thus, Defendants generate revenue based upon the total time spent on the application, which directly correlates with the number of advertisements that can be shown to each user.

48. Meta, as originally conceived, ostensibly functioned like an enormous virtual bulletin board, where content was published by authors. But Meta has evolved over time with the addition of numerous features and products designed by Meta to engage users. The earliest of these—the search function and the “like” button—were primarily user-controlled features. In more recent years, however, Meta has taken a more active role in shaping the user-experience on the platform with more complex features and products. The most visible of these are curated recommendations, which are pushed to each user in a steady stream as the user navigates the website, and in notifications sent to the user's smartphone and email addresses when the user is disengaged with the platform. These proprietary Meta products include News Feed (a newsfeed of stories and posts published on the platform, some of which are posted by your connections, and others that are suggested for you by Meta), People You May Know (introductions to persons with common connections or background), Suggested for You, Groups You Should Join, and Discover (recommendations for Meta groups to join). These curated and bundled recommendations are developed through sophisticated algorithms. As distinguished from the earliest search functions that were used to navigate websites during the Internet's infancy, Meta's algorithms are not based exclusively on user requests or even user inputs. Meta's algorithms combine the user's profile (e.g., the information posted by the user on the platform) and the user's dossier (the data collected and synthesized by Meta to which Meta assigns categorical designations), make assumptions about that user's interests and preferences, make predictions about what else might appeal to the user,

and then make very specific recommendations of posts and pages to view and groups to visit and join based on rankings that will optimize Meta's key performance indicators.

49. Equipped with ample information about the risks of social media, the ineffectiveness of its age-verification protocols, and the mental processes of teens, Meta has expended significant effort to attract preteens to its products, including substantial investments in designing products that would appeal to children ages 10-to-12. Meta views pre-teens as a valuable, unharnessed commodity, so valuable that it has contemplated whether there is a way to engage children during play dates.<sup>6</sup> Meta's unabashed willingness to target children—in the face of its conscious, long-standing, plainly deficient age-verification protocols—demonstrates the depths to which Meta is willing to reach to maintain and increase its profit margin.

50. Faced with the potential for reduction in value due to its declining number of users, in or around early 2018, Meta (and likely Meta 2) revamped its interface to transition away from chronological ranking, which organized the interface according to when content was posted or sent, to prioritize Meaningful Social Interactions, or "MSI," which emphasizes users' connections' interactions, e.g., likes and comments, and gives greater significance to the interactions of connections that appeared to be the closest to users. To effectuate this objective, Facebook developed and employed an "amplification algorithm" to execute engagement-based ranking, which considers a post's likes, shares, and comments, as well as a respective user's past interactions with similar content, and exhibits the post in the user's newsfeed if it otherwise meets certain benchmarks. The algorithm covertly operates on the proposition that intense reactions invariably compel attention. As it measures reactions and contemporaneously immerses users in

---

<sup>6</sup> Georgia Wells and Jeff Horwitz, *Facebook's Effort to Attract Preteens Goes Beyond Instagram Kids, Documents Show* (2021), <https://www.wsj.com/articles/facebook-instagram-kids-tweens-attract-11632849667>

the most reactive content, and negative content routinely elicits passionate reactions, the algorithm effectively works to steer users toward the most negative content.

51. Meta CEO Zuckerberg publicly recognized this in a 2018 post, in which he demonstrated the correlation between engagement and sensational content that is so extreme that it impinges upon Meta’s own ethical limits, with the following chart:<sup>7</sup>

52. The algorithm controls what appears in each user’s News Feed and promotes content that is objectionable and harmful to many users. In one internal report, Meta concluded that “[o]ur approach has had unhealthy side effects on important slices of public content, such as politics and news,” with one data scientist noting that “[t]his is an increasing liability.” In other internal memos, Meta concluded that because of the new algorithm, “[m]isinformation, toxicity, and violent content are inordinately prevalent.” Other documents show that Meta employees also discussed Meta’s motive for changing its algorithm—namely, that users began to interact less with the platform, which became a worrisome trend for Meta’s bottom line. Meta found that the inflammatory content that the new algorithm was feeding to users fueled their return to the platform and led to more engagement, which, in turn, helped Meta sell more of the digital ads that generate most of its revenue. All told, Meta’s algorithm optimizes for angry, divisive, and

<sup>7</sup> Mark Zuckerberg, *A Blueprint for Content Governance and Enforcement*, FACEBOOK, <https://www.facebook.com/notes/751449002072082/> (last visited January 8, 2022).

polarizing content because it'll increase its number of users and the time users stay on the platform per viewing session, which thereby increases its appeal to advertisers, thereby increasing its overall value and profitability.

53. Upon information in belief, at least as far back as 2019, Meta initiated, *inter alia*, a Proactive Incident Response experiment, which began researching the effect of Meta on the mental health of today's youth.<sup>8</sup> Meta's own in-depth analyses show significant mental-health issues stemming from the use of Instagram among teenage girls, many of whom linked suicidal thoughts and eating disorders to their experiences on the app.<sup>9</sup> Meta's researchers have repeatedly found that Instagram is harmful for a sizable percentage of teens that use the platform. In an internal presentation from 2019, Meta researchers concluded that "[w]e make body issues worse for one in three teen girls," and "[t]eens blame Instagram for increases in the rate of anxiety and depression." Similarly, in a March 2020 presentation posted to Meta's internal message board, researchers found that "[t]hirty-two percent of teen girls said that when they feel bad about their bodies, Instagram made them feel worse." Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of "suicide and self-injury" worse. Seventeen percent of teen-girl Instagram users say the platform makes "[e]ating issues" worse. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

54. Meta is aware that teens often lack the ability to self-regulate. Meta is further aware that, despite the platforms' adverse impact to teenage users' well-being, the absence of impulse

---

<sup>8</sup> See *Protecting Kids Online: Testimony from a Facebook Whistleblower*, United States Senate Committee on Commerce, Science, & Transportation, Sub-Committee on Consumer Protection, Product Safety, and Data Security, <https://www.c-span.org/video/?515042-1/whistleblower-frances-haugen-calls-congress-regulate-facebook>

<sup>9</sup> See Wall Street Journal Staff, *The Facebook Files* (2021), <https://www.wsj.com/articles/the-facebook-files-11631713039?mod=bigtop-breadcrumb>

control often renders teens powerless to oppose the platforms' allure. Meta is conscious of the fact that the platform dramatically exacerbates bullying and other difficulties prevalent within the high school experience, as the reach of the same now affects users within the ideally otherwise safe confines of the home. The advent of social media largely occurred after today's parents became adults, the consequence being a large swath of parents that lack the context needed to appreciate the contemporary perils of Meta and Instagram, who are likewise ill-equipped to offer advice sufficient to effectively mitigate against it.

55. The shift from chronological ranking to the algorithm modified the social networking environment in such a way that it created a new iteration of the Meta experience, one that is profoundly more negative, one that exploits some of the known psychological vulnerabilities of Facebook's most susceptible patronage, to wit, juveniles, resulting in a markedly enlarged threat to the cohort's mental health and the related frequency of suicidal ideation.

56. Excessive screen time is harmful to adolescents' mental health, sleep patterns, emotional well-being. Defendants' products lack any warnings that foreseeable product use can disrupt healthy sleep patterns, or specific warnings to parents when their child's product usage exceeds healthy levels or occurs during sleep hours, rendering the platforms unreasonably dangerous. Reasonable and responsible parents are not able to accurately monitor their child's screen time because most adolescents own or can obtain access to mobile devices and engage in social media use outside their parents' presence.

57. Meta professes to have implemented protective measures to counteract the well-established dangers of its sites' customized, doggedly harmful content; however, its protocols apply only to content conveyed in English and removes only three-to-five percent of harmful content. Meta knows its quality-control and age-verification protocols are woefully ineffective, but Meta is either unwilling or incapable of properly managing its platforms. This is consistent with its established pattern of recognizing, and subsequently ignoring, the needs of its underage

58. Plaintiff seeks to hold Defendants accountable for their own alleged acts and omissions. Plaintiff's claims arise from Defendants' status as the designer and marketer of dangerously defective social media products, not as the speaker or publisher of third-party content.

60. Plaintiff is not alleging that Defendant is liable for what third parties have said, but for what Defendants did or did not do.

## V. PLAINTIFF-SPECIFIC ALLEGATIONS

21

63. Shortly after registering to use the Meta platform(s), Plaintiff began engaging in addictive and problematic use of the platform(s). A.I.'s interest in any activity other than viewing and posting on the Meta platform(s) progressively declined.

64. Prompted by the addictive design of Defendants' product(s), and the constant notifications that Defendants' platform(s) pushed to A.I. 24 hours a day, A.I. developed a compulsion to engage with the Meta Platform(s) and began getting less and less sleep.

65. As a proximate result of her compulsion to interact with the Meta platform(s), and specifically due to recommendations and content Defendants selected and showed to A.I., a minor user of the Meta platform(s), A.I. subsequently developed injuries including, but not limited to, social media compulsion, an eating disorder(s), depression, severe anxiety, and a reduced inclination or ability to sleep.

66. Defendants have designed the Meta platform(s), including through the use of disappearing or time-sensitive messaging features, to frustrate parents like Kim Isaacs from exercising their rights and duties as parents to monitor and limit their children's use of the Meta platform(s).

67. Defendants have designed the Meta platforms(s) to allow minors to use, become addicted to, and abuse their products without the consent of the users' parents, like Kim Isaacs.

68. Defendants have specifically designed the Meta platform(s) to be attractive nuisances to underage users but failed to exercise the ordinary care owed to underage business invitees to prevent the rampant, foreseeable, and deleterious impact on minor users that access the Meta platform(s).

69. Neither Kim Isaacs nor A.I. were aware of the addictive and mentally harmful effects of the Meta platform(s) when A.I. began to use the products.

70. Defendants not only failed to warn A.I. and Kim Isaacs of the dangers of social media compulsion, sleep deprivation, and problematic use of the Meta platform(s), but

misrepresented the safety, utility, and non-addictive properties of their products. For example, the head of Instagram testified under oath at a December 8, 2021, Senate Committee hearing that Instagram does not addict its users.

71. As a result of A.I.'s extensive and problematic use of the Meta platform(s), she has developed numerous health conditions that she still struggles with until this day.

## VI. CAUSES OF ACTION

### **FIRST CAUSE OF ACTION STRICT LIABILITY - DESIGN DEFECT**

72. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

73. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

74. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

75. Facebook and Instagram were designed and intended to be used as social media platforms.

76. Facebook and Instagram as designed were unreasonably dangerous, posed a substantial likelihood of harm, and were therefore defective because of reasons enumerated in the Complaint, including, but not limited to, risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus,

78. DEFENDANTS effectively designed the platforms to be addictive and take advantage of the chemical reward system of users' brains (especially young users) to create addiction and additional mental and physical health harms.

80. DEFENDANTS defectively designed the platforms and DEFENDANTS failed to test as to the safety of features they developed and implemented for use in the platforms. Once DEFENDANTS did perform some product testing and had knowledge of ongoing harm to Plaintiff, they failed to adequately remedy the product defects or warn Plaintiff.

81. Facebook and Instagram do not perform as safely as a reasonable and ordinary consumer would reasonably assume and reasonably expect. Facebook and Instagram pose a risk of serious mental and physical health injuries as listed above.

82. The risks inherent in the design of Facebook and Instagram significantly outweigh any benefits of such design.

83. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, such as by designing products without the harm causing features listed above, that were less addictive, less likely to cause mental health harms, while still providing an optimal social media experience and facilitating social connection.

84. DEFENDANTS could have limited the duration of login sessions to prevent harmful, extended use of the platforms and could have designed the platforms to logout for a period of time if excessive use occurred. It is well established in research that to effectively stay connected socially, a person only needs a limited amount of use time. Instead, DEFENDANTS designed a product that uses behavioral engineering to maximize the number of use sessions and length of use per session, resulting in serious harm to Plaintiff.

85. DEFENDANTS could have used technology to enable user-level access restrictions so that use was tied to a user's age verification, restricting those underaged from using the platforms, or other youth protecting features.

86. DEFENDANTS could have utilized cost effective, reasonably feasible alternative designs to minimize these harms, including, but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. Session time limits;

- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);
- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Notification to parents regarding their child's extensive use, use during sleep hours, or exposure to harmful content on the platform,
- j. Self-limiting tools;
- k. Implementing labels on images and videos that have been edited through the platform;
- l. Age-based content filtering;
- m. General content filtering;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (*e.g.*, content that causes negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content, such as inappropriate or salacious content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- q. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- r. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic recommendation, presentation, and sorting;
- s. Chronological presentation of content rather than algorithmic; and
- t. Many other less harmful alternatives.

87. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing,

89. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

91. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's

algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

92. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

93. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

94. DEFENDANTS failed to design the product with adequate warnings about the likely harms of use.

95. Plaintiff used Facebook and Instagram as intended or in reasonably foreseeable ways. DEFENDANTS specifically intended for minors to use its products and were aware that minors were doing so.

96. Plaintiff’s injuries—physical, emotional, and economic—were reasonably foreseeable to DEFENDANTS at the time of the products’ design, marketing, and operation.

97. Facebook and Instagram were defective and unreasonably dangerous when they left DEFENDANTS’ sole possession/control and were offered to users. The defects continued to exist through use by consumers, including Plaintiff, who used the products without any substantial change in the products’ condition.

**SECOND CAUSE OF ACTION**  
**STRICT LIABILITY - FAILURE TO WARN**

101. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

103. Facebook and Instagram were and are in a defective condition that is unreasonably dangerous and unsafe to the consumer by failing to adequately warn users about the risk that the platforms pose of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein.

104. DEFENDANTS were aware that Facebook and Instagram posed, among other things, the above-stated risks considering scientific and medical knowledge that was generally accepted at the time of design, development, coding, dissemination, public release, and operation of platforms.

105. Facebook and Instagram are defective because, among other reasons described herein, DEFENDANTS failed to warn consumers, including Plaintiff, in the platform's, notices and through the marketing, promotion and advertising of the platforms that, according to DEFENDANTS own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who do not use social media.

106. Facebook and Instagram are also defective for failing to warn users that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm,

- vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users,
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

107. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

108. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively psychologically engineer new and ongoing users to increase addiction and exposure to the platforms, causing and increasing other mental and physical harms. The platforms encourage users to recruit more users across their personal contacts.

109. The failure of DEFENDANTS to adequately warn about their defective products and choice to instead misleadingly advertise through conventional, online, and peer-to-peer avenues created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, dissemination, and operation of the platforms.

110. Ordinary consumers would not have recognized the potential risks of Facebook and Instagram when used in a manner reasonably foreseeable to DEFENDANTS.

113. The defects in Facebook and Instagram, including the lack of adequate warnings and instructions, existed at the time the products left DEFENDANTS' sole possession and continued to exist through the products' dissemination to and use by consumers, including Plaintiff. Facebook and Instagram were used without substantial change in their condition, by anyone other than Defendants and its employees, from the time of their development.

115. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used or signed up on Facebook and Instagram had she received adequate warnings and instructions that she could be harmed by platform design that hijacks a user's neural reward system, develop an addiction, be exposed to an algorithmic content feed causing negative social and appearance comparison and a negative false presentation of reality, and suffer injuries including social media compulsion, an eating disorder(s), depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

32

not appear to be widely promoted by Meta or even recommended to teen users on its platforms.<sup>10</sup> Although the website claims to be comprehensive in its coverage of safety information for the platforms, it fails to directly address any of the features or health risks listed above. The website states, “Welcome to our Youth Portal. Consider this your guide to all things Facebook: general tips, insider tricks, privacy and safety information, and everything else you need to have a great experience on Facebook. It's also a space for you to hear from people your age, in their own voices, about the issues that matter to them online. Take a look around — these resources were made specifically for you, your friends, and your real-life experiences online and off.”<sup>11</sup> The website merely provides instructional guides regarding mental health in general—it does not identify, warn, or take responsibility for the impact of the platform and its features on users’ mental health. By contrast, it shifts blame to other factors, such as third parties posting “suicide challenges,” the general societal issue of substance abuse, and the COVID-19 pandemic.

117. The only content on the website that has a semblance of a warning for the issues listed above is a link to a “Family Digital Wellness Guide” created by the Boston Children’s Hospital Digital Wellness Lab. Buried in this guide is a mention that screens should not be used an hour before bed, because “[u]sing screens before bedtime or naptime can excite kids and keep them from falling asleep. The ‘blue light’ that comes from TVs and other screen devices can disrupt your child's natural sleep cycle, making it harder for them to fall asleep and wake up naturally. . . . [Late screen use can] result[ ] in your child getting less sleep and struggling to wake up on time. On average, school-age children need 9-12 hrs of sleep each night.”

118. The “Family Digital Wellness Guide” only alludes to the platforms’ manipulation, addictiveness, behavioral control, and data tracking of users: “Advertisers target children with lots of commercials, everything from sneakers and toys to unhealthy foods and snacks high in fat,

---

<sup>10</sup> <https://www.facebook.com/safety/youth>

<sup>11</sup> *Id.*

sugar, and calories. Your children may also start becoming familiar with online influencers, who are also often paid to advertise different products and services on social media. Helping your child think critically about how advertising tries to change behaviors, helps your child understand the purpose of ads, and empowers them to make informed decisions.” The guide also briefly discusses cyber bullying.

119. Finally, the guide mentions the body image harms social media inflicts, but it solely blames influencers as the cause, rather than the platforms’ algorithms and features, and asserts that the burden to remedy the issue is on parents, rather than social media companies. “Science says: Tweens are often exposed to a lot of information online and through other media, both true and false, about how bodies ‘should’ look and what they can do to ‘improve’ their appearance. Certain body types are often idolized, when in reality bodies are incredibly diverse. There are many online accounts, websites, and influencers that make youth feel inadequate by encouraging them to lose weight or build up muscle, harming both their mental and physical health. . . . Protip: Actively listen and show that you care about how your child is feeling about puberty and how their body is changing. Talk with them about images on social and other media as these often set unrealistic ideals and help them understand that these images are often digitally altered or filtered so that people look more ‘beautiful’ than they really are.” No similar warning is offered to young users in Meta’s advertisements, at signup, or anywhere on the platform. Instead, Meta unreasonably and defectively leaves it to individuals’ research ability for a user to be informed about the key dangers of their platforms.

120. This informational report is from a third party, not Meta. Meta merely links to this information on a “Youth Portal” website in a location that is difficult and time-consuming to find. The is guide devoid of any mention of strong role that Facebook’s and Instagram’s individual or collective algorithm(s) and features play in each of these harms. Furthermore, it is uncertain how long even this limited information has been tethered by Meta.

121. On another Meta created website that proposes to “help young people become empowered in a digital world,” its “Wellness” subpage lists five activities, “mindful breathing,” “finding support,” “building resilience: finding silver linings,” “a moment for me,” and “taking a break.”<sup>12</sup> Nowhere does the website mention the mental health risks posed by Facebook and Instagram as a result of the product features listed above.

122. The platforms’ lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was the proximate cause and/or a substantial contributing factor in causing the harm to Plaintiff.

123. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, fees, and all such other relief as the Court deems proper.

**THIRD CAUSE OF ACTION**  
**STRICT LIABILITY - MANUFACTURING DEFECT**

124. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

125. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s resident State, Illinois. Plaintiff pleads this cause of action under all applicable product liability acts, statutes, and laws of the State of Illinois.

126. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

---

<sup>12</sup> <https://www.facebook.com/fbgetdigital/youth/wellness>

127. DEFENDANTS actively controlled the Facebook and Instagram platforms during the entire period Plaintiff used them, as DEFENDANTS expected.

128. Plaintiff used Facebook and Instagram while they were actively controlled by DEFENDANTS and any changes or modifications to the conditions of those platforms were foreseeable by these Defendants.

129. Plaintiff used Facebook and Instagram in a manner intended and/or foreseeable to DEFENDANTS.

130. Facebook and Instagram contained manufacturing defects as developed by DEFENDANTS and as placed in the stream of commerce in that the products deviated from component specifications and design, posed a risk of serious injury or death, and failed to perform as safely as the intended design would have performed.

131. Without limitation, examples of DEFENDANTS' inadequate development, management, operation, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences;
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;

133. The defective development, inspection, coding, programming, testing, monitoring, and operation of Facebook and Instagram was a proximate cause of Plaintiff's harms.

**FOURTH CAUSE OF ACTION  
PRODUCTS LIABILITY - NEGLIGENT DESIGN**

136. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

138. Facebook and Instagram were designed and intended to be used as social media platforms.

141. DEFENDANTS owed a duty to all reasonably foreseeable users to design a safe product.

143. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing the platforms with physically and mentally harmful features including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes", comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such

as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

144. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

145. The collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying, and promoting conflict, and multiplying harm in other ways.

146. The features combine to create a user interface of endless, auto-playing image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta’s algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

147. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

148. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive, content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

149. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

150. DEFENDANTS breached their duty by failing to use reasonable care in the design of Facebook and Instagram by negligently designing Facebook and Instagram to specifically appeal to minors, who were particularly unable to appreciate the risks posed by the platforms.

151. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that would make the product less addictive and harmful to minors.

152. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs to minimize these harms, including but not limited to:

- a. Designing platforms that did not include the features listed above while still fulfilling the social, interest, and business networking purposes of a social media platform;
- b. Default protective limits to length of use, frequency of use, or content types;
- c. Opt-in restrictions to length of use, frequency of use, or content types;
- d. session time limits;
- e. Blocks to use during certain times of day (such as morning, during work or school periods, or during evenings);

- f. Session time notifications, warnings, or reports;
- g. Warning of health effects of use and extended use upon sign-up;
- h. Parental controls;
- i. Self-limiting tools;
- j. Implementing labels on images and videos that have been edited through the platform;
- k. Age-based content filtering;
- l. General content filtering;
- m. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content (by causing negative social comparison and misleading lack of realism) such as in the genres of lifestyle, influencer, beauty, fitness, success flaunting, and/or heavily edited images and videos;
- n. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as inappropriate or salacious content;
- o. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as controversial, political, or emotionally weighted content;
- p. Algorithmic (whether default or opt-in) reductions or elimination in a user's feed of potentially harmful content such as content encouraging or promoting eating disorders, depressive thinking, self-harm, or suicide;
- q. Informational labelling about the misleading and unrealistic nature of the content on a user's feed and the resulting feed composite because of content editing and algorithmic presentation/sorting;
- r. Chronological presentation of content rather than algorithmic;
- s. Many other less harmful alternatives.

153. DEFENDANTS breached their duty by failing to use reasonable care by failing to use cost effective, reasonably feasible alternative designs that could have reduced mental and physical harms to users, especially youth. Instead, DEFENDANTS designed platforms that aggressively addict users with algorithms and features that increase addictiveness, use time, frequency of use, attention stealing, engagement with the platform, mental health harms, and profit to Meta, all to the detriment of users' wellbeing.

156. Plaintiff was harmed directly and proximately by the platforms DEFENDANTS' failure to use reasonable care in the design of Facebook and Instagram. Such harm includes social media compulsion, an eating disorder(s), depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

158. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

159. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

42

163. The DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

165. The DEFENDANTS owed a duty to all reasonably foreseeable users to disclose the risks associated with the use of Facebook and Instagram.

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;

- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
  - c. Facebook makes body-image issues worse for one-third of girls;
  - d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
  - f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
167. Facebook and Instagram are also defective for failing to warn users that:
- a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
  - e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and

- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

168. The failure of DEFENDANTS to adequately warn about its defective products, and its efforts to misleadingly advertise through conventional and social media avenues, created a danger of injuries described herein that were reasonably foreseeable at the time of design, development, coding, operation, and dissemination of the platforms.

169. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

170. Rather than warning users of likely harms, DEFENDANTS regularly fine-tune the platforms to aggressively socially and psychologically engineer new and ongoing users to increase addiction and exposure to their platforms, causing and increasing physical and psychological harm. The platforms encourage users to recruit more users across their personal electronic contacts.

171. The failure of DEFENDANTS to adequately warn about its defective products—and its efforts to misleadingly advertise through conventional, online, and peer-to-peer avenues—created a danger of injuries described herein that were reasonably foreseeable at the time of design, distribution, and operation of the platforms.

172. At all relevant times, DEFENDANTS could have provided adequate warnings and instructions to prevent the harms and injuries set forth herein, such as providing full and accurate information about the products in advertising, at point of dissemination/account registration, and at various intervals of the user interface.

173. A reasonable company under the same or similar circumstances would have warned and instructed of the dangers.

174. Plaintiff was injured as a direct and proximate result of DEFENDANTS' failure to warn and instruct because she would not have used Facebook and Instagram had she received adequate warnings and instructions that the platforms could cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

175. Meta's lack of adequate and sufficient warnings and instructions, and its inadequate and misleading advertising, was a substantial contributing factor in causing the harm to Plaintiff.

176. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTH CAUSE OF ACTION**  
**PRODUCTS LIABILITY – NEGLIGENT MANUFACTURING**

177. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

178. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

179. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, controlled, advertised, promoted, and or benefited from the products and platforms that Plaintiff used.

180. The platforms DEFENDANTS had a duty to use exercise reasonable care, in the development, coding, operation, maintained, inspecting, testing, and dissemination of Facebook and Instagram.

181. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram carelessly developed, coded, operated, maintained, inspected, tested, and disseminated was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner.

182. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram improperly developed, coded, operated, maintained, inspected, tested, and disseminated.

183. Without limitation, examples of DEFENDANTS' breaching their duty to exercise reasonable care in development, management, maintenance, testing, and inspecting include:

- a. Failure to follow Good Manufacturing Practices ("GMPs");
- b. Failure to inspect and test the computer programming underlying the platforms and features for errors, unintended output, or unintended executed results of a nature that could cause users harm;
- c. Failure to adequately inspect/test Facebook and Instagram during the development process;
- d. Failure to test the mental and physical health impacts of their platforms and product features, especially in regards to minors;
- e. Failure to implement procedures that would measure and confirm the behavioral and mental health impact of the platforms;
- f. Failure to timely establish procedures or practices to prevent Facebook and Instagram from having unintended mental and physical health consequences.
- g. Failure to test and research the actual user health impact cause by the *interaction* of the algorithm and other harm causing features listed above;
- h. Failure to test the platforms' output to users given various user inputs;

- i. Failure to adequately test the user health result of specific computer coding and programs that constitute the platforms and their features.

184. A reasonable manufacturer under the same or similar circumstances would have implemented appropriate manufacturing procedures to better ensure the quality of their product.

185. Plaintiff was injured as a direct and proximate result of the platforms DEFENDANTS failure to use reasonable care in the development, coding, operation, maintenance, inspection, testing, and dissemination.

186. DEFENDANTS negligent development, coding, operation, maintenance, inspection, testing, and dissemination of Facebook and Instagram was a substantial factor in causing Plaintiff's harms.

187. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTH CAUSE OF ACTION  
NEGLIGENCE AND/OR GROSS NEGLIGENCE**

188. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

189. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

190. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

191. Facebook and Instagram were the types of products that could endanger others if negligently made or promoted.

192. DEFENDANTS had a duty of reasonable care in designing, manufacturing, coding, inspecting, testing, marketing, advertising, promoting, supplying, disseminating and/or making publicly available the platforms to avoid causing harm to those that used Facebook and Instagram.

193. DEFENDANTS knew or should have known by the exercise of reasonable care, the risks to users of the platforms, of mental and physical health harms.

194. DEFENDANTS knew or should have known by the exercise of reasonable care, that minors and young people would be attracted to these products.

195. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was dangerous, harmful, and injurious when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

196. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are highly addictive and likely to cause mental and physical injuries as listed above.

197. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

198. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, programmed, assembled, inspected, tested, marketed, advertised, promoted, operated, managed, maintained, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

199. DEFENDANTS knew or should have known that Facebook and Instagram would cause harm to users if the following features, among others, were included: (1) engagement-based ranking (sorting content on a user’s feed based on engagement or “meaningful social interactions” rather than chronology); (2) intermittent variable rewards (a system of “likes”, comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram “Reels” content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments.

200. DEFENDANTS knew or should have known that engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers’ appearances, especially among teenage female users.

201. DEFENDANTS knew or should have known that the collaboration of these features multiplies the platforms’ power to inflict harm by heightening the platform’s addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

202. DEFENDANTS knew or should have known that the features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

203. DEFENDANTS knew or should have known that the combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

204. DEFENDANTS knew or should have known that these features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users' input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

205. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, particularly to young persons and minors.

206. DEFENDANTS were negligent, reckless and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm.

207. The negligence and extreme carelessness of DEFENDANTS includes, but is not limited to, the following:

- a. Failure to perform adequate testing of the Facebook and Instagram prior to marketing to ensure safety, including long-term testing of the product, and testing for physical and mental health injuries;
- b. Failure to warn consumers that Facebook and Instagram had not been adequately tested or researched prior to marketing to ensure safety;
- c. Failure to take reasonable care in the design of Facebook and Instagram;
- d. Failure to use reasonable care in the production/development of Facebook and Instagram;
- e. Failure to use reasonable care in the operation of Facebook and Instagram;
- f. Failure to use reasonable care in the coding/assembly of Facebook and Instagram;
- g. Failure to use reasonable care in advertising, promoting, and marketing Facebook and Instagram;
- h. Failure to use reasonable care in the dissemination of Facebook and Instagram without adequate warnings;
- i. Use of a design that includes features that cause mental and physical harm, including, but not limited to: (1) engagement-based ranking (sorting content on a user's feed based on engagement or "meaningful social interactions" rather than chronology); (2) intermittent variable rewards (a system of "likes," comments, strategically-timed notifications, promoting the content of new users and users who have not posted in a while, among other features); (3) face tracking and augmentation (*i.e.*, photo and video filters designed to make users appear more attractive); (4) endless scrollable content (especially auto-playing video content such as the Instagram "Reels" content feed); (5) the interaction of these features; and (6) other features of the platform which are currently unknown and hidden from users and governments;
- j. Use of a design, engagement-based ranking and intermittent variable rewards that DEFENDANTS knew or should have known that are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users;
- k. Use of design features that DEFENDANTS knew or should have known would interact to multiply the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways;
- l. Use of design features that DEFENDANTS knew or should have known would combine to create a user interface of endless, auto-playing, image and video

content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users;

- m. Use of design features that DEFENDANTS knew or should have known would result in presenting to users a false reality—it presents to users a world which is constantly controversial and negative; most other people are exceedingly more attractive than the user, and most other people are more successful and/or competent than the user;
- n. Failure to inspect Facebook and Instagram for them to operate properly and avoid addiction, overuse, or mental health harms;
- o. Failure to reasonably and properly test and properly analyze the testing of Facebook and Instagram under reasonably foreseeable circumstances;
- p. Failure to warn consumers about the dangers associated with use of Facebook and Instagram, in that it was unsafe, causes social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects;
- q. Failure to subsequently remedy harm-causing features of the platforms after Meta had actual knowledge of harm to users;
- r. Failure to provide any instructions regarding a safe manner, frequency, and length of use of the platforms per day;
- s. Failure of DEFENDANTS to verify the age of consumers creating accounts and using Facebook and Instagram;
- t. Failure to recall Facebook and Instagram;
- u. All other failures, acts and omissions set forth herein.

208. DEFENDANTS' acts and omissions constitute gross negligence because they constitute a total lack of care and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm to Plaintiff.

209. DEFENDANTS acted and/or failed to act willfully, and with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions had a great probability of causing significant harm and in fact resulted in such harm to Plaintiff.

210. Based on their strategic and intentional promotion, advertising, and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. After fine-tuning the product to addict users using features that also result in serious mental health and physical harms, DEFENDANTS reasonably should have foreseen the emotional distress this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them.

211. Defendants intentionally created an attractive nuisance to children, but simultaneously failed to provide adequate warnings or safeguards from the harmful effects they knew were occurring.

212. Plaintiff was injured as a direct and proximate result of negligence and/or gross negligence as described herein. Such harm includes social media compulsion, an eating disorder(s), depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

213. DEFENDANTS' negligence and/or gross negligence were a substantial factor in causing and or contributing to Plaintiff's harms.

214. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTH CAUSE OF ACTION**  
**NEGLIGENT MISREPRESENTATION**

215. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

216. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

217. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

218. DEFENDANTS were negligent, reckless, and careless and owed a duty to Plaintiff to make accurate and truthful representations regarding Facebook and Instagram, DEFENDANTS breached their duty, thereby causing Plaintiff to suffer harm.

219. DEFENDANTS represented to Plaintiff—via the media, advertising, website, social media, and promotions, among other misrepresentations described herein—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Long-term, frequent, prolonged use was harmless;
- c. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation; and
- d. An inaccurate and misleading portrayal of the platforms mental and physical health impact;

220. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;

- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
  - c. Facebook makes body-image issues worse for one-third of girls;
  - d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
  - e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
  - f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.
221. Meta also omitted to inform users that, as it knew or should have known:
- a. Engagement-based ranking and intermittent variable rewards are:
    - i. highly addictive,
    - ii. promote harmful social comparison,
    - iii. promote negative, controversial, and/or emotionally activating content,
    - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
    - v. encourage bullying and conflict,
    - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
    - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
  - b. Face tracking and augmentation (image and video filters):
    - i. inflict unrealistic and biased beauty standards upon users, and
    - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
  - c. The platforms cause the mental and physical health harms as listed above;
  - d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
  - e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and

223. DEFENDANTS knew or should have known these representations were false and negligently made them without regard for their truth.

225. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

227. Each of these misrepresentations were material at the time they were made. Each of the misrepresentations concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to sign up for or use Facebook and Instagram.

229. Plaintiff reasonably relied on these representations and were harmed as described herein. Plaintiff's reliance on DEFENDANTS' representation was a substantial factor in causing

Plaintiff's harms. Had DEFENDANTS told Plaintiff the truth about the safety and algorithmic framework of the platforms, Plaintiff would not have registered with them or used them.

230. DEFENDANTS' acts and omissions as described herein were committed in reckless disregard of Plaintiff's rights, interests, and well-being to enrich DEFENDANTS.

231. Plaintiff was injured as a direct and proximate result of DEFENDANTS' negligent misrepresentations regarding Facebook and Instagram as described herein. Such harm includes social media compulsion, an eating disorder(s), depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects.

232. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **NINTH CAUSE OF ACTION FRAUD**

233. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

234. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

235. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

236. DEFENDANTS' marketing, promotions, and advertisements contained deceptive and/or misleading statements, implications, images, and portrayals that the platforms were safe, improved social connectivity, and improved the mental and physical health of its users. For example, Meta's investor relations page states that "Facebook's mission is to give people the power to build community and bring the world closer together. People use Facebook to stay connected with friends and family, to discover what's going on in the world, and to share and express what matters to them."<sup>13</sup> In actuality, Facebook and Instagram pose a serious risk to users' mental and physical health, which Meta has long known.

237. DEFENDANTS' marketing, promotions and advertisements failed to disclose that the platforms, by contrast, were likely to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

238. The omissions were misleading and deceptive standing alone and were particularly deceptive in light of Meta's marketing, promotions and advertising of Facebook and Instagram as positive for users mental and physical health.

239. DEFENDANTS represented to Plaintiff—via the media, internet, advertising, its website, the platforms themselves, other social media, and promotions—that:

- a. Facebook and Instagram were safe and were not harmful;
- b. Facebook and Instagram were positive and beneficial to a users' wellbeing, improved social connectivity, and improved the mental and physical health of its users;
- c. Long-term, frequent, prolonged use was harmless;

---

<sup>13</sup><https://investor.fb.com/resources/default.aspx#:~:text=Facebook%20Investor%20Relations%3F-,What%20is%20Facebook's%20mission%20statement%3F,express%20what%20matters%20to%20them.>

- d. Facebook and Instagram increased social connectivity, rather than causing feelings of isolation;
- e. An inaccurate and misleading portrayal of the platforms mental and physical health impact; and
- f. Other misrepresentations described herein.

240. DEFENDANTS omitted/failed to ever inform Plaintiff and other consumers, by any media, that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

241. Meta also omitted/failed to inform users that, as it knew or should have known:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):

- i. inflict unrealistic and biased beauty standards upon users, and
- ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors; and
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features.

242. These representations were false and material. These omissions also communicated falsehoods and were material. The platforms are unsafe and were known by Meta to cause mental and physical health harms, especially in youth, such as social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

243. The above representations were communicated to Plaintiff.

244. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

245. DEFENDANTS' conduct was fraudulent and deceptive because their misrepresentations and omissions had the capacity to, were likely to, and, in fact, did deceive reasonable consumers including the Plaintiff. Reasonable consumers, including the Plaintiff, would have found it material to their purchasing decisions that the platforms' products posed unreasonable risks of substantial mental and bodily injury, including addiction resulting from the use of the products. Knowledge of these facts would have been a substantial factor in Plaintiff's decisions to purchase and consume Facebook and Instagram.

246. DEFENDANTS owed Plaintiff a duty to disclose these facts because they were known and/or accessible exclusively to DEFENDANTS, who have had exclusive and superior knowledge of the facts; because the facts would be material to reasonable consumers; because the platforms pose an unreasonable risk of substantial mental and bodily injury; and because the platforms made partial representations concerning the same subject matter as the omitted facts.

247. Plaintiff reasonably and justifiably relied on the misrepresentations and/or omissions. Reasonable consumers would have been expected to have relied on the platforms' misrepresentations and omissions.

248. DEFENDANTS knew or should have known that its misrepresentations and/or omissions were false and misleading, and intended for consumers to rely on such misrepresentations and omissions.

249. DEFENDANTS' misrepresentations and/or omissions were a substantial factor in causing Plaintiff's harms. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

250. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

### **TENTH CAUSE OF ACTION** **FRAUDULENT CONCEALMENT**

251. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

252. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

253. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

254. DEFENDANTS had a duty to disclose material facts about Facebook and Instagram to Plaintiff.

255. DEFENDANTS fraudulently and deceptively marketed Facebook and Instagram to Plaintiff as safe, healthful, or not harmful, and beneficial to user mental health and social connectedness when DEFENDANTS knew it to be untrue.

256. DEFENDANTS fraudulently and deceptively downplayed or minimized any risk associated with its platforms and product features. DEFENDANTS and others worked together to pitch news stories or other media content designed to downplay the risks of its platforms, suggesting that any concern was overblown, or a panic. These tactics mimic those used by the tobacco industry to sow seeds of doubt and confusion among the public, to initiate new users, to keep customers using Facebook and Instagram, and to avoid regulation or legislative efforts to control Meta.

257. Through their incredible power as the premier social media company (and/or association with that company), DEFENDANTS have silenced and suppressed information, research efforts, and public awareness efforts regarding the harmful health impact of their platforms.

258. DEFENDANTS fraudulently and deceptively concealed that Facebook and Instagram can cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia

nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms.

259. DEFENDANTS fraudulently and deceptively concealed they had not adequately researched or tested the platforms and its features to assess its safety before offering it on the market and promoting it to young people and adults.

260. DEFENDANTS fraudulently and deceptively concealed that the platforms were powerfully addictive.

261. DEFENDANTS further failed to disclose to Plaintiff that the platforms are designed to create and sustain an addiction. DEFENDANTS also manipulated the platforms algorithms and features in ways that could and would impact their addictiveness and mental health impact, and DEFENDANTS did so without notifying Plaintiff. DEFENDANTS actively concealed the innerworkings of its platforms and their mental health impacts.

262. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

263. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,

- iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
- i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the collaboration of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

264. Each of these misrepresentations and omissions were material at the time they were made. Each of the misrepresentations and omissions concerned material facts that were essential to the analysis undertaken by Plaintiff as to whether to register or use the platforms.

265. Plaintiff did not know of the facts that DEFENDANTS concealed.

266. DEFENDANTS intended to deceive Plaintiff and the public by concealing these facts.

267. DEFENDANTS had a duty to accurately provide this information to Plaintiff. In concealing this information from Plaintiff, DEFENDANTS breached their duty. DEFENDANTS also gained financially from this concealment, and because of their breach.

268. DEFENDANTS had ample opportunities to disclose these facts to Plaintiff, through advertising, on its websites, platforms, and on other social media. DEFENDANTS concealed material information at all relevant times, through today. DEFENDANTS have yet to disclose the truth about Facebook and Instagram.

269. Plaintiff relied to her detriment on DEFENDANTS' fraudulent omissions. Had Plaintiff been adequately informed of the material facts concealed from her regarding the safety of the platforms, and not intentionally deceived by DEFENDANTS, she would not have signed up for or used Facebook and Instagram.

270. DEFENDANTS' fraudulent concealment was a substantial factor in Plaintiff's harms as described herein, including: social media compulsion, an eating disorder(s), depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

271. Plaintiff was injured as a direct and proximate result of DEFENDANTS' fraudulent conduct as described herein.

272. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**ELEVENTH CAUSE OF ACTION**  
**CONSPIRACY TO COMMIT FRAUD**

273. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

274. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability and conspiracy, statutes, and the common law of the State of Illinois.

275. DEFENDANTS entered into an agreement to advance their financial interests by injuring Plaintiff. Specifically, DEFENDANTS worked in concert to maintain and maximize the number of users addicted to Facebook and Instagram to ensure a steady and growing customer base.

276. DEFENDANTS sought to accomplish this objective by: (1) designing a product that was intended to addict its users to dopamine-triggering stimuli on its electronic platforms (similar to electronic gambling platforms); (2) marketing, advertising, promoting and misbranding that platform to consumers, including the vulnerable youth market; and (3) defrauding regulators and the public to advance their interests.

277. Plaintiff's addiction to the platforms was a primary object of the Conspiracy. DEFENDANTS orchestrated efforts with a unity of purpose to addict this generation of teenagers and young adults to its platforms by way of unlawful conduct in marketing, promoting, manufacturing, designing, and disseminating Facebook and Instagram that substantially contributed to the Plaintiff's injuries as alleged herein.

278. DEFENDANTS further conspired with one another by setting out to entice and lure new users of the platforms as a wrongful, unlawful, and tortious means to make a profit.

279. Plaintiff demands the applicable relief set forth in the Prayer for Relief below.

280. DEFENDANTS' conspiracy involved:

- a. Developing social media platforms to be as addictive as possible, regardless of mental and physical health impacts;
- b. Suppressing internal and external efforts to research the harmful effects of those platforms;
- c. Suppressing internal and external efforts to inform consumers of the harmful effects of those platforms;

- d. Making knowingly false and misleading representations and omissions to government organizations, personnel, legislators, and regulators, including at congressional hearings; and
- e. Engaging in lobbying efforts and political donations to discourage office holders from performing oversight of its platforms.

281. DEFENDANTS' conduct violated state law and constituted a conspiracy to harm Plaintiff. Plaintiff brings a cause of action for conspiracy to commit fraud under applicable state statutory and common law.

282. DEFENDANTS' conspiracy to commit fraud was a substantial factor in causing Plaintiff's harms. Plaintiff was injured, as described herein, as a direct and proximate result of DEFENDANTS' unlawful conspiracy as described herein.

283. Plaintiff demands judgment against Defendants for compensatory, treble, and punitive damages, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWELFTH CAUSE OF ACTION UNJUST ENRICHMENT**

284. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

285. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

286. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

287. DEFENDANTS concealed from Plaintiff that, according to its own research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse; and
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

288. DEFENDANTS also concealed from Plaintiff that:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;
- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;

- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

289. DEFENDANTS received a measurable benefit at the expense of Plaintiff in the form of ad revenue and other revenue derived from consumers use of Facebook and Instagram.

290. DEFENDANTS appreciated, recognized, and chose to accept the monetary benefits Plaintiff's registration and use of the platforms conferred onto DEFENDANTS at the Plaintiff's detriment. These benefits were the expected result of DEFENDANTS acting in their pecuniary interests at the expense of its users.

291. The harm causing features listed above were the same platform components that increased Meta's revenue—addiction and overuse of the platforms directly creates increased ad revenue for the company. The benefit to Meta came directly at the expense of the Plaintiff's time, mental wellness, and physical health.

292. There is no justification for DEFENDANTS' enrichment. It would be inequitable, unconscionable, and unjust for DEFENDANTS to be permitted to retain these benefits because the benefits were procured because of their wrongful conduct.

293. DEFENDANTS wrongfully obfuscated the harm caused by their conduct. Thus, Plaintiff, who mistakenly enriched DEFENDANTS by relying on DEFENDANTS' fraudulent representations, could not and did not know the effect that using Facebook and Instagram would have on Plaintiff's health.

294. Plaintiff is entitled to restitution of the benefits DEFENDANTS unjustly retained and/or any amounts necessary to return Plaintiff to the position she occupied prior to dealing with DEFENDANTS. Due to the sprawling, decades-long concern about the impacts of technology and the internet on mental and physical health, and litigation commonly following injuries afflicted

using the internet, and other notice they have received because of lawsuits filed against them, DEFENDANTS are reasonably notified that Plaintiff would expect compensation from DEFENDANTS' unjust enrichment stemming from their wrongful actions.

295. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**THIRTEENTH CAUSE OF ACTION**  
**VIOLATION OF UNFAIR TRADE**  
**PRACTICES/CONSUMER PROTECTION LAWS**

296. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

297. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

298. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

299. Plaintiff herein brings a cause of action for consumer fraud and/or unfair and deceptive trade practices and/or unfair business practices under applicable state law.

300. DEFENDANTS are on notice that such claims may be asserted by Plaintiff.

301. Plaintiff registered for and used FACEBOOK AND INSTAGRAM and suffered injuries because of DEFENDANTS' actions in violation of these consumer protection laws.

- a. Representing that goods or services have approval, characteristics, uses, or benefits that they do not have;
- b. Advertising goods or service with the intent not to sell them as advertised;
- c. Engaging in fraudulent or deceptive conduct that creates a likelihood of confusion;
- d. Engaging in fraudulent or deceptive conduct that causes actual confusion or misunderstanding as to the approval of certain goods; and
- e. Many other fraudulent, unfair, and/or deceptive as stated elsewhere in this complaint.

305. DEFENDANTS have a statutory duty to refrain from fraudulent, unfair, and deceptive acts or trade practices in the design, development, manufacture, promotion, and sale of their products. DEFENDANTS' deceptive, unconscionable, unfair and/or fraudulent representations and material omissions to Plaintiff constituted consumer fraud and/or unfair and deceptive acts and trade practices in violation of consumer protection statutes, including, but not limited to, the following:

- 72

306. Under these and other consumer protection statutes, DEFENDANTS are the suppliers, distributors, programmers, manufacturers (developers), advertisers, marketers, promoters, and sellers (disseminators) of Facebook and Instagram, who are subject to liability under such legislation for fraudulent, unfair, deceptive, and unconscionable consumer practices. The actions and omissions of DEFENDANTS are uncured or incurable and DEFENDANTS were aware of the same well in advance of this filing and failed to take any action to cure their actions or omissions.

307. Plaintiff justifiably relied to their detriment on DEFENDANTS' misrepresentations and omissions in deciding to use Facebook and Instagram.

308. By reason of the fraudulent and unlawful acts engaged in by DEFENDANTS, and as a direct and proximate result thereof, Plaintiff has sustained economic losses and other damages and are entitled to statutory and compensatory damages in an amount to be proven at trial.

309. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**FOURTEENTH CAUSE OF ACTION**  
**BREACH OF EXPRESS WARRANTY**

310. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

311. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

314. Upon information and belief, DEFENDANTS expressly warranted through public statements, press releases, advertisements, marketing materials, sign-up notices, clickwrap (and/or browsewrap or scrollwrap), and descriptions that the platforms Facebook and Instagram were safe for their intended use and that they were safe for youth to use.

316. These affirmations of fact became the basis of the bargain between DEFENDANTS and Plaintiff, thereby creating express warranties that Facebook and Instagram would conform to Meta's affirmations of fact, representations, promises, and descriptions.

318. These express communications contained misrepresentations and failed to warn of the serious and known risks of Facebook and Instagram as alleged herein.

321. All of the aforementioned written or electronic materials are known to DEFENDANTS and in their possession, and it is Plaintiff's belief that these materials shall be produced by DEFENDANTS and made part of the record once discovery is completed.

323. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

**FIFTEENTH CAUSE OF ACTION**  
**BREACH OF AN IMPLIED WARRANTY OF MERCHANTABILITY**

326. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's

resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

327. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

328. DEFENDANTS at all times were merchants with respect to the Facebook and Instagram platforms provided to Plaintiff and were in the business of programming, developing, disseminating, and operating such products.

329. Each platform Meta provided comes with an implied warranty that it will be merchantable and fit for the ordinary purpose for which it would be used.

330. The ordinary intended purposes of the platforms—and the purpose for which they are marketed, promoted, and made available—is to serve as safe social media platforms and allow users to connect with friends, create new and palatable association with strangers, and groups online.

331. The platforms are not fit for that use—or any other use—because they pose significant risks of substantial mental and physical injury resulting from the use of the products. When used as intended or reasonably foreseeable, Facebook and Instagram adversely impact, worsen, or aggravate users' mental health.

332. Due to these and other features, the platforms are not fit for their ordinary, intended use and Facebook and Instagram are in fact defective and fail to conform to the platforms implied warranties.

333. DEFENDANTS have unlawfully breached the platforms implied warranty of merchantability because Facebook and Instagram were not in merchantable condition when made

available, were defective when made available, and do not possess even the most basic degree of fitness for ordinary use.

334. Despite having received notice of these defects, DEFENDANTS continue to misrepresent the nature of its products and breach its implied warranties.

335. Plaintiff has had sufficient direct dealings with the platforms DEFENDANTS via its website, apps, platforms, or through retailers acting as agents authorized to distribute Facebook and Instagram (Apple/the “App Store”) to establish privity between the platforms.

336. Further, Plaintiff was a third-party beneficiary of the platforms’ agreements with other entities for the distribution of Facebook and Instagram to consumers. Specifically, Plaintiff is the intended beneficiary of the platforms’ implied warranties. The platforms’ products are manufactured with the express purpose and intent of being made accessible to consumers.

337. Plaintiff would not have used Facebook and Instagram or would not have registered or used on the same terms, had she known the facts these Defendants failed to disclose.

338. DEFENDANTS’ breach of these warranties were a substantial factor in causing Plaintiff’s harms.

339. Plaintiff was injured as a direct and proximate result of DEFENDANTS’ breach of implied warranties of merchantability. Plaintiff has been harmed by DEFENDANTS’ failure to deliver merchantable products in the form of addiction and other negative health consequences.

340. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SIXTEENTH CAUSE OF ACTION**  
**FITNESS FOR A PARTICULAR PURPOSE**

341. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

342. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

343. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

344. DEFENDANTS violated state law for breach of implied warranties and Plaintiff herein will bring a cause of action for breach of implied warranty of fitness for a particular purpose under applicable State common law.

345. Plaintiff intended to use Facebook and Instagram as safe social media platforms and to improve Plaintiff's mental health, sense of community, and emotional connectedness with others.

346. DEFENDANTS knew at that time of account registration, and/or had reason to know, the particular purpose for which the products were required by Plaintiff, as evidenced by DEFENDANTS' written and/or electronic statements, descriptions, and affirmations of fact on its websites, print or electronic advertising, marketing materials, sign-up notices, and clickwrap (and/or browsewrap or scrollwrap) that Facebook and Instagram would improve users' mental health, sense of community, and emotional connectedness with others.

349. As described herein, DEFENDANTS breached this implied warranty because the platforms use features that cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harms, which may cause or contribute to additional disease.

351. DEFENDANTS authored the documents and/or made the statements upon which these warranty claims were based and, in doing so, defined the terms of those warranties. The Facebook and Instagram made available by DEFENDANTS did not conform to DEFENDANTS' promises, descriptions or affirmations and were not adequately designed, developed, tested, promoted and/or fit for the particular purposes for which they were intended.

353. DEFENDANTS' breach of these implied warranties were a substantial factor in causing Plaintiff's harms.

354. As a direct and proximate result of DEFENDANTS' breach of these warranties, Plaintiff suffered serious injuries and/or sequelae thereto as alleged herein.

355. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**SEVENTEENTH CAUSE OF ACTION**  
**INTENTIONAL INFLICTION OF EMOTIONAL DISTRESS**

356. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

357. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

358. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

359. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

360. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

361. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause severe emotional

distress when used by Plaintiff in a reasonably foreseeable manner, particularly with minors and young adults.

362. DEFENDANTS knew or, by the exercise of reasonable care, should have known ordinary consumers such as Plaintiff would not have realized the potential risks and dangers of Facebook and Instagram. Facebook and Instagram are fine-tuned to addict users, and forcefully cause physical and mental health harms.

363. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

364. DEFENDANTS knew or should have known that Facebook and Instagram needed to be researched, designed, manufactured, coded, assembled, inspected, tested, marketed, advertised, promoted, supplied, disseminated, and/or made available properly, without defects and with due care to avoid needlessly causing harm.

365. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious harm, including severe emotional distress, particularly to young persons and minors.

366. DEFENDANTS knew or should have known that many of the youth who were encouraged to use the platforms had preexisting mental health issues and/or eating disorders who were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

367. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

368. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

369. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous, had a great probability of causing severe emotional distress, and in fact resulted in such harm to Plaintiff.

370. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

371. Plaintiff was injured as a direct and proximate result of the reckless, extreme, and outrageous conduct as described herein. Such harm includes social media compulsion, an eating disorder(s), depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

372. DEFENDANTS’ conduct, as described above, was intentional, reckless, wanton, malicious, fraudulent, oppressive, extreme, and outrageous, and displayed an entire lack of care and a conscious and depraved indifference to the consequences of their conduct—including to the health, safety, and welfare of their consumers—and warrants an award of punitive damages.

373. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**EIGHTEENTH CAUSE OF ACTION**  
**NEGLIGENT INFLICTION OF EMOTIONAL DISTRESS**

374. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

375. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff’s resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

376. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

377. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

378. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

381. DEFENDANTS knew or, by the exercise of reasonable care, should have known that Facebook and Instagram posed risks including the risks of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, as described herein, that were known and knowable in light of scientific and medical knowledge that was generally accepted in the scientific community at the time of development, dissemination, public release, and operation of the platforms.

383. DEFENDANTS knew or should have known that Facebook and Instagram could cause serious risk of harm, including severe emotional distress, particularly to young persons and minors.

84

were at enhanced risk of harm by utilizing the misleadingly described platforms, which misrepresented the mental health effects of the platforms and failed to warn of the products' features' impacts and risks.

385. DEFENDANTS were negligent, reckless, and careless and failed to take the care and duty owed to Plaintiff, thereby causing Plaintiff to suffer harm, including severe emotional distress.

386. DEFENDANTS' acts and omissions were extreme and outrageous because they constitute a total lack of care, recklessness, and an extreme departure from what a reasonably careful company would do in the same situation to prevent foreseeable harm and severe emotional distress to Plaintiff.

387. DEFENDANTS acted with conscious and reckless disregard for the rights and interests of Plaintiff, and their acts and omissions were extreme and outrageous had a great probability of causing severe emotional distress and in fact resulted in such harm to Plaintiff.

388. Based on their strategic and intentional promotion, advertising and marketing history, DEFENDANTS reasonably should have foreseen that young people would try Facebook and Instagram and quickly become addicted to Facebook and Instagram, resulting in teenagers and young adults developing lifelong addictions. DEFENDANTS were aware of the risks their platforms posed, as listed herein. After fine-tuning the platforms to be addictive, attention-grabbing, and attention-holding, DEFENDANTS reasonably should have foreseen the emotional distress, mental, and physical issues this would cause on the individuals who would get addicted, as well the stress this would place on their loved ones around them. Particularly, DEFENDANTS should have foreseen that young people would be particularly susceptible to experiencing severe emotional distress.

389. Plaintiff was injured as a direct and proximate result of the negligent, reckless, extreme, and outrageous conduct as described herein. Such harm includes social media

compulsion, an eating disorder(s), depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

390. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

**NINETEENTH CAUSE OF ACTION**  
**NEGLIGENT FAILURE TO RECALL/RETROFIT**

391. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

392. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident State, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

393. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

394. DEFENDANTS knew or should have known through the exercise of reasonable care, the risks to consumers posed by the platforms and their features.

395. DEFENDANTS knew or should have known through the exercise of reasonable care, that minors and young people would be attracted to these products.

396. DEFENDANTS knew or, by the exercise of reasonable care, should have known use of Facebook and Instagram was harmful and had the potential to cause social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm,

insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects, which may cause or contribute to additional disease.

397. Defendants owed a duty to the users of the Facebook and Instagram, including Plaintiff, to exercise reasonable care in conducting their business to properly and reasonably design, research, develop, manufacture, produce, process, assemble, inspect, supply, distribute, deliver, broker, market, warn, maintain, repair, modify, recall, retrofit, engineer, test, recommend, advertise, and/or make available Facebook and Instagram.

398. Defendants also owed a continuing duty to Plaintiff to remove, recall, or retrofit the unsafe and/or defective platforms across the United States (including in Plaintiff's state).

399. As discussed, Defendants knew or reasonably should have known that the platforms were dangerous and not safe for use (without added protective measures and/or removal of harm causing features, if at all).

400. Defendants knew or, in the exercise of reasonable and ordinary care, should have known that the platforms were defective and unsafe for Plaintiff, who is a person likely to use the platforms for the purpose and in the manner for which the platforms were intended to be used and for purposes reasonably foreseeable to Defendants.

401. However, at all times, Defendants negligently breached said duties and unreasonably and negligently allowed the platforms to be used by Plaintiff without proper recall or retrofit or warning.

402. Defendants have also not made any reasonable effort to remove and/or retrofit the serious safety risk posed by the platforms to consumers.

403. In failing to properly recall and/or retrofit Facebook and Instagram, or even warn of the serious safety risks the platforms pose to consumers and the public, Defendants have failed

to act as a reasonable manufacturer, designer, or distributor would under the same or similar circumstances and failed to exercise reasonable care.

404. Plaintiff was injured as a direct and proximate result of the negligent conduct as described herein. Such harm includes social media compulsion, an eating disorder(s), depression, severe anxiety, and a reduced inclination or ability to sleep, among other harmful effects, which may cause or contribute to additional disease.

405. Plaintiff demands judgment against DEFENDANTS for compensatory, treble, and punitive damages, medical monitoring to diagnose the platforms induced injuries at an earlier date to allow for timely treatment and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

#### **TWENTIETH CAUSE OF ACTION** **MEDICAL MONITORING**

406. Plaintiff incorporates by reference each preceding and succeeding paragraph as though set forth fully at length herein.

407. Plaintiff pleads all Causes of Action of this Complaint in the broadest sense, pursuant to all laws that may apply under choice-of-law principles, including the law of Plaintiff's resident state, Illinois. Plaintiff pleads this Cause of Action under all applicable product liability acts, statutes, and laws of the State of Illinois.

408. At all relevant times, DEFENDANTS designed, developed, managed, operated, inspected, tested (or not), marketed, advertised, promoted, disseminated, made publicly available, and/or benefited from Facebook and Instagram and therefore owed a duty of reasonable care to avoid causing harm to those that used it, such as Plaintiff.

409. Facebook and Instagram cause or exacerbate mental and physical health harms, including, but not limited to, depression, anxiety, suicidal ideation, self-harm, thoughts of self-

harm, and eating disorders, among other harmful effects, which may cause or contribute to additional disease.

410. According to Meta's internal research:

- a. At least five-to-six percent of fourteen-year-olds admit to addiction to the platform;
- b. Sixty-six percent of teen girls and forty-six percent of teen boys have experienced negative social comparisons on Instagram;
- c. Facebook makes body-image issues worse for one-third of girls;
- d. Thirteen-and-one-half percent of teen-girl Instagram users say the platform makes thoughts of suicide and self-injury worse;
- e. Seventeen percent of teen-girl Instagram users say the platform makes eating issues worse;
- f. Instagram users are twice as likely to develop an eating disorder as those who don't use social media.

411. Facebook and Instagram cause harm by the following product effects:

- a. Engagement-based ranking and intermittent variable rewards are:
  - i. highly addictive,
  - ii. promote harmful social comparison,
  - iii. promote negative, controversial, and/or emotionally activating content,
  - iv. promote negative, harmful, and/or dangerous interest groups and/or content creators,
  - v. encourage bullying and conflict,
  - vi. can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, such as content related to eating disorders, depression, or self-harm, and
  - vii. present a false reality (regarding one's comparative status to their peers, and/or the general state of world or political affairs);
- b. Face tracking and augmentation (image and video filters):
  - i. inflict unrealistic and biased beauty standards upon users, and
  - ii. cause harmful social comparison based on a misleading curation of peers' appearances and success, especially among teenage female users;

- c. The platforms cause the mental and physical health harms as listed above;
- d. The likelihood of these harms and likely severity for these harms are even greater for the developing brains of minors;
- e. The likelihood and intensity of these harmful effects are exacerbated by the interaction of these features; and
- f. The likelihood and intensity of these harmful effects are increased by other features and innerworkings of the platforms which are currently publicly unknown and hidden from users and governments.

412. Engagement-based ranking and intermittent variable rewards are highly addictive, promote harmful social comparison, encourage bullying and conflict, can trap users in a cycle of viewing content that is innately harmful or in a manner that is harmful, and present a false reality. Image and video filters inflict unrealistic and biased beauty standards upon users and cause harmful social comparison based on a misleading curation of peers' appearances, especially among teenage female users.

413. The collaboration of these features multiplies the platforms' power to inflict harm by heightening the platform's addictive nature, increasing exposure to content that triggers negative social comparison, exposing users to innately harmful content, increasing time of exposure to harm, further encouraging bullying and promoting conflict, and multiplying harm in other ways.

414. The features combine to create a user interface of endless, auto-playing, image and video content, that is algorithmically sorted to place the most attention-grabbing content at the top and/or in a distilled feed that is very difficult to cease consuming, especially for young users. Content that is promoted by the algorithm is often related to beauty, success/wealth flaunting, or lifestyles, which causes negative physical or social comparison, especially among teens. Meta's algorithms also promote controversial, disturbing, negative, and/or emotionally charged content causing harm to users.

415. The combined result of these features is to present to users a false reality—it presents to users a world which is constantly controversial and negative; where most other people are exceedingly more attractive than the user; where most other people are exceedingly more successful and/or competent than the user; and which will facilitate and encourage harmful behaviors such as self-harm and eating disorders.

416. These features take advantage of biological systems, human behavior, and psychology, to addict and condition users to engage in repetitive content-consuming actions such as scrolling, “liking,” and sharing content in search of repeated dopamine releases. All the while, the users’ input and behavior are tracked to allow the platform to automatically tune itself to each individual user to become as addictive and difficult to stop engaging with as possible.

417. Potential health harms from these features include, among other types of harm, social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

418. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has developed mental and physical health issues that will require life-long monitoring treatment.

419. As a direct and proximate result of DEFENDANTS’ conduct, Plaintiff has a significantly increased risk of developing a serious latent disease and/or injury, suffering further injury at an unknown date in the future. Such injuries include the development and/or exacerbation of social media addiction, depression, body dysmorphia, anxiety, suicidal ideation, self-harm, thoughts of self-harm, insomnia, eating disorder, anorexia nervosa, bulimia nervosa, death by suicide, death by eating disorder, lack of focus, ADHD, difficulty sleeping, fatigue, headaches, migraines, loss of vision, eye strain, among other harmful effects.

420. Monitoring procedures exist that makes the early detection and prevention of the above technology-related and/or induced diseases and mental health issues possible. Many of the above physical and mental issues can lead to other physical and mental health injuries long-term that can be detected and prevented by existing medical and psychological testing and treatment.

421. For example, eating disorders can cause hormone/growth problems, heart problems, neurological problems, abnormal cell growth, and cancer. Anxiety can lead to social impairment, relationships, suicide risk, more frequent hospitalizations, substances abuse (prescribed and non-prescribed), unemployment, somatoform. Nearly all the other kinds of harms listed above commonly lead to other health issues.

422. These procedures are different from that normally recommended in the absence of the exposure. These monitoring procedures include non-routine surveillance studies, laboratory testing, and physical examinations, and would be reasonably necessary according to contemporary scientific principles.

423. Plaintiff has suffered physical, mental, and emotional harms. Anxiety, depression, sleep deprivation, eating disorders (and many of the other harms listed above) are well-known to cause long-lasting conditions, hidden conditions, and health problems that do not manifest fully until much later in life. Existing medical research indicates that these issues can cause permanent digestive tract injury, brain injury, cardiovascular disorders, and many other harms. The injuries such products cause on the human body has already been inflicted in its users, such as Plaintiff, but the full extent of the injury will not manifest until later in Plaintiff's life. Thus, because of DEFENDANTS' conduct, it is reasonably necessary that Plaintiff be placed under periodic screening and/or diagnostic testing beyond that normally recommended in the absence of the issues Plaintiff has suffered due to use of these platforms.

424. Plaintiff demand judgment against DEFENDANTS for medical monitoring damages to diagnose the platforms induced injuries at an earlier date to allow for timely treatment

and prevention of exacerbation of injuries, together with interest, costs of suit, attorneys' fees, and all such other relief as the Court deems proper.

425. Such other relief as the Court deems proper.

## **VII. TIMELINESS AND TOLLING OF STATUTES OF LIMITATIONS**

426. Through the exercise of reasonable diligence, Plaintiff did not and could not have discovered that Facebook and Instagram caused her injuries and/or sequelae thereto because, at the time of these injuries and/or sequelae thereto, the cause was unknown to Plaintiff.

427. Plaintiff did not suspect and had no reason to suspect Facebook and Instagram caused her injuries and/or sequelae thereto until less than the applicable limitations period prior to the filing of this action.

428. In addition, DEFENDANTS' fraudulent concealment has tolled the running of any statute of limitations. Through their affirmative misrepresentations and omissions, DEFENDANTS actively concealed from Plaintiff the risks associated with the defects of Facebook and Instagram and that these products caused her injuries and/or sequelae thereto. Through their ongoing affirmative misrepresentations and omissions, DEFENDANTS committed continual tortious, and fraudulent acts that continue to this day.

429. As a result of DEFENDANTS' fraudulent concealment, Plaintiff was unaware and could not have reasonably known or learned through reasonable diligence that she had been exposed to the defects and risks alleged herein and that those defects and risks were the direct and proximate result of DEFENDANTS' acts and omissions.

## **VIII. DEMAND FOR A JURY TRIAL**

Plaintiff hereby demands a trial by jury.

## IX. PRAYER FOR RELIEF

Plaintiff prays for judgment against DEFENDANTS to the full extent of the law, including but not limited to:

1. Entering judgment for Plaintiff and against DEFENDANTS;
2. Entering an Order that Defendants are jointly and severally liable;
3. Damages to compensate Plaintiff for injuries sustained as a result of the use of the platforms, including, but not limited to, physical pain and suffering, mental anguish, loss of enjoyment of life, emotional distress, expenses for hospitalizations and medical treatments, other economic harm that includes, but is not limited to, lost earnings and loss of earning capacity;
4. Awarding actual and compensatory damages;
5. Awarding statutory damages in the maximum amount permitted by law;
6. Awarding exemplary, treble, and/or punitive damages in an amount in excess of the jurisdictional limits;
7. Awarding reasonable attorneys' fees;
8. Awarding experts' fees;
9. Awarding costs of litigation;
10. Awarding pre-judgment and post-judgment interest at the lawful rate;
11. A trial by jury on all issues of the case;
12. Awarding medical monitoring costs or programs; and
13. Any other relief as this court may deem equitable and just, or that may be available.

Dated: July 27, 2022

## I. INTRODUCTION

1. Over the last two decades, more and more of our lives have moved onto social media platforms and other digital public spaces. In this vast, still largely unregulated universe of digital public spaces, which are privately owned and primarily run for profit, there exists tension between what is best for technology companies' profit margins and what is best for the individual user (especially the predictable adolescent user) and for society. Business models are often built around maximizing user engagement, not to ensure that users engage with the platform and one another in safe and healthy ways. Technology companies focus on maximizing time spent, not time well spent. In recent years, there has been growing concern about the impact of digital technologies, particularly social media, on the mental health and wellbeing of adolescents. Many researchers argue that social media facilitates cyberbullying, contributes to obesity and eating disorders, instigates sleep deprivation to achieve around-the-clock platform engagement, encourages children to negatively compare themselves to others and develop a broad discontentment for life, and has been connected to depression, anxiety, self-harm, and ultimately suicide ideation, suicide attempts, and completed suicide.

2. This matter arises from an egregious breach of the public trust by Defendant Meta Platforms, Inc. ("Meta"). Meta was originally incorporated in Delaware on July 29, 2004, as "TheFacebook, Inc." On September 20, 2005, the company changed its name to "Facebook, Inc." On October 28, 2021, the company assumed its current designation. While Plaintiff has attempted to identify the specific Meta subsidiary(s) that committed each of the acts alleged in this Complaint, Plaintiff was not always able to do so, in large part due to ambiguities in Meta's and its subsidiaries' own documents, public representations, and lack of public information. However, upon information and belief, Meta oversees the operations of its various platforms and subsidiaries, some of which have been identified and are listed below. For this reason, unless otherwise specified, the shorthand "Meta" contemplates the apparent control that Defendant Meta Platforms, Inc. wields over the subject social networks' overall operations and, therefore, further refers to its various subsidiaries and predecessors. To the extent this assumption is incorrect, the knowledge of which Meta subsidiary, current or former, is responsible for specific conduct is

knowledge solely within Defendants' possession, the details of which Plaintiff should be permitted to elucidate during the discovery phase.

3. Meta knowingly exploited its most vulnerable users—children throughout the world—to drive corporate profit. Meta operates the world's largest family of social networks, enabling billions of users worldwide to connect, view, and share content through mobile devices, personal computers, and virtual reality headsets. A user does not have to pay to create an account. Instead of charging account holders to access the platform, Meta became one of the world's most valuable companies from the sale of advertisement placements to marketers across its various platforms and applications. For example, upon information and belief, Meta generated \$69.7 billion from advertising in 2019, more than 98% of its total revenue for the year. Meta can generate such revenues by marketing its user base to advertisers. Meta collects and analyzes data to assemble virtual dossiers on its users, covering hundreds if not thousands of user-specific data segments. This data collection and analysis allows advertisers to micro-target advertising and advertising dollars to very specific categories of users, who can be segregated into pools or lists using Meta's data segments. Only a fraction of these data segments come from content that is explicitly designated by users for publication or explicitly provided by users in their account profiles. Many of these data segments are collected by Meta through surveillance of each user's activity on the platform and off the platform, including behavioral surveillance that users are not even aware of, like navigation paths, watch time, and hover time. At bottom, the larger Meta's user database grows, the more time the users spend on the database, and the more detailed information that Meta can extract from its users, the more money Meta makes.

4. Defendants have intentionally designed their products to maximize users' screen time, using complex algorithms designed to exploit human psychology and driven by advanced computer algorithms and artificial intelligence available to two of the largest technology companies in the world. Defendants have progressively modified their products to promote problematic and excessive use that they know threatens the actuation of addictive and self-destructive behavioral patterns.

5. Two Meta products, the www.Facebook.com (“Facebook”) and www.Instagram.com (“Instagram”) websites and respective interrelated apps (collectively “Meta 2”), rank among the most popular social networking products, with more than two billion combined users worldwide. It is estimated that nine out of ten teens use social media platforms, with the average teen using the platforms roughly three hours per day. Given the delicate, developing nature of the teenage brain and Meta’s creation of social media platforms designed to be addictive, it comes as no surprise that we are now grappling with the ramifications of Meta’s growth-at-any-cost approach, to wit, a generation of children physiologically entrapped by products the effects of which collectively result in long-lasting adverse impact on their rapidly evolving and notoriously precarious mental health.

6. As of October 2021, Facebook had roughly 2.91 billion monthly active users, thus reaching 59% of the world’s social networking population, the only social media platform to reach over half of all social media users. Instagram has become the most popular photo sharing social media platform amongst teenagers and young adults in the United States, with over 57 million users below the age of eighteen, meaning that 72 percent of America’s youth use Instagram.

7. A user’s “feed” on both Facebook and Instagram is comprised of an endless series of photos, videos, text captions, and comments posted by accounts that the user follows, along with advertising and content specifically selected and promoted by Instagram and Facebook.

8. Instagram also features a “discover” page where a user is shown an endless feed of content that is selected by an algorithm designed by Instagram based upon the users’ data profile: demographics, prior activity in the platform, and other data points. Meta has added similar features to Facebook on the apps “menu” and “watch” sections.

9. Over the past decade or so, Meta has added features and promoted the use of auto-playing short videos and temporary posts on Facebook and Instagram, with the former being referred to as “Reels” while the latter is referred to as Instagram “Stories.”

10. Facebook and Instagram notify users through text and email of activity that might be of interest, which is designed to and does prompt users to open Facebook and Instagram and be

12. Plaintiff also brings claims for strict liability based on Defendants' failure to provide adequate warnings to minor users and their parents of the danger of mental, physical, and emotional harms arising from the foreseeable use of their social media products.

14. The addictive qualities of Defendants' products and their harmful algorithms are not fully known or appreciated by minor users or their parents. Like others, Plaintiff only recently learned the truth about Meta's increasingly detrimental effect on teenagers when Frances Haugen, a former Facebook employee turned whistleblower, came forward with internal documents showing that Meta was aware that its platforms and products cause significant harm to its users.

especially children. Rather than making meaningful changes to safeguard the health and safety of its adolescent users, Meta has consistently chosen to prioritize profit over safety by continuing to implement and require its users to submit to product components that increase the frequency and duration of users' engagement, resulting in the pernicious harms described in greater detail below.

## II. JURISDICTION AND VENUE

15. This Court has subject-matter jurisdiction over this case under 28 U.S.C. § 1332(a) because the amount in controversy exceeds \$75,000 and Plaintiff and Defendants are residents of different states.

16. This Court has specific personal jurisdiction over Defendants Facebook and Instagram because these Defendants transact business in the State of Illinois and purposely avail themselves of the benefits of transacting business with Illinois residents. Plaintiff's claims set forth herein arise out of and/or relate to Defendants' activities in the State of Illinois and purposeful availment of the benefits of transacting business here and the exercise of personal jurisdiction by this Court comports with traditional notions of fair play and substantial justice.

17. Defendants interface with a significant percentage of the population of the State of Illinois relating to use of the products at issue in this case, and interact extensively with—send messages, notifications, and communications to—and provide a myriad of other interactive services and recommendations to users Defendants expect and know to be in the State of Illinois.

18. Defendants advertise extensively in Illinois, through contractual relationships with third-party "partners" who advertise on their behalf via electronic and internet-based platforms and devices. Meta also has agreements with cell phone manufacturers and/or providers and/or retailers, who often pre-install its products on mobile devices prior to sale and without regard to the age of the intended user of each such device. That is, even though Defendants are prohibited from providing their products to users under the age of 13, by encouraging and allowing its product to

20. Venue is proper in this District under 28 U.S.C. § 1391(b)(2) because a substantial part of the events or omissions giving rise to Plaintiff's claims occurred in the Northern District of Illinois.

**Plaintiff**

**Defendant Meta Platforms, Inc.**

23. Meta develops and maintains social media platforms, communication platforms, and electronic devices. These platforms and products include Facebook (its self-titled app, Messenger, Messenger Kids, Marketplace, Workplace, etc.), Instagram (and its self-titled app), and a line of electronic virtual reality devices called Oculus Quest (soon to be renamed “Meta Quest”). Meta’s subsidiaries include, but may not be limited to: Facebook Holdings, LLC (Delaware); Facebook Operations, LLC (Delaware); Facebook Payments Inc. (Delaware); Facebook Technologies, LLC (Delaware); FCL Tech Limited (Ireland); Instagram, LLC (Delaware); Novi Financial, Inc. (Delaware); Runways Information Services Limited (Ireland); Scout Development LLC (Delaware); Siculus, Inc. (Delaware); and a dozen other entities whose identity or relevance is presently unclear.

### Subsidiary Defendants

24. Facebook Holdings, LLC (“Facebook 1”) was incorporated in Delaware on March 11, 2020, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 1 is primarily a holding company for entities involved in Meta’s supporting and international endeavors, and its principal place of business is in Menlo Park, California.

25. Facebook Operations, LLC (“Facebook 2”) was incorporated in Delaware on January 8, 2012, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 2 is likely a managing entity for Meta’s other subsidiaries, and its principal place of business is in Menlo Park, California.

26. Facebook Payments, Inc. (“Facebook 3”) was incorporated in Florida on December 10, 2010, and is a wholly owned subsidiary of Meta Platforms, Inc. Facebook 3 manages, secures, and processes payments made through Meta, among other activities, and its principal place of business is in Menlo Park, California.

27. Facebook Technologies, LLC (“Facebook 4”) was incorporated in Delaware as “Oculus VR, LLC” on March 21, 2014, and acquired by Meta on March 25, 2014. Facebook 4’s principal place of business is in Menlo Park, California, and it develops Meta’s virtual and augmented reality technology, such as the Oculus Quest line of products (soon to be renamed “Meta Quest”), among other technologies related to Meta’s various platforms.

28. Instagram, LLC (“Instagram”) was founded by Kevin Systrom and Mike Krieger in October 2010. In April 2021, Meta purchased the company for \$1 billion (later statements from Meta have indicated the purchase price was closer to \$2 billion). Meta reincorporated the company on April 7, 2012, in Delaware. Currently, the company’s principal place of business is in in Menlo Park, CA. Instagram is a social media platform tailored for photo and video sharing.

29. Siculus, Inc., (“Siculus”) was incorporated in Delaware on October 19, 2011 and is a wholly owned subsidiary of Meta. Siculus supports Meta platforms by constructing data facilities and other projects. Siculus’s principal place of business is in Menlo Park, CA.

#### IV. GENERAL FACTUAL ALLEGATIONS

##### A. Teenagers Are Particularly Vulnerable to the Perils of Excessive Social Media Use.

30. Emerging research shows that the human brain is still developing during adolescence in ways consistent with adolescents’ demonstrated psychosocial immaturity. Specifically, adolescents’ brains are not yet fully developed in regions related to risk evaluation, emotion regulation, and impulse control. The frontal lobes—and, in particular, the prefrontal cortex—of the brain play an essential part in higher-order cognitive functions, impulse control, and executive decision-making. These regions of the brain are central to the process of planning and decision-making, including the evaluation of future consequences and the weighing of risk and reward. They are also essential to the ability to control emotions and inhibit impulses. MRI studies have shown that the prefrontal cortex is one of the last regions of the brain to mature. During childhood and adolescence, the brain is maturing in at least two major ways. First, the brain undergoes myelination, the process through which the neural pathways connecting different parts of the brain become insulated with white fatty tissue called myelin. Second, during childhood and adolescence, the brain is undergoing “pruning”—the paring away of unused synapses, leading to more efficient neural connections. Through myelination and pruning, the brain’s frontal lobes change to help the brain work faster and more efficiently, improving the “executive” functions of the frontal lobes, including impulse control and risk evaluation. This shift in the brain’s composition continues throughout adolescence and into young adulthood. In late adolescence, important aspects of brain maturation remain incomplete, particularly those involving the brain’s executive functions and the coordinated activity of regions involved in emotion and cognition. As such, the part of the brain that is critical for control of impulses and emotions and mature,

considered decision-making is still developing during adolescence, consistent with the demonstrated behavioral and psychosocial immaturity of juveniles.

31. Because adolescence is the period when sophisticated, essential inhibitory control functions are being established, the onset of prolonged exposure to toxic content during adolescence is particularly concerning. The extended development of the prefrontal cortex results in an adolescent brain that is largely undeveloped, highly malleable, and overwhelmingly vulnerable to long-term, irremediable effects of adverse influences, including addiction and a fractured psychological well-being.

32. The algorithms in Defendants' social media products exploit minor users' diminished decision-making capacity, impulse control, emotional maturity, and psychological resiliency caused by users' incomplete brain development. Defendants know, or in the exercise of reasonable care should know, that because their minor users' frontal lobes are not fully developed, such users are much more likely to sustain serious physical and psychological harm through their social media use than adult users. Nevertheless, Defendants have failed to design their products with any protections to account for and ameliorate the psychosocial immaturity of their minor users.

33. Adolescents see themselves as increasingly unique. Paradoxically, as part of their individuation, they conform by faithfully mimicking the behavior of peers. Indeed, in defining their own emerging identity, adolescents aspire to be viewed as mature adults, and this leads them to affiliate with and emulate the personalities, images, behaviors, and preferences of those that they would like to become. During the teenage years, relationships with family members often take a back seat to peer groups and appearance. Teens crave to identify with their peer group, achieve social approval, and become "popular." Many teens feel deep insecurity and are self-conscious. They feel people are constantly focused on them, examining them, and judging them about everything they say and do. They struggle with the inexorable desire to be accepted and

admired by their teen peers, and their biggest fear is to not fit in. This myopic desire to fit in predispositions teenagers to frequently engage in upward social comparison processes, that is, identifying and observing others that appear to be experiencing more positive outcomes, and consequently feeling worse about themselves and their own perceived shortcomings.

34. Today's adolescents are part of Generation Z (which is loosely defined as people born between 1997 and 2012)—they are the first generation of consumers to have grown up in an entirely post-digital era, and thus are “digitally native.” The oldest members of this demographic cohort are just turning 24 this year; however, the substantial majority are believed to be still going through adolescence. Members of Generation Z spend upwards of 3 hours per day on the internet, and another 3 hours per day using social media. According to a 2018 survey by Pew Research Center, 45 percent of high school students said they used a social-media platform daily, and 24 percent said that they were online “almost constantly.”<sup>1</sup>

35. One way that Meta's platforms addict minors is as follows: When minors use design features such as “likes” it causes their brains to release euphoria-causing dopamine. However, as soon as dopamine is released, their euphoria is countered by dejection: minor users' brains adapt by reducing or “downregulating” the number of dopamine receptors that are stimulated. In normal stimulatory environments, neutrality is restored after this dejection abates. However, Defendants' algorithms are designed to exploit users' natural tendency to counteract dejection by going back to the source of pleasure for another dose of euphoria.

36. Eventually, as this pattern continues over a period of days, weeks, and months, the neurological baseline to trigger minor users' dopamine responses increases. Minors then continue to use Facebook and Instagram, not for enjoyment, but simply to feel normal. When minor users
